TABSAN EDUSPHERE

User Manual

Campus Portal for Universities, Colleges and Schools

Version 1.6 · 25 October 2026

Tabsan Nexora — Building the Next Era of Software

About This Manual

This manual describes Tabsan EduSphere as installed from the main branch on 25 October 2026, including single sign-on, the online learning features (course modules, quizzes and question banks, the grading workspace, peer review, similarity checking, learning outcomes, live classes, external tools and SCORM packages), languages, phone notifications and the integration settings. Screenshots were captured from the live application using the demonstration data set.

Item	Detail
Product	Tabsan EduSphere Campus Portal
Document	User Manual
Version	1.6
Date	25 October 2026
Audience	SuperAdmin, Admin, Faculty, Student and Finance users
Publisher	Tabsan Nexora

> **NOTE** Screens may differ slightly from these screenshots depending on your role, your institution type, the theme you choose and which modules your administrator has enabled.

1 Introduction

Tabsan EduSphere is a web-based campus management portal for universities, colleges and schools. It brings the everyday work of an institution into one secure place: departments, programs, courses, enrolments, timetables, attendance, assessments, results, graduation, certificates, fee receipts, reports and support tickets.

It is also a complete online learning system: course modules with completion requirements, quizzes with question banks and many question types, a grading workspace, peer review and student groups, similarity checking, learning outcomes and mastery, live online classes, external learning tools (LTI 1.3) and SCORM packages. People can sign in with their institution account (single sign-on), use the portal in English, Urdu or Arabic, install it as an app and receive notifications on their phones.

Everyone uses the same portal. What each person sees depends on their role: an administrator sees setup and management pages, a teacher sees their classes, a student sees their own records, and the finance office sees fee receipts.

This manual explains every screen in the portal step by step, with screenshots taken from a running installation. You do not need to read it from start to finish. Use the Contents page or the Index at the back to jump to the task you need.

1.1 Who should read this manual

The manual is written for everyone who signs in to the portal. Each section begins with an "Available to" line, so you can quickly see whether it applies to you.

- **SuperAdmin** – the platform owner. Manages the product license, tenants and campuses, which modules are switched on, which menus each role sees, portal branding, the institution policy and the Admin accounts, and connects the portal to other systems (single sign-on, external tools, live class and similarity services, languages, the learning record store).
- **Admin** – institution administrators. Set up departments, programs, courses, students and timetables, and manage results, graduation, certificates, user accounts, fee receipts, learning outcomes and reports for their departments.
- **Faculty** – teachers. Work with their own classes: timetable, assignments, attendance, marks, gradebook, rubrics, quizzes and question banks, course modules, live classes, external tools, SCORM packages, outcomes, final year project supervision and announcements.
- **Student** – learners. Follow their course modules, hand in assignments, take quizzes, join live classes, review classmates' work, see their attendance, results and outcomes, check their degree progress and apply for graduation.
- **Finance** – finance office staff. Issue and confirm fee receipts and run the payment report.

1.2 How this manual is organised

Chapters follow the order in which an institution normally works: first the concepts and sign-in, then academic setup, then teaching and assessment, then progression and graduation, and finally reports, finance, accounts and SuperAdmin administration.

- Chapter 2 explains the terms used throughout the portal. Read it once if you are new.
- Chapter 3 covers signing in (including single sign-on), choosing your language, finding your way around, using the portal on a phone and signing out.
- Chapter 4 is a quick start for each role: the handful of pages you will use most.
- Chapters 5 to 16 describe each screen in detail: what it is for, what you need before you start, the steps, the fields, what happens afterwards and useful tips. Chapter 7 covers teaching and online course content, Chapter 8 quizzes and assignment marking, Chapter 9 learning outcomes, and Chapter 16 the integrations a SuperAdmin sets up.
- Chapter 17 answers common questions. Appendix A shows which menus each role can see, and Appendix B is a glossary.

1.3 User roles at a glance

Each user account has exactly one role. The role decides which menus appear in the sidebar and which actions the portal allows. If you need something your role cannot do, ask an Admin or SuperAdmin; they can either do it for you or, where appropriate, change your access.

Role	Scope	Typical work
SuperAdmin	Whole installation, all tenants	License, tenants and campuses, module composition, sidebar visibility, branding, institution policy, Admin accounts, audit logs, single sign-on, external tools, integrations and languages
Admin	One tenant; only the departments assigned to them	Departments, programs, courses, enrolments, students, timetables, attendance, results, graduation, certificates, user import, payments, learning outcomes, API tokens, reports
Faculty	The departments and classes they teach	Teacher timetable, assignments and grading, attendance, results, gradebook, rubrics, quizzes and question banks, course modules, live classes, external tools, SCORM, outcomes, FYP, announcements
Student	Their own records	Course modules, assignments and peer review, quizzes, live classes, course material, attendance, results, outcomes, degree audit, graduation application
Finance	Fee receipts	Payments, payment summary report, analytics

© 2026 Tabsan Nexora. All rights reserved.

1.4 Accounts used in this manual

The screenshots were captured with the demonstration accounts below. All demo accounts use the password EduSphere147. These accounts exist only in the demonstration data; change or remove them before the portal is used with real students.

Username	Role	Notes
superadmin	SuperAdmin	Full platform access, including license and tenant management.
testadmin	Admin	Testing account with every right except SuperAdmin. Works in the University tenant and is assigned to all of its departments. Created by Scripts/08-Create-Test-Admin-User.sql.
faculty.it1	Faculty	A teacher in the Information Technology department.
bscs8s1 … bscs8s5	Student	Computer Science students in semester 8, also enrolled in CS702 Machine Learning, the course used for the online-learning screenshots.
finance1	Finance	A finance officer.
admin.sch / admin.col / admin.uni	Admin	The School, College and University administrators. Each sees only its own institute's departments, so no Institute filter is shown to them.
faculty.sch3 / faculty.col3 / faculty.eco1	Faculty	Teachers in the School Arts & Humanities, College Pre-Medical and University Economics departments.

> **NOTE** Every account other than SuperAdmin belongs to one tenant (for example University, College or School). Only SuperAdmin can see data across tenants.

1.5 Conventions used in this manual

- Menu names, buttons and field labels are shown in **bold**, for example **Departments** > **Add Department**.
- Numbered lists are procedures: follow the steps in order.
- "Fields and options" tables explain each box or list on a form.
- "What happens next" explains the result of an action, and "Good to know" lists tips and limits.
- NOTE boxes add context, TIP boxes suggest a faster way, and IMPORTANT boxes warn about actions that change data or access.
- Fields marked with a red asterisk (*) in the portal are required; the portal will not save the form until they are filled in.

© 2026 Tabsan Nexora. All rights reserved.

2 Key Concepts

The portal uses a few terms consistently on every page. Understanding them makes the filters and forms much easier to follow.

2.1 How the academic structure fits together

Information in the portal is organised from the broadest level to the most specific. Most pages ask you to choose these levels in order, from left to right, before they show any data. Each choice narrows the next list.

Level	What it means	Example
Tenant	A separate institution in the installation, with its own users and data.	University, College, School
Campus	A physical site of a tenant.	UNI-1 (main campus)
Department	An academic unit. Belongs to one institution type.	Information Technology
Program	A degree or course of study offered by a department.	BS Computer Science
Semester / Class	A level within a program: semesters for University, classes for School and College.	Semester 4, Class 11
Course (subject)	A subject with a code, title and credit hours.	CS101 Introduction to Programming
Offering	A course taught in a particular semester or class, usually by one teacher. Students enrol in offerings.	CS101, BSCS Semester 1

Good to know

- If a list looks empty, check the filters at the top of the page first. Most pages show nothing until a department and an offering are chosen.
- Admins only see the departments assigned to them. Faculty only see the departments and classes they teach.

2.2 Institution types

Each department belongs to one institution type, and the type changes how progression and results work.

Type	Levels	Results	Demo departments
University	Semesters 1 to 8 (depending on the program); final year project in the last semester	Grades and GPA / CGPA	Information Technology, Business Administration, Economics, Spanish Language
College	Class 11 and Class 12	Percentage based	Information Technology, Pre-Medical, Pre-Engineering, Commerce (College)
School	Class 1 to Class 10	Percentage based	Science Department, Arts & Humanities, Commerce (Class 9-10)

© 2026 Tabsan Nexora. All rights reserved.

> **NOTE** Degree audit, degree rules, graduation applications, FYP and the GPA & CGPA report apply to University departments only.

2.3 Online learning terms

The online learning pages add a few more terms. Each is explained in detail in Chapters 7 to 9.

Term	What it means
Module	A unit of a course, usually one week or topic, that holds items in the order students should follow them.
Item and requirement	Anything in a module (a page, link, file, video, assignment, quiz, discussion, external tool or SCORM package), with what a student must do to complete it: view it, mark it done, submit it, score at least a percentage or post in it.
Question bank	A reusable pool of quiz questions. A quiz can draw a number of questions from a bank at random, so each student gets a different set.
Grading workspace	The page where a teacher marks submissions one after another: the work, annotations, rubric, marks, comments, similarity score and peer reviews side by side.
Group set	A way of splitting a class into groups (for example project teams). A group assignment is handed in once per group.
Peer review	Students review a number of classmates' work, usually anonymously, with the assignment's rubric or a score and a comment.
Similarity score	How much of a submission matches other work, from 0% to 100%. A prompt to look closer, not proof of copying.
Learning outcome	A statement of what students should be able to do: program outcomes (PLOs) and course outcomes (CLOs). Graded work aligned to an outcome shows each student's mastery of it.
Live class	A scheduled online class with a join link; joining through the portal can record attendance automatically.
External tool (LTI)	Another learning application (for example an interactive-content or video tool) opened from a course without a second sign-in, which can send grades back.
SCORM package	An interactive lesson exported from an authoring tool as a zip file. It runs inside the portal and reports progress, scores and time.

2.4 Statuses you will see

Many lists show a coloured status badge. The most common ones are:

- **Active / Inactive** – inactive records are kept for history but no longer used. Most lists hide them unless you tick a "Show inactive" option.
- **Published** – results and assignments become visible to students only once published.

© 2026 Tabsan Nexora. All rights reserved.

- **Pending / Approved / Rejected** – used for requests that need someone else to act, such as graduation applications, study plans and result changes.

2.5 Security and your session

- Your session ends automatically after a period of inactivity set by your administrator. Sign in again to continue; unsaved changes on the open page are lost.
- Passwords must be at least 8 characters and different from your previous password. Passwords expire after 90 days by default, and the portal asks you to choose a new one.
- New accounts start with a temporary password (the username) and must choose a new password at first sign-in.
- Two-factor authentication adds a 6-digit code from an authenticator app to sign-in (see Two-Factor Authentication).
- Your institution may let you sign in with its own account (Microsoft, Google or another single sign-on service) instead of an EduSphere password. It may also require it, in which case password sign-in is turned off for your account.
- Every sign-in and every important change is recorded in the audit log, including how you signed in (password or single sign-on).

© 2026 Tabsan Nexora. All rights reserved.

3 Getting Started

This chapter covers signing in, finding your way around the portal, and signing out.

3.1 Opening the portal and signing in

Open the portal address supplied by your administrator in a current browser such as Microsoft Edge, Google Chrome, Mozilla Firefox or Safari. The portal works on desktop computers, tablets and phones.

Before you start

- You need a username and password from your administrator. Students and staff usually receive them by email. If your institution uses single sign-on, you can use your institution account instead (see the next section).
- If two-factor authentication is switched on for your account, have your authenticator app ready.

Procedure

1. Open the portal address. The **Sign in to your account** page appears. To use the portal in Urdu or Arabic, choose the language in the box above the form first.
2. Enter your **Username** and **Password**. Click the eye icon to show or hide the password while you type.
3. Click **Sign In**.
4. If two-factor authentication is enabled on your account, enter the 6-digit code from your authenticator app when prompted.
5. If this is your first sign-in, or your password has expired, the portal asks you to choose a new password before continuing.
6. The portal opens. SuperAdmin users land on the Dashboard; all other users land on the Helpdesk ticket queue, and the sidebar shows their menus.

© 2026 Tabsan Nexora. All rights reserved.

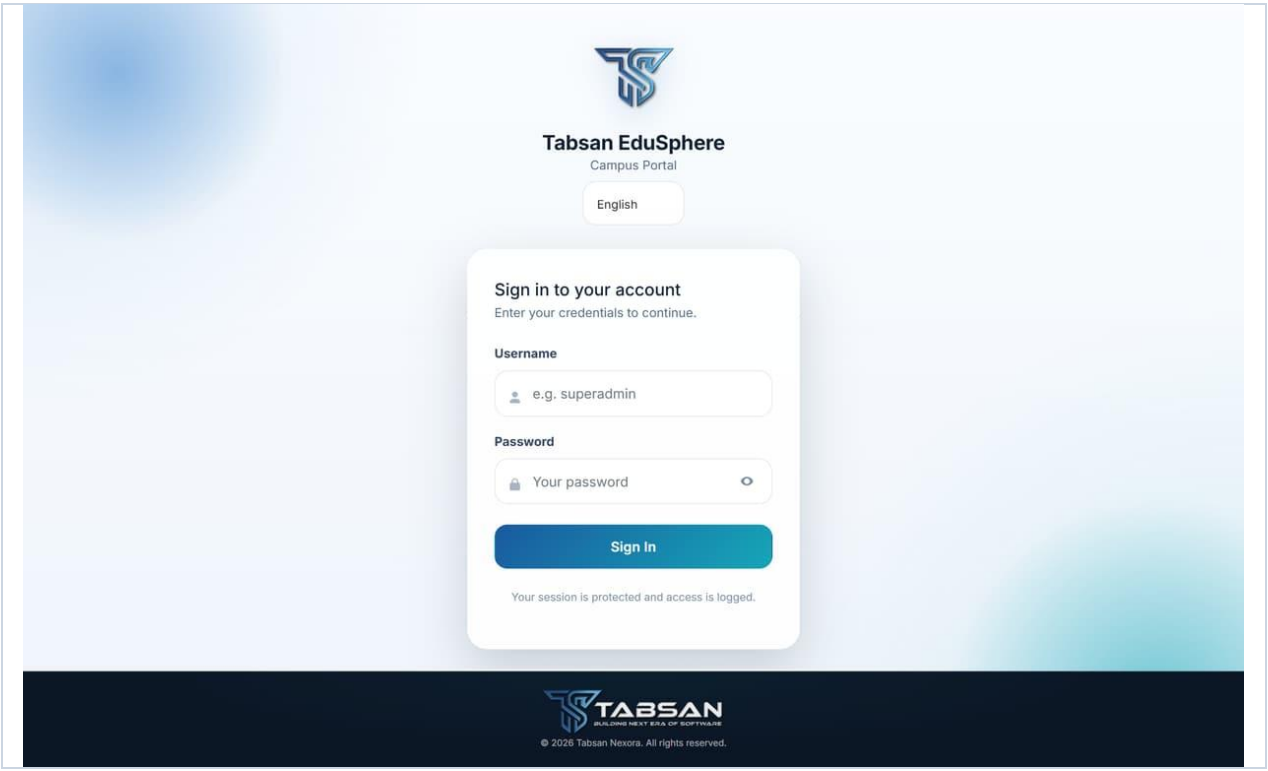

Figure 3.1 *The sign-in page*

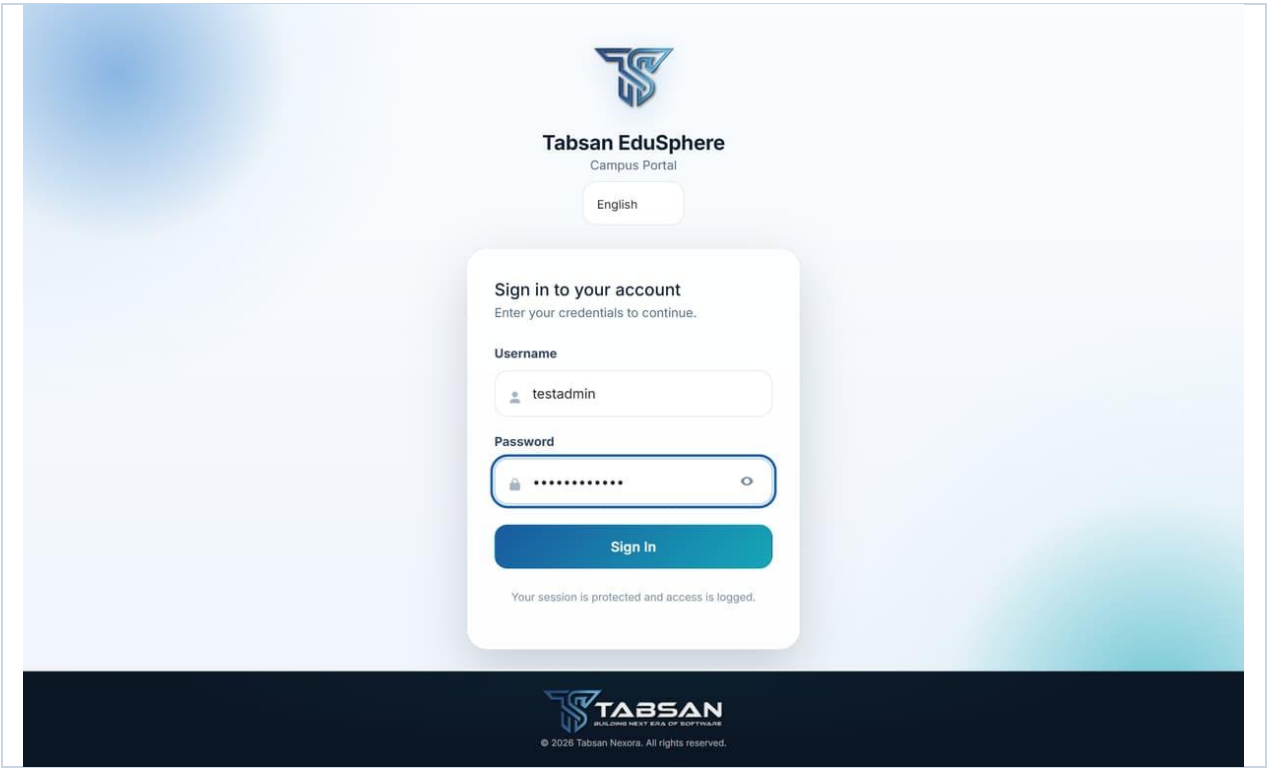

Figure 3.2 *Sign-in page with credentials entered*

© 2026 Tabsan Nexora. All rights reserved.

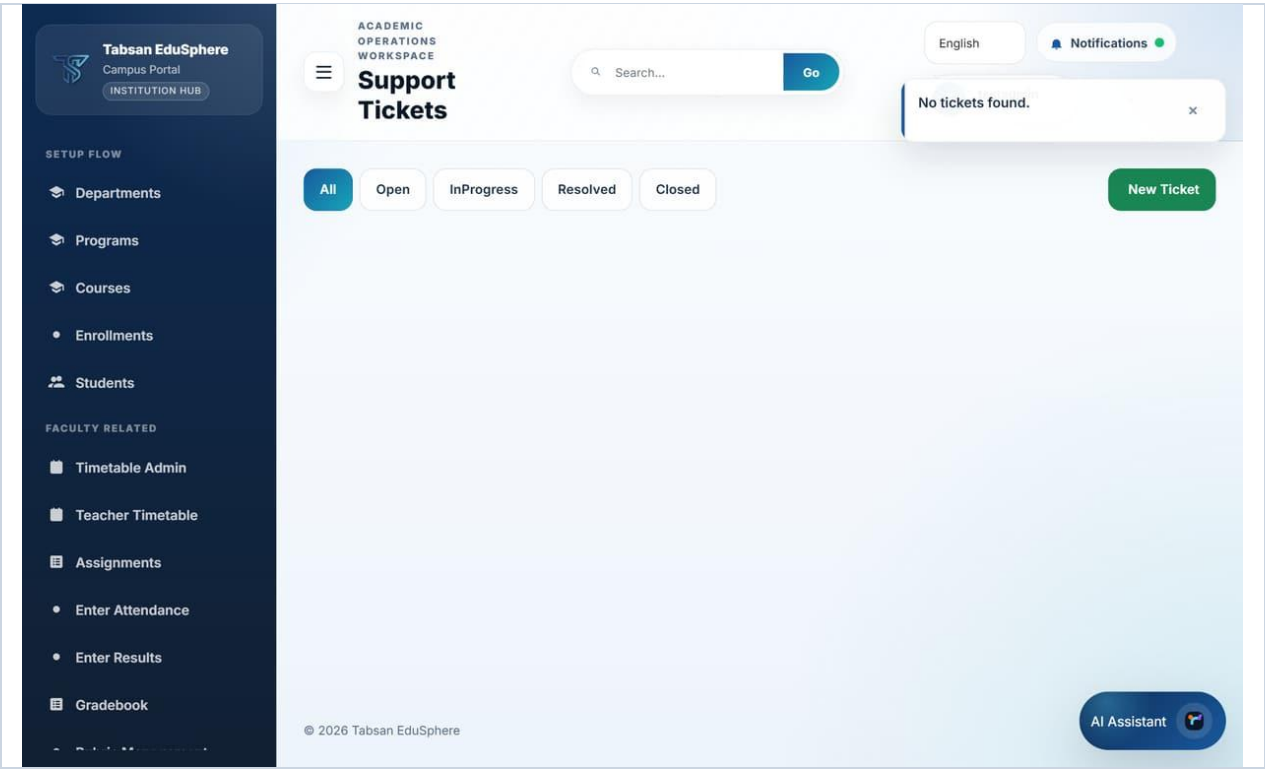

Figure 3.3 *Landing page after signing in (Admin)*

Good to know

- After several failed attempts the account may be blocked for security reasons. Ask your administrator to check the account rather than trying repeatedly.
- Do not let your browser save your password on a shared or public computer.

3.2 Signing in with your institution account (single sign-on)

When your institution has connected its identity provider (for example Microsoft Entra ID, Google Workspace or another OpenID Connect or SAML 2.0 service), the sign-in page shows a button for it below the password form. You then sign in with the same account you use for your institution's email, and you do not need a separate EduSphere password.

Institutions with several tenants give each one its own sign-in address, ending in **?tenant=** and the tenant code; the buttons appear on that address.

Procedure

1. Open the sign-in address your institution gave you and click the button for your institution, for example **Sign in with Microsoft**.
2. Your institution's own sign-in page opens. Sign in there as usual (with its own multi-factor check, if it uses one).
3. You return to EduSphere and the portal opens. The first time, EduSphere finds your existing account by your verified email address or your institution ID (registration number or staff username), depending on how your administrator set it up.

© 2026 Tabsan Nexora. All rights reserved.

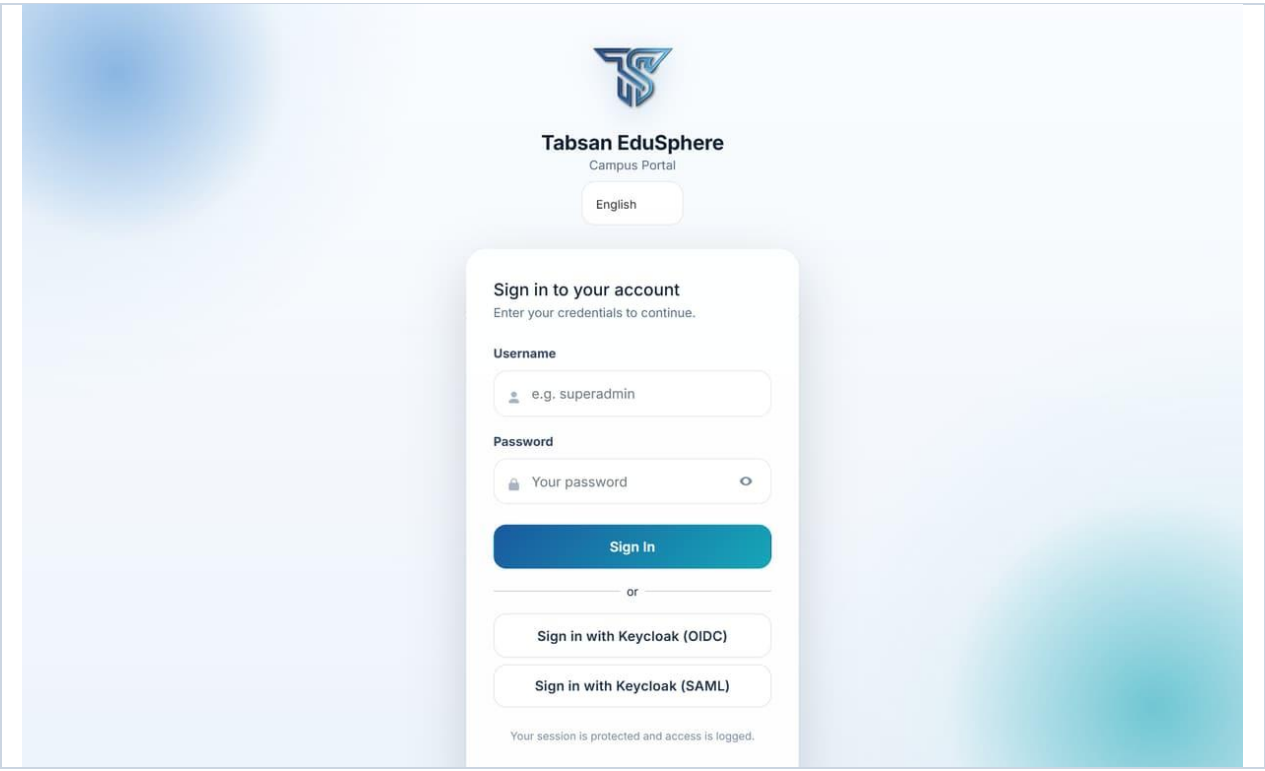

Figure 3.4 *Sign-in page with single sign-on buttons*

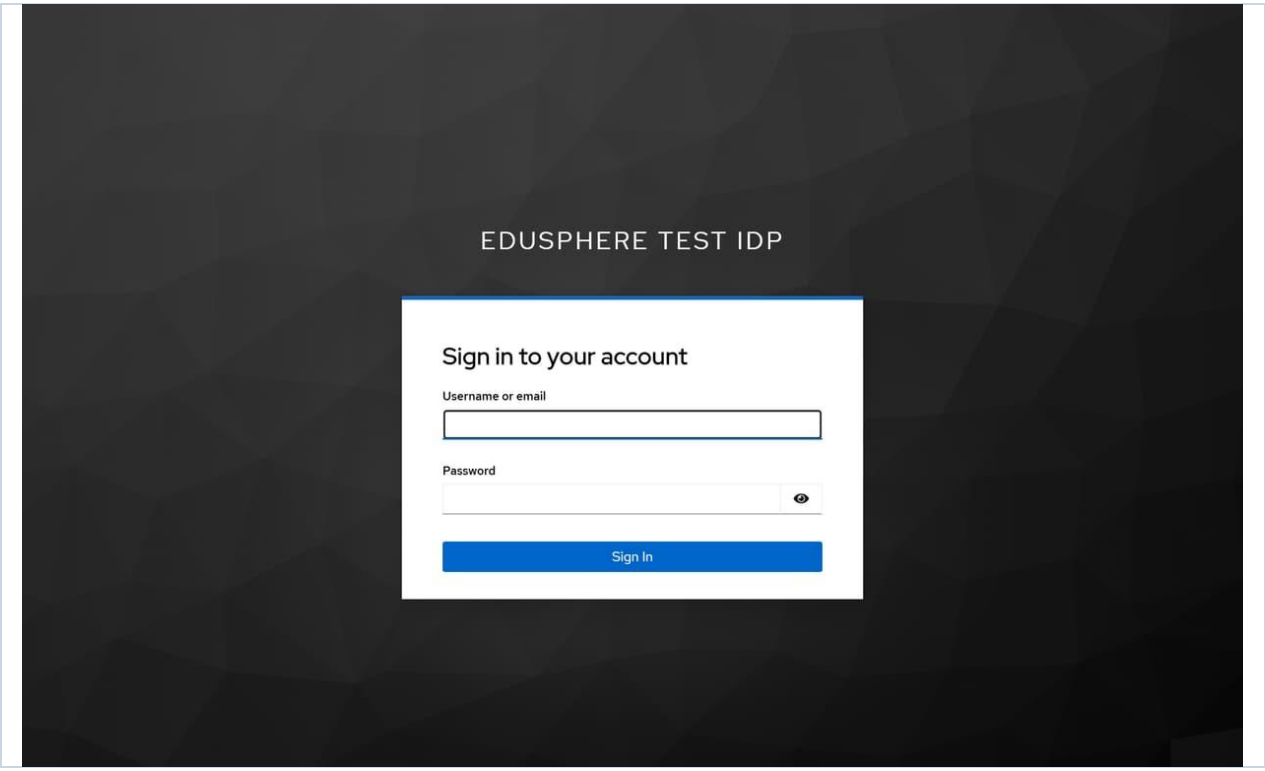

Figure 3.5 *The institution's own sign-in page (a test identity provider in this example)*

What happens next

EduSphere remembers the link between your institution account and your EduSphere account. You can see and remove links under **Two-Factor Authentication** > **Linked sign-in accounts** (Chapter 14).

© 2026 Tabsan Nexora. All rights reserved.

Good to know

- Single sign-on never creates new EduSphere accounts. If you see "This account is not linked to an EduSphere user", sign in with your username and password once, or ask your administrator.
- If you see a message that your identity provider reports a role that does not match your account, your institution's directory lists you differently (for example as a student when your EduSphere account is staff). Contact your administrator.
- SuperAdmin accounts always sign in with a password and two-factor authentication.

3.3 Choosing your language

The portal is available in English, Urdu (اردو) and Arabic (العربية). Choose a language in the language box in the top bar of every page, or above the sign-in form. Menus, pages, buttons and messages switch at once, and for Urdu and Arabic the whole layout runs from right to left.

Your choice is saved to your account, so it follows you to other computers and to the mobile app. Emails and PDF reports from the portal also use your language; official certificates keep the language of their template.

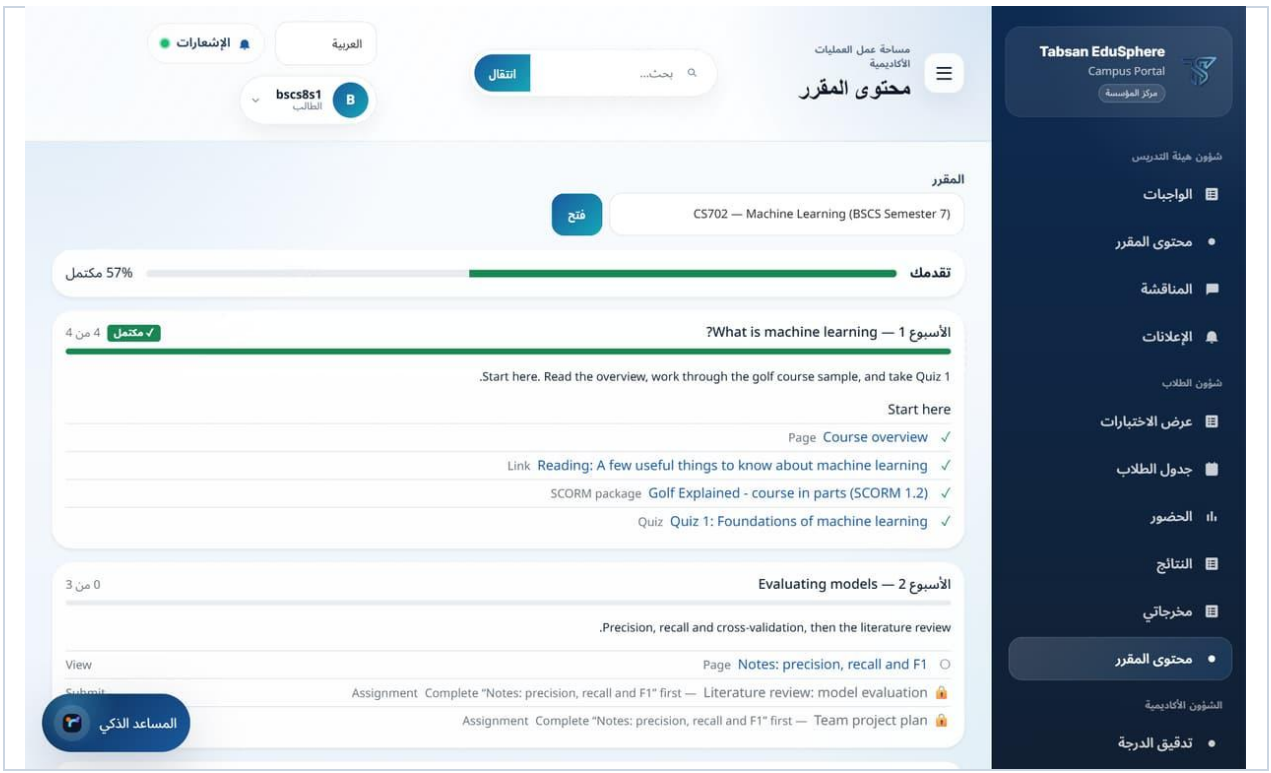

Figure 3.6 *A course page in Arabic, laid out right to left*

© 2026 Tabsan Nexora. All rights reserved.

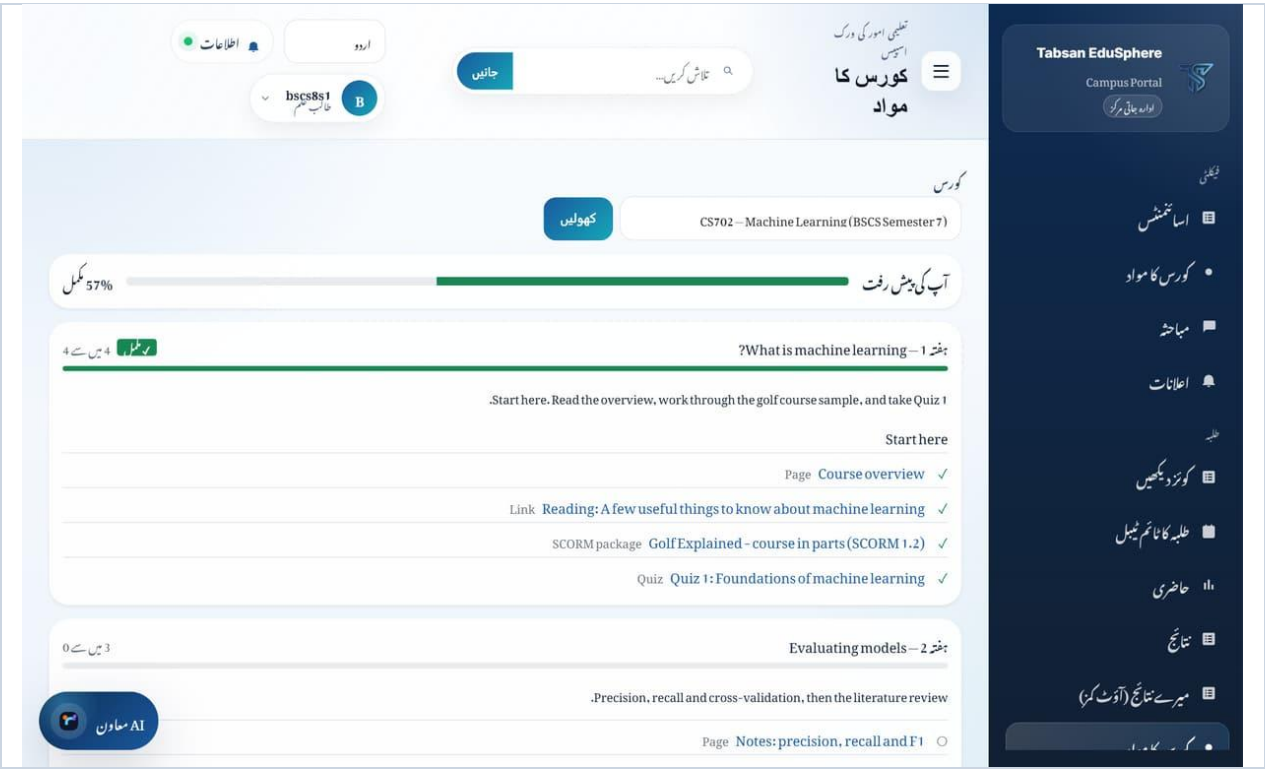

Figure 3.7 *The same page in Urdu*

Good to know

- Dates and numbers you type in forms work the same in every language.
- A SuperAdmin chooses the default language for people who have not chosen one, and can improve the translations (Chapter 16).

3.4 The portal layout

Every page shares the same layout, so once you know one page you know them all.

- **Sidebar** (left) – the menus your role can use, grouped into sections: Overview, Setup Flow, Faculty Related, Student Related, Academic Related, Settings Related and Financial Related. The highlighted item is the current page. Click the menu button (three lines) to collapse the sidebar to icons and give the page more room.
- **Page header** – the page title and the workspace name.
- **Search** – type part of a page or feature name, such as "attendance", and click **Go** to jump straight to it.
- **Language** – switches the portal between English, Urdu and Arabic.
- **Notifications** – opens your notification inbox. A green dot means you have unread notifications.
- **Live now banner** – while one of your live classes is running, a banner with a **Join** button appears at the top of every page.
- **Profile chip** (top right) – shows your username and role; click it to open the profile menu.
- **AI Assistant** (bottom right) – a chat assistant that answers questions about using the portal, when the AI module is switched on.

© 2026 Tabsan Nexora. All rights reserved.

- **Messages** – after you save something, a short message appears at the top right confirming success or explaining a problem. It closes by itself, or click × to close it.

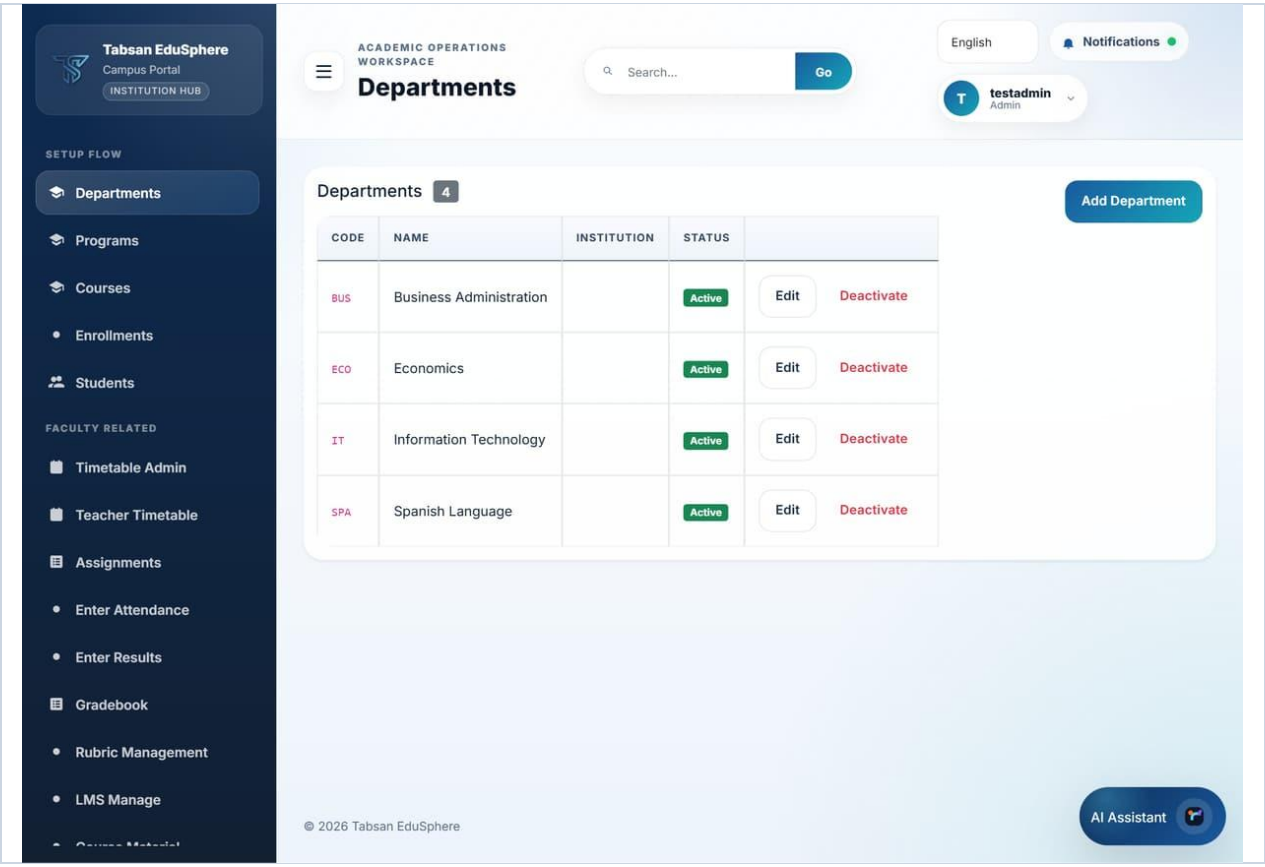

Figure 3.8 *Portal layout: sidebar, header, search, notifications and profile*

3.5 Using filters and lists

Most pages start with a row of filters, such as Institute, Campus, Department, Course and Offering. Choose them from left to right; each choice refreshes the next list and the data below.

The **Institute** filter (University, School or College) appears for users who can see more than one type of institution, such as SuperAdmin. Choosing an institute limits every list and drop-down on the page to it: only that institute's departments, programs, courses, classes or semesters and students are offered. Switching institute clears the department, course and other choices made for the previous one. Users who belong to a single institute do not see this filter; they only ever see their own institute's data.

Tables can be long. Use the browser's find feature (Ctrl+F, or Cmd+F on a Mac) to locate a name quickly, or narrow the filters.

© 2026 Tabsan Nexora. All rights reserved.

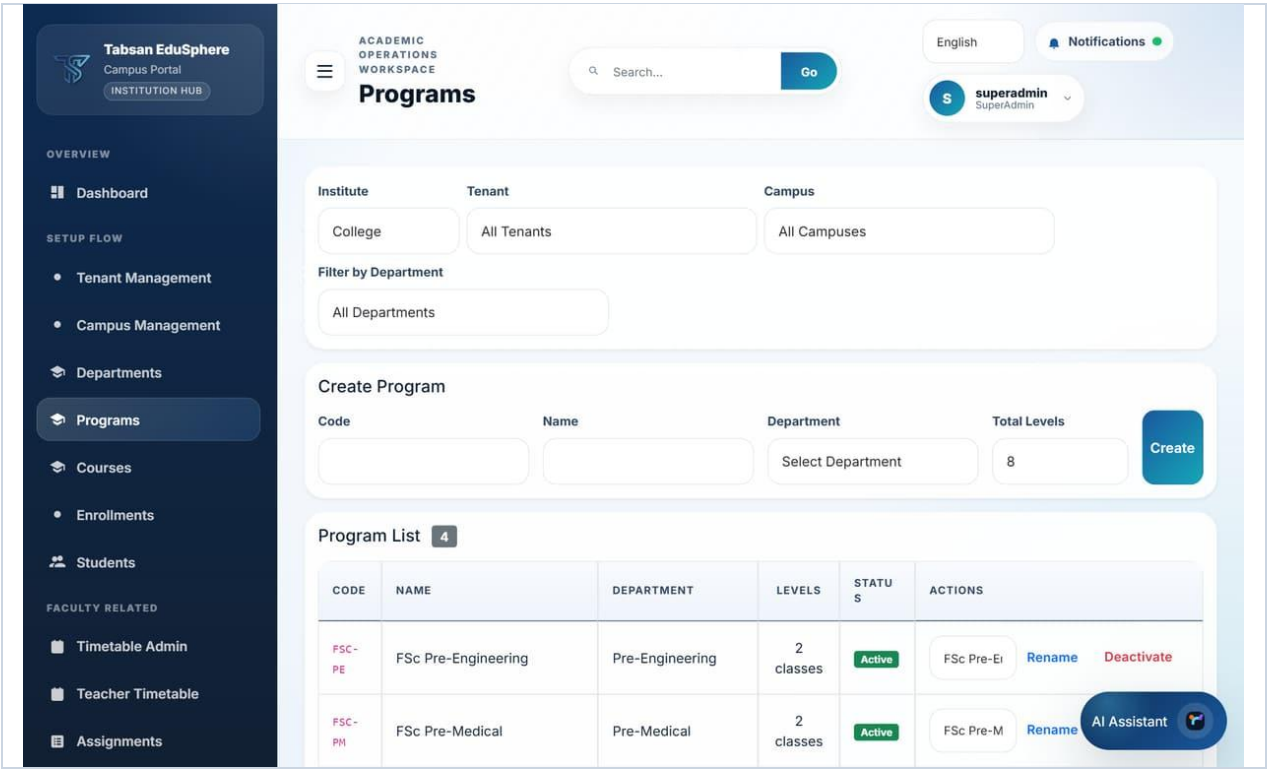

Figure 3.9 *Programs with the Institute filter set to College*

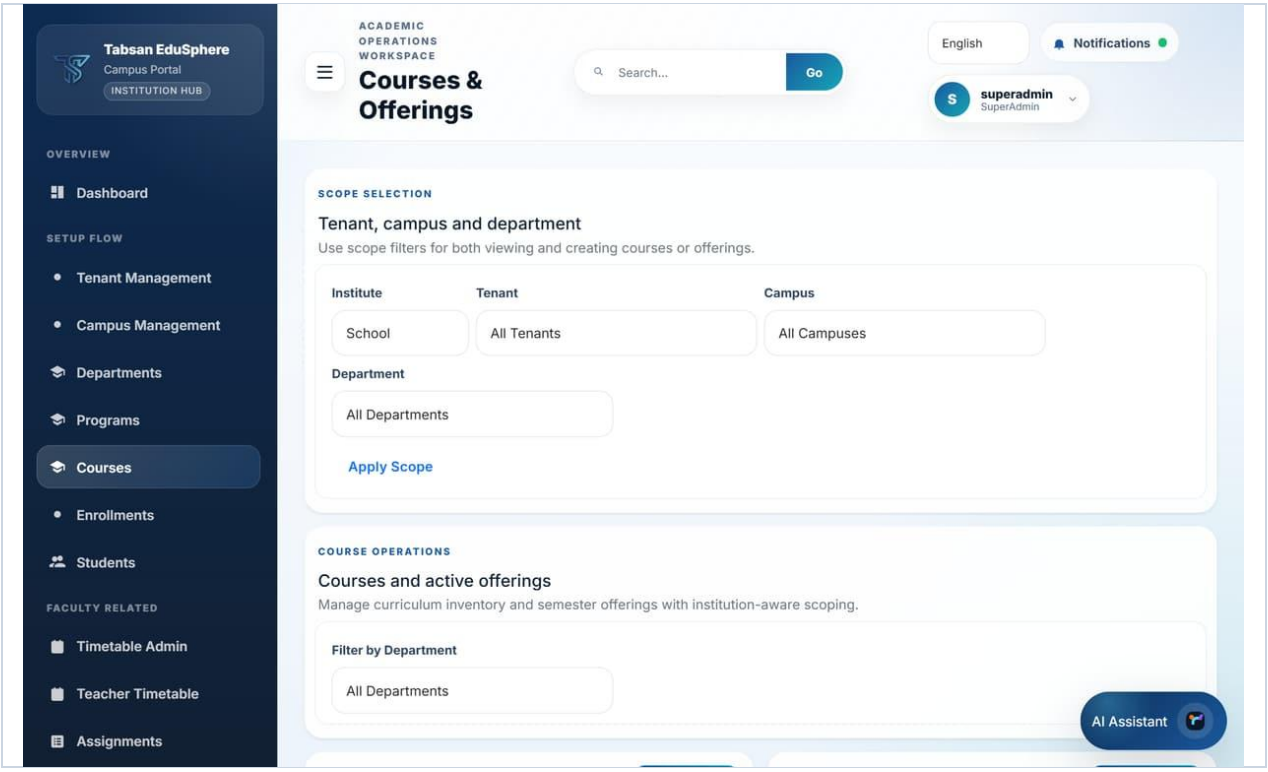

Figure 3.10 *Courses with the Institute filter set to School*

Good to know

- Your last choices are kept in the address bar, so you can bookmark a filtered page or send the link to a colleague with the same access.
- Buttons that change data, such as Deactivate or Delete, ask you to confirm first.

© 2026 Tabsan Nexora. All rights reserved.

3.6 Profile menu and signing out

Procedure

1. Click your name in the top-right corner.
2. Choose **View Notifications**, **User Settings** or **Two-Factor Authentication** to open those pages, or **Install the EduSphere app** where your browser supports it.
3. Click **Sign Out** to end your session.

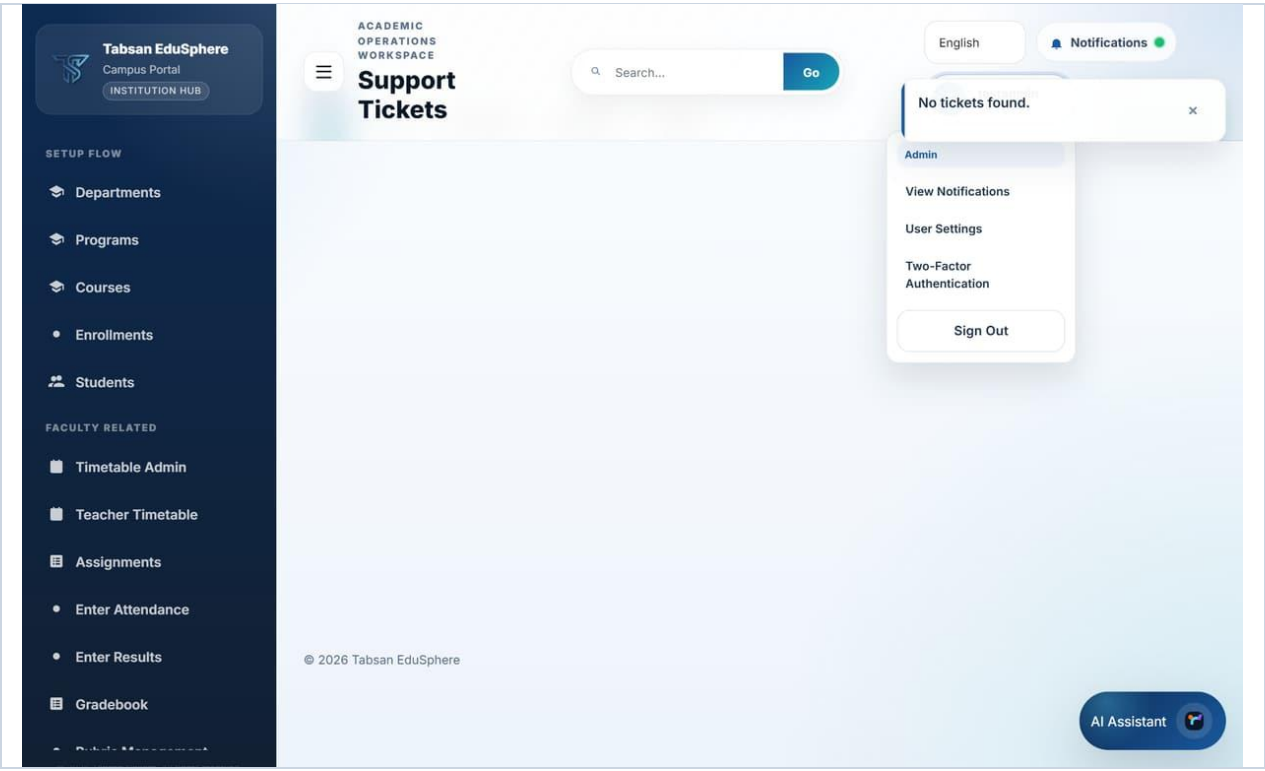

Figure 3.11 *The profile menu*

> **IMPORTANT** Always sign out on a shared computer. Closing the browser tab alone may leave your session open until it times out. Signing out also removes pages saved for offline reading and stops notifications on that device.

3.7 Installing EduSphere and getting notifications on your devices

The portal can be installed like an app on a phone, tablet or computer, and can send notifications (new work, results, announcements, live classes) to the device even when the portal is closed. The portal must be on a secure (https) address for both.

Procedure

1. Android, Windows or Mac (Chrome or Edge): open the profile menu and choose **Install the EduSphere app**, or use the install icon in the browser's address bar. An EduSphere icon appears with your other apps.

© 2026 Tabsan Nexora. All rights reserved.

2. iPhone or iPad (iOS 16.4 or later): open the portal in Safari, tap **Share** > **Add to Home Screen**, and from then on open EduSphere from its Home Screen icon (notifications only work there).
3. Open **Notifications**. Under **Notifications on this device**, click **Turn on** and allow notifications when the browser asks.
4. Tick the kinds of notification you want on this device, and click **Send a test** to check that it arrives.

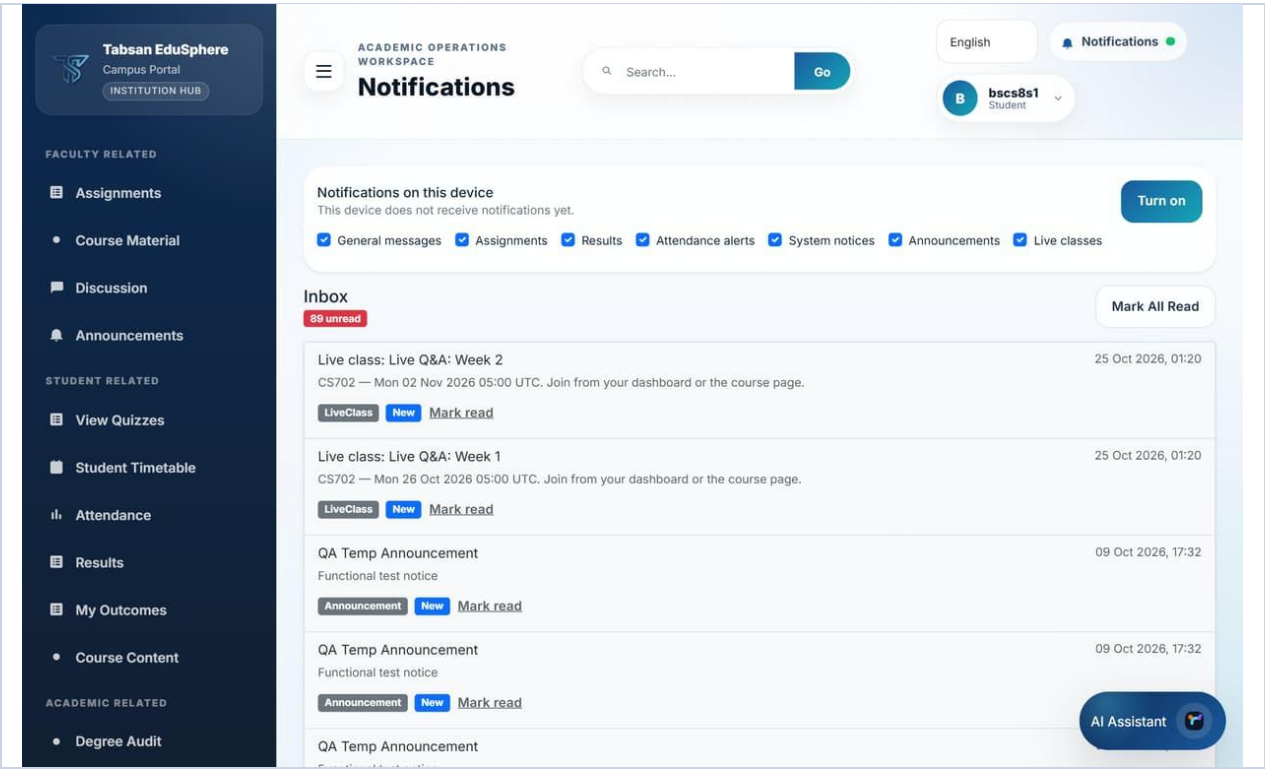

Figure 3.12 *Notifications on this device, and the notification inbox*

Good to know

- Pages you opened recently, such as the dashboard, timetable, announcements, course material and notifications, can still be read while you are offline. Anything that changes data needs a connection.
- **Turn off** stops notifications on that device only. Notifications always remain in your inbox in the portal.

3.8 The EduSphere mobile app

Your institution may also offer the EduSphere mobile app for Android and iPhone, from the store link it provides. Sign in with your usual username and password (and authenticator code), or with your institution's sign-in button, which opens the phone's browser and returns to the app.

- **Students** see today's classes, what is due, courses and materials, results, attendance and report cards, and hand in assignments with a photo or a file. Quizzes open in the portal.
- **Teachers** take attendance (tap a student to switch present, absent, late or excused), grade hand-ins, post announcements and talk with the class in discussions. Home shows today's classes and how much work waits for grading.

© 2026 Tabsan Nexora. All rights reserved.

- **Parents** see only the children linked to them: timetable, attendance, results and announcements.
- Choose the language and turn notifications on under **Settings** in the app. If the app asks you to update, install the newer version from the store.

3.9 Accessibility

The portal is designed to meet the WCAG 2.1 AA accessibility guidelines and passes automated accessibility checks.

- Every page works with the keyboard alone. Press **Tab** on any page to reveal the **Skip to main content** link, and use **Tab** / **Shift+Tab** to move between controls.
- Pages have proper headings, labelled form fields and descriptive buttons for screen readers, and messages are announced when they appear.
- Text and controls keep readable contrast in every built-in theme, and pages can be zoomed to 200% without losing content.
- If something is hard to use with your assistive technology, tell your institution through the Helpdesk so it can be fixed.

> **NOTE** Custom branding colours chosen by an institution are not covered by these checks. SuperAdmins should check contrast after changing them.

3.10 Access messages and read-only mode

If you open a page your role cannot use (for example from an old bookmark), the portal returns you to your landing page with a short message explaining why. Nothing is changed. Ask your administrator if you believe you need access.

> **IMPORTANT** If the product license is missing, expired or invalid, the portal switches to read-only mode: you can still view information, but saving, creating and deleting are blocked until a SuperAdmin uploads a valid license (see License Update).

© 2026 Tabsan Nexora. All rights reserved.

4 Quick Start by Role

This chapter lists the pages each role uses most, in the order they are usually needed. Each item points to the chapter that explains it in detail.

4.1 Admin: setting up a new term

Available to: Admin, SuperAdmin

Follow this order when preparing a new semester or school year. Each step depends on the one before it.

Procedure

1. Check that your **Departments** and **Programs** exist (Chapter 5).
2. Add any new **Courses**, then create an **offering** for each course you will teach this term and choose the teacher (Chapter 5).
3. Create **Buildings** and **Rooms** if they are new, then build the class **timetables** in Timetable Admin (Chapter 6).
4. Create accounts for new students and staff in **User Import** (Chapter 14), or connect single sign-on so they use their institution accounts (Chapter 16).
5. Enrol students in **Enrollments** (Chapter 5): choose the department and class or semester, tick the courses and students, and enroll them all at once.
6. Check **Result Calculation** and **Grading Config** so marks become grades correctly (Chapter 10), and set up program outcomes in **Learning Outcomes** if you report on them (Chapter 9).
7. At the end of the term, publish results, then promote students in **Student Lifecycle** (Chapter 10).

4.2 Faculty: a typical week

Available to: Faculty

- Check your classes in **Teacher Timetable** (Chapter 6) and schedule online sessions in **Live Classes** (Chapter 7).
- Take attendance after each class in **Enter Attendance** (Chapter 7).
- Build the week's module in **LMS Manage** – pages, links, files, assignments, quizzes, external tools and SCORM packages, with what students must do to complete each (Chapter 7) – and post notices in **Announcements**.
- Create **Quizzes** from your question banks, and mark **Assignments** in the grading workspace (Chapter 8).
- Check **Module Progress** and the outcome **Mastery gradebook** to see who needs help (Chapters 7 and 9).
- Enter marks in **Enter Results** and review them in the **Gradebook** (Chapter 7).

© 2026 Tabsan Nexora. All rights reserved.

- Answer questions in **Discussion** and, for final-year students, supervise projects in **FYP** (Chapters 7 and 10).

4.3 Student: finding your information

Available to: Student

- **Student Timetable** and **Live Classes** – when and where your classes are, and how to join online ones (Chapters 6 and 7).
- **Course Content** – each course's modules, what you must do next, and your progress (Chapter 7).
- **Assignments** and **View Quizzes** – what is due, how to hand in, peer reviews to do and your feedback (Chapter 8).
- **Course Material** and **Announcements** – notes, files and notices from your teachers (Chapter 7).
- **Attendance** – your attendance percentage for each course (Chapter 7).
- **Results** and **My Outcomes** – your published marks and grades, and how well you have mastered each outcome (Chapters 9 and 10).
- **Degree Audit** and **Graduation Apply** – your progress towards your degree (Chapter 11).
- **Helpdesk** – ask for help from the institution (Chapter 14).

4.4 Finance: managing fees

Available to: Finance

- Create a fee receipt for each student in **Payments**, or import many at once from a CSV file (Chapter 13).
- Confirm receipts when payment arrives, and cancel any issued in error (Chapter 13).
- Run **Report Center** > **Payment Summary** for totals by status (Chapter 12).

© 2026 Tabsan Nexora. All rights reserved.

5 Academic Setup

Academic setup follows the order shown in the Setup Flow menu: departments first, then programs, then courses and their offerings, and finally enrolments. Each level depends on the one before it: a program needs a department, an offering needs a course, and an enrolment needs an offering.

Students are created in User Import (Chapter 14) and then appear in the Students list.

5.1 Departments

Available to: SuperAdmin, Admin

Departments are the top level of the academic structure, such as Information Technology or Business Administration. Every program, course, teacher and student belongs to a department, and Admins manage only the departments assigned to them.

The list shows each department's code, name, institution type and status.

Procedure

1. Open **Departments** from the Setup Flow menu.
2. Click **Add Department**. A form opens on top of the page.
3. Enter the **Department Code** and **Department Name**, and choose the **Institution Type**.
4. Click **Create**. A confirmation message appears and the department is added to the list.
5. To rename a department later, click **Edit**, change the name and save.
6. To stop using a department without losing its history, click **Deactivate** and confirm. Click **Activate** to bring it back.

Fields and options

Field	What to enter or choose
Department Code	A short, unique code, for example CS or BUS. It appears in lists and reports and cannot be reused within the same campus.
Department Name	The full name, for example Computer Science.
Institution Type	University, College or School. It decides how levels and results work for everything in the department and cannot be changed later.

© 2026 Tabsan Nexora. All rights reserved.

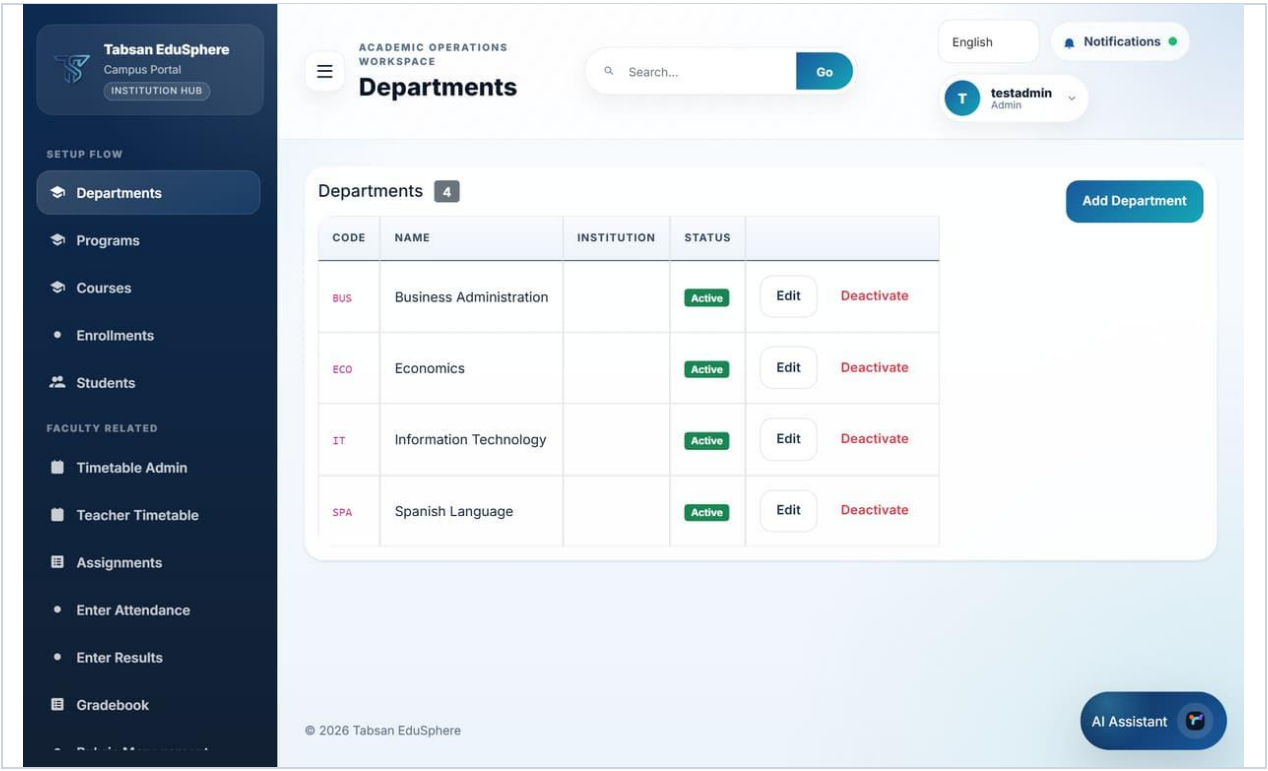

Figure 5.1 *Departments list*

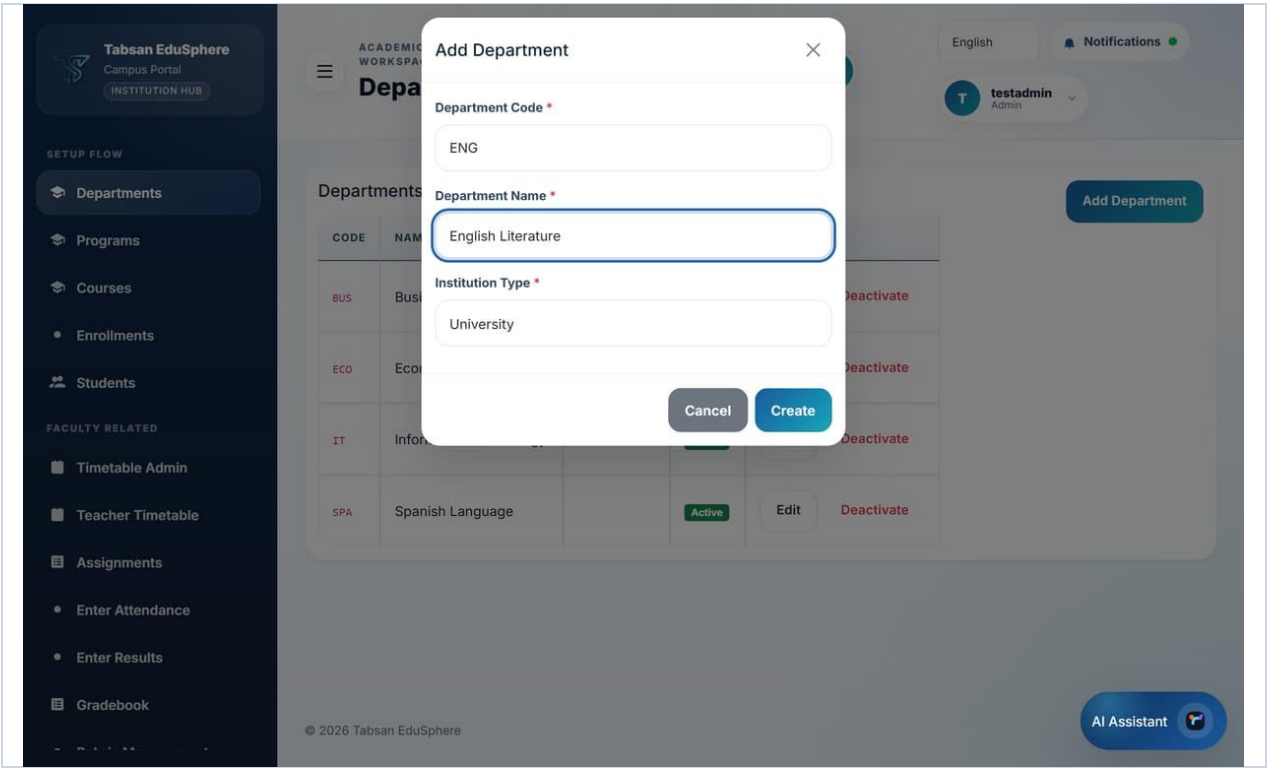

Figure 5.2 *Add Department form completed*

What happens next

The new department is immediately available in the Department filters across the portal. If you are an Admin, it is assigned to you automatically so you can manage it straight away.

© 2026 Tabsan Nexora. All rights reserved.

> **NOTE** SuperAdmin also sees tenant and campus filters and the Admin Department Assignments panel, which controls which Admin users manage each department.

5.2 Programs

Available to: SuperAdmin, Admin, Faculty (view)

A program is a degree or course of study offered by a department, for example Bachelor of Science in Computer Science. Students are admitted to a program, and the program decides how many levels (semesters or classes) they study.

Before you start

- The department the program belongs to must already exist.

Procedure

1. Open **Programs**.
2. In **Create Program**, enter the **Code** and **Name**, choose the **Department**, and set **Total Levels**.
3. Click **Create**. The program appears in the Program List.
4. Use **Filter by Department** to narrow the list. Use **Rename** to correct a name and **Deactivate** to retire a program.

Fields and options

Field	What to enter or choose
Code	A short code, for example BSCS.
Name	The full program name as it should appear on certificates and transcripts.
Department	The department that runs the program.
Total Levels	The number of semesters (University) or classes (School and College). Students graduate after completing the last level.

© 2026 Tabsan Nexora. All rights reserved.

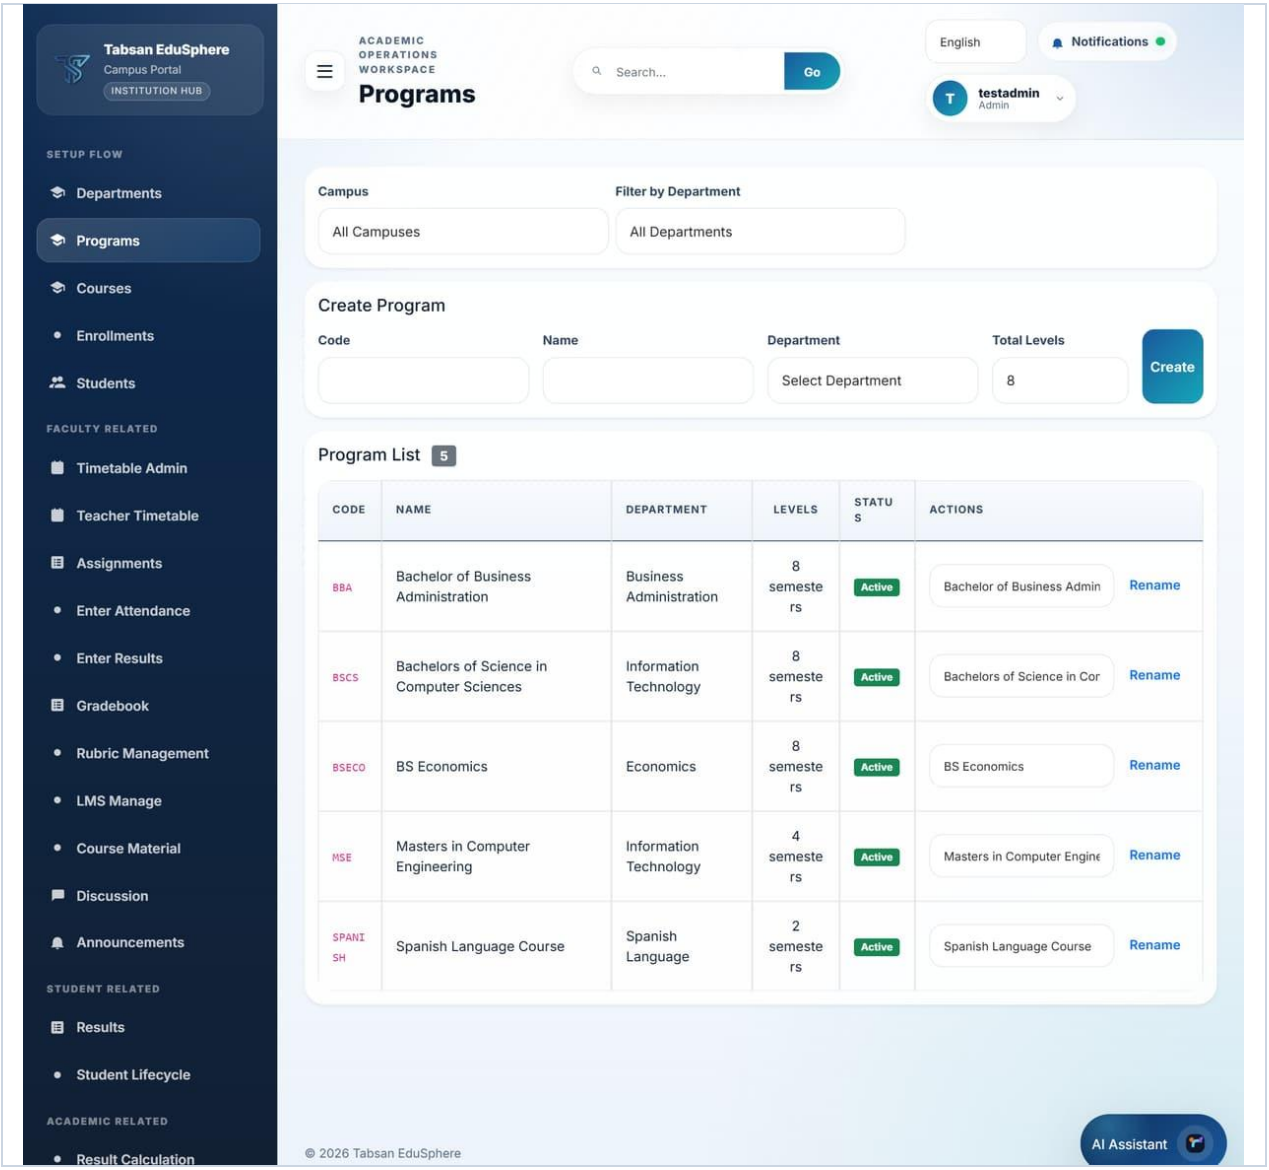

Figure 5.3 *Programs page*

Good to know

- A University program usually needs a degree rule before students can be audited for graduation (see Degree Rules).

5.3 Courses and offerings

Available to: SuperAdmin, Admin, Faculty (view)

A course is a subject, such as CS101 Introduction to Programming, with its credit hours and grading type. An offering is that course being taught in a particular semester or class, usually by one teacher. Students enrol in offerings, attendance is taken per offering, and marks are entered per offering.

The page has two parts: the course catalogue on the left and the active offerings on the right.

Before you start

- The department exists, and for offerings the teacher has a Faculty account.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Open **Courses**, choose the **Department** in the scope filter and click **Apply Scope**.
2. To add a course, click **Add Course**, complete the form and save.
3. To teach a course this term, create an offering: choose the **Course**, optionally the **Faculty** member and the **Max Enrollment**, and save.
4. When teaching finishes, switch the offering **Off** so it no longer accepts enrolments.

Fields and options

Field	What to enter or choose
Course Code / Course Title	The subject code and full title, for example CS101 / Introduction to Programming.
Credit Hours	The credit value used for GPA and degree audits.
Grading Type	How the course is graded (for example by marks and grades).
This course is semester-based	Tick for normal semester courses. Untick for courses that run over several semesters, then set the Number of Semesters or a Duration.
Faculty (offering)	The teacher responsible for the offering. They will see it in their classes. Optional; it can be added later.
Max Enrollment (offering)	The largest number of students who can enrol. Further students are placed on a waiting list.

© 2026 Tabsan Nexora. All rights reserved.

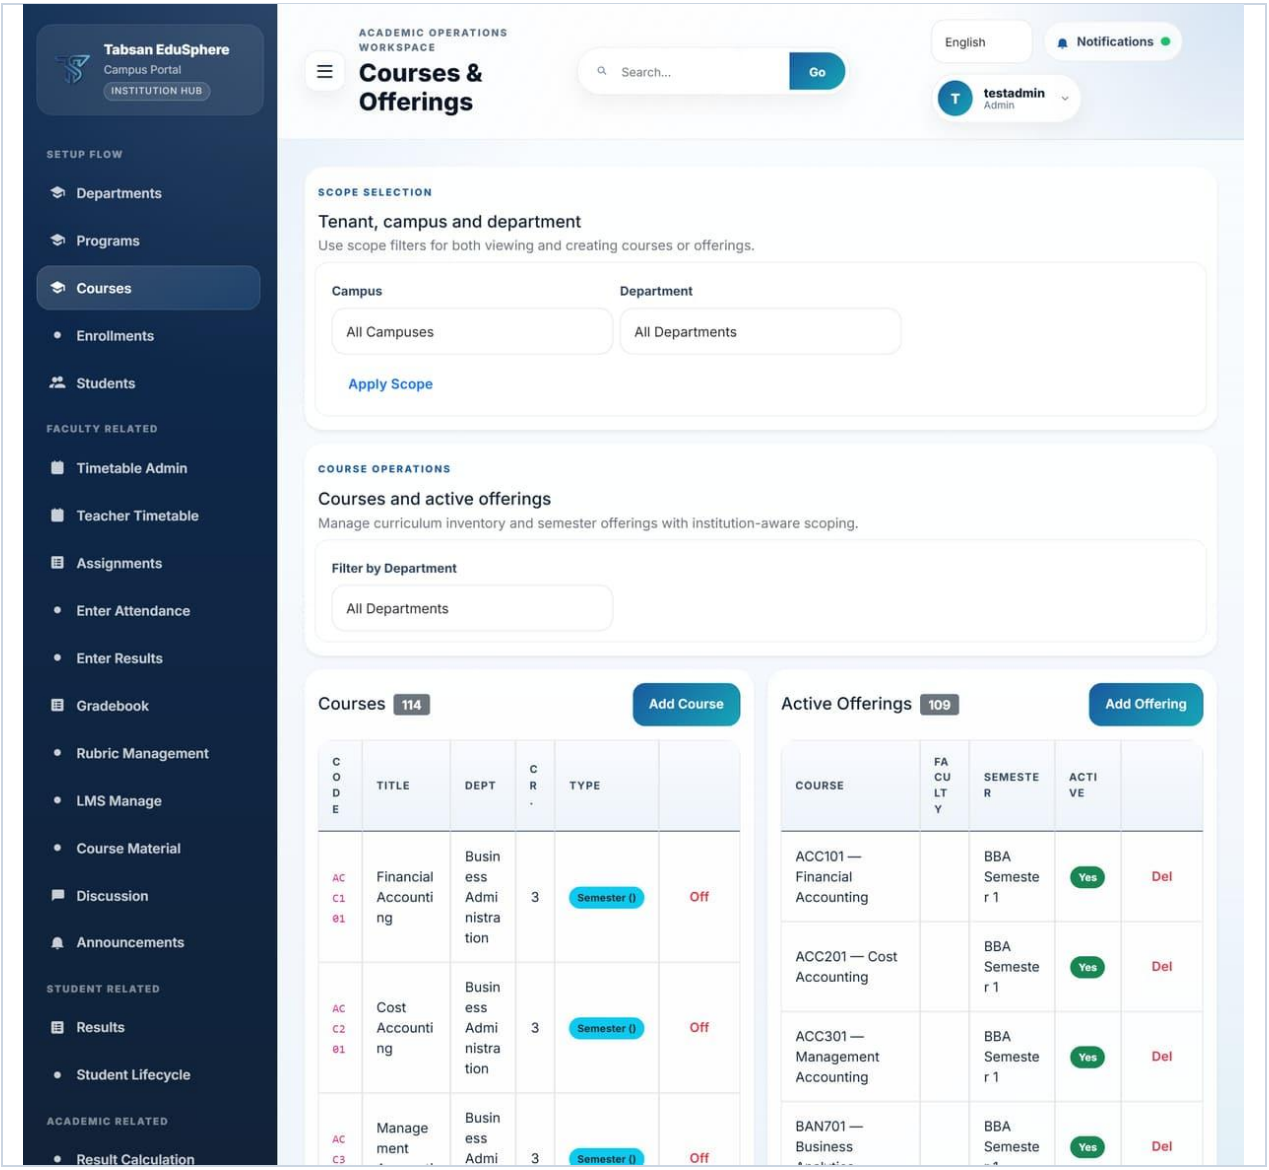

Figure 5.4 *Courses and active offerings*

Good to know

- Mark a course as core or elective where the option is shown; degree audits count core and elective credits separately.

5.4 Enrollments

Available to: SuperAdmin, Admin, Faculty (own courses)

Enrollments connect students to the course offerings they are taking. A student must be enrolled in an offering to appear in its attendance sheet, mark sheet and gradebook.

Staff enroll students in bulk: choose a department and a class or semester, tick the courses, tick the students, and enroll them all with one click. Each student is shown with their roll number and name, so you always know who you are selecting. Admins can manage every course in their departments; teachers can manage the courses they teach.

© 2026 Tabsan Nexora. All rights reserved.

Before you start

- The course offerings exist for the class or semester (see Courses) and are open for enrollment.
- The students have student profiles (created in User Import) in the department.

Procedure

1. Open **Enrollments**. SuperAdmin users can first choose an **Institute**.
2. Choose the **Department** and then the **Class** (School and College) or **Semester** (University). The list shows how many courses each class or semester has.
3. Under **1. Courses**, tick the courses to enroll the students in. All open courses are ticked to start with. Each row shows the teacher, the seats used (for example 20 / 40), any waitlist, and whether the course is Open, Closed or Full.
4. Under **2. Students**, the students of that department who are currently in that class or semester are listed with their **Roll No.**, **Name**, **Program** and level. Use **Search** (roll number or name) and **Program** to narrow the list, or **Show all department students** to include other levels. Students already in every ticked course are hidden.
5. Tick the students, or click **Select all shown**. The bar at the bottom counts your selection, for example "5 students × 4 courses selected".
6. Click **Enroll N students in M courses**. A summary shows how many were enrolled, waitlisted, already enrolled or not enrolled, with the reason for each student who could not be enrolled.
7. To see who is in a course, click **Roster** next to it. Tick students and click **Drop selected** to remove them, or **Download CSV** to save the list.

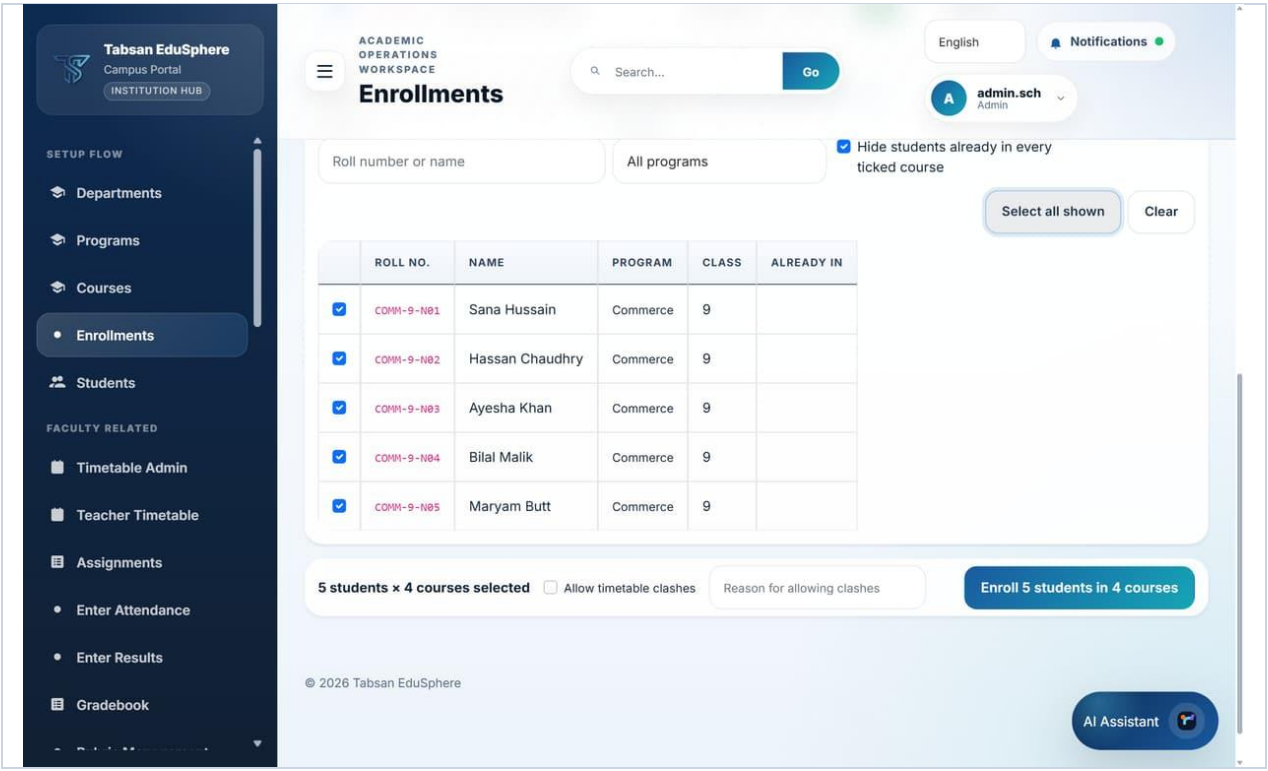

Figure 5.5 *Students of Commerce, Class 9 selected for enrollment in 4 courses*

© 2026 Tabsan Nexora. All rights reserved.

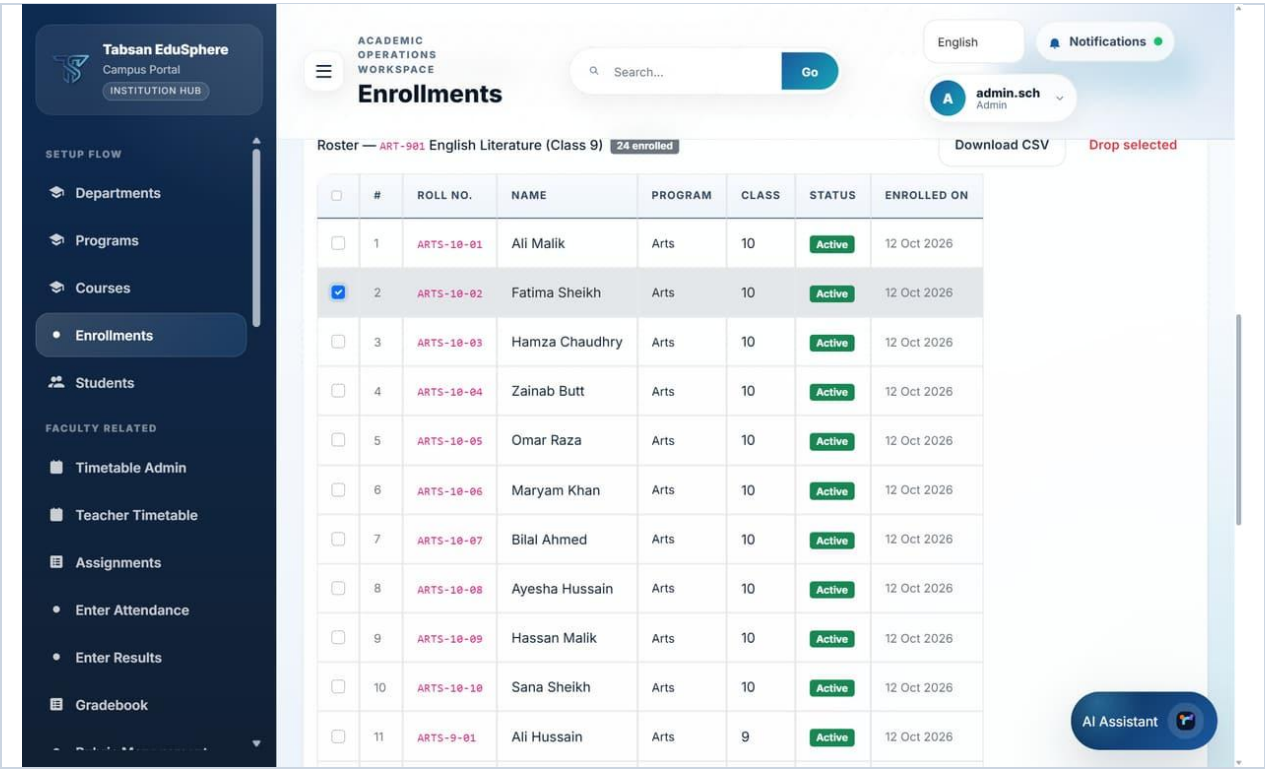

Figure 5.6 *Course roster with roll numbers, names and Drop selected*

What happens next

Enrolled students immediately appear in the course's attendance sheet, mark sheet and gradebook, and in their own My Enrolled Courses list. When a course is full, extra students are placed on its waitlist and move in automatically when a seat frees up.

Why a student may not be enrolled

Reason shown	What to do
Unmet prerequisites	The student has not passed the course listed in brackets. Enroll them in that course first (see Prerequisites).
Timetable clash detected	The course meets at the same time as another of the student's courses. Admins can tick **Allow timetable clashes** and give a reason.
Enrollment is closed for this offering	The course is closed. Admins can click **Open** next to it.
Semester is closed	The class or semester has been closed and cannot take new students.
Student belongs to a different institute	School, College and University students can only join their own institute's courses.
Already enrolled in this offering	Nothing to do: the student is already in the course.

Enrollment statuses

Status	Meaning
Active	The student is taking the offering.
Waitlisted	The offering was full; the student moves in automatically when a place becomes free.

© 2026 Tabsan Nexora. All rights reserved.

Status	Meaning
Dropped	The student left the offering. History is kept.
Cancelled	The enrollment (or waitlist place) was cancelled by the institution.

Good to know

- Admins can stop all enrollment changes for a campus with **Deactivate Enrollment**, and turn it back on the same way.
- Students can also enroll themselves in open courses from their own Enrollments page.

> **NOTE** Courses with prerequisites can only be enrolled in once the student has passed the prerequisite course (see Prerequisites).

5.5 Students

Available to: SuperAdmin, Admin, Faculty

The Students page is a searchable directory of student profiles. Each row shows the registration number, full name, department, program, current level and status.

Faculty see the students of the departments they teach; Admins see the students of their assigned departments.

Procedure

1. Open **Students**.
2. Choose a **Department** to filter the list.
3. Scan or search the list. The number beside Student List shows how many students match.

© 2026 Tabsan Nexora. All rights reserved.

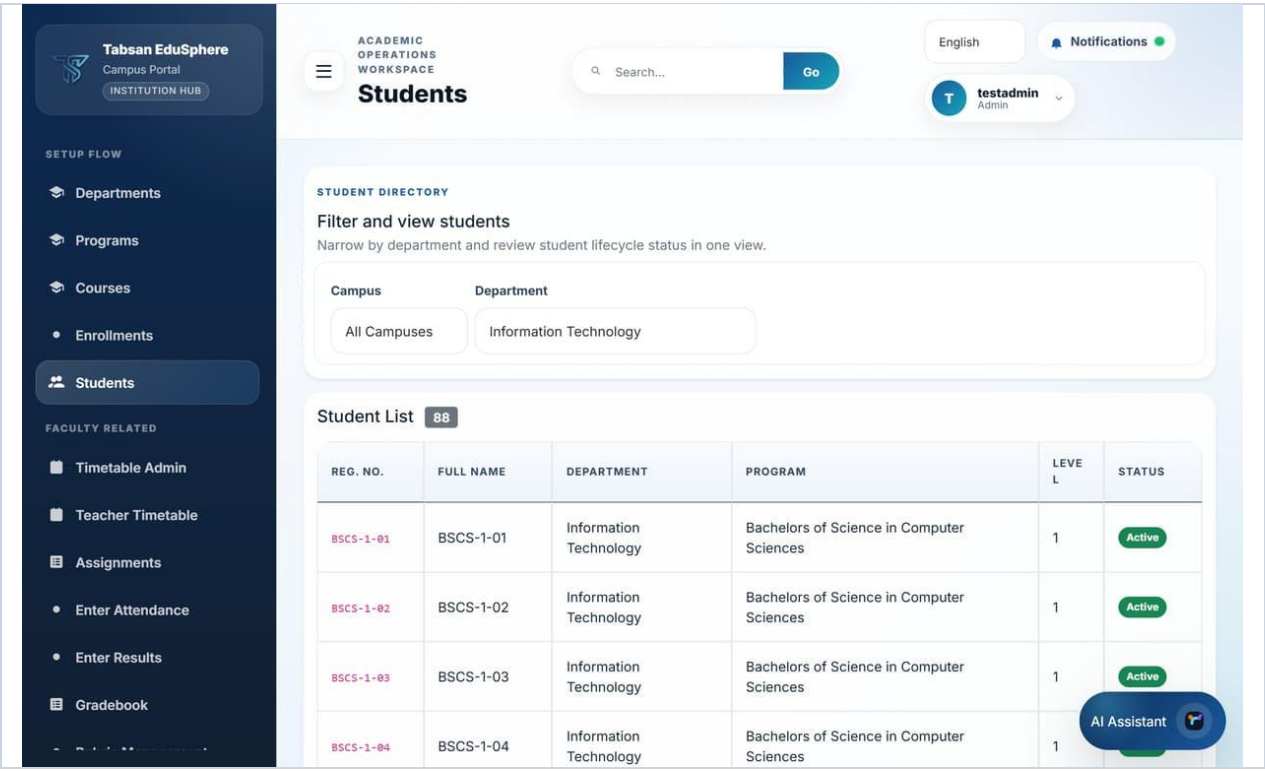

Figure 5.7 *Student list filtered by department*

Student statuses

Status	Meaning
Active	Currently studying.
Inactive	Studies paused or the account was deactivated.
Graduated	Completed the program. Graduated students keep read access to their records.

> **TIP** New students are added through User Import (single user or CSV). Promotion between semesters is handled in Student Lifecycle.

© 2026 Tabsan Nexora. All rights reserved.

6 Timetables and Facilities

Timetables tell teachers and students when and where each class happens. Buildings and rooms are set up first so they can be chosen when timetable entries are added.

6.1 Buildings and rooms

Available to: SuperAdmin, Admin

Buildings and rooms describe where classes take place. They are used when adding timetable entries, so rooms show correctly on teacher and student timetables.

Procedure

1. Open **Buildings**. Under **Add Building**, enter the **Name** and **Code** and click **Create**.
2. To rename a building or switch it off, click its name in the list; an edit panel opens with **Save** and **Deactivate**.
3. Open **Rooms** (or click **Rooms** next to a building). Choose the building, enter the **Room Number** and optional **Capacity**, and click **Create**.

Fields and options

Field	What to enter or choose
Building Name / Code	For example Faculty Block A / FBA. The code is shown on timetables, so keep it short.
Room Number	The room label, for example 101 or Lab 2.
Capacity	Optional. The number of seats, useful when planning large classes.

© 2026 Tabsan Nexora. All rights reserved.

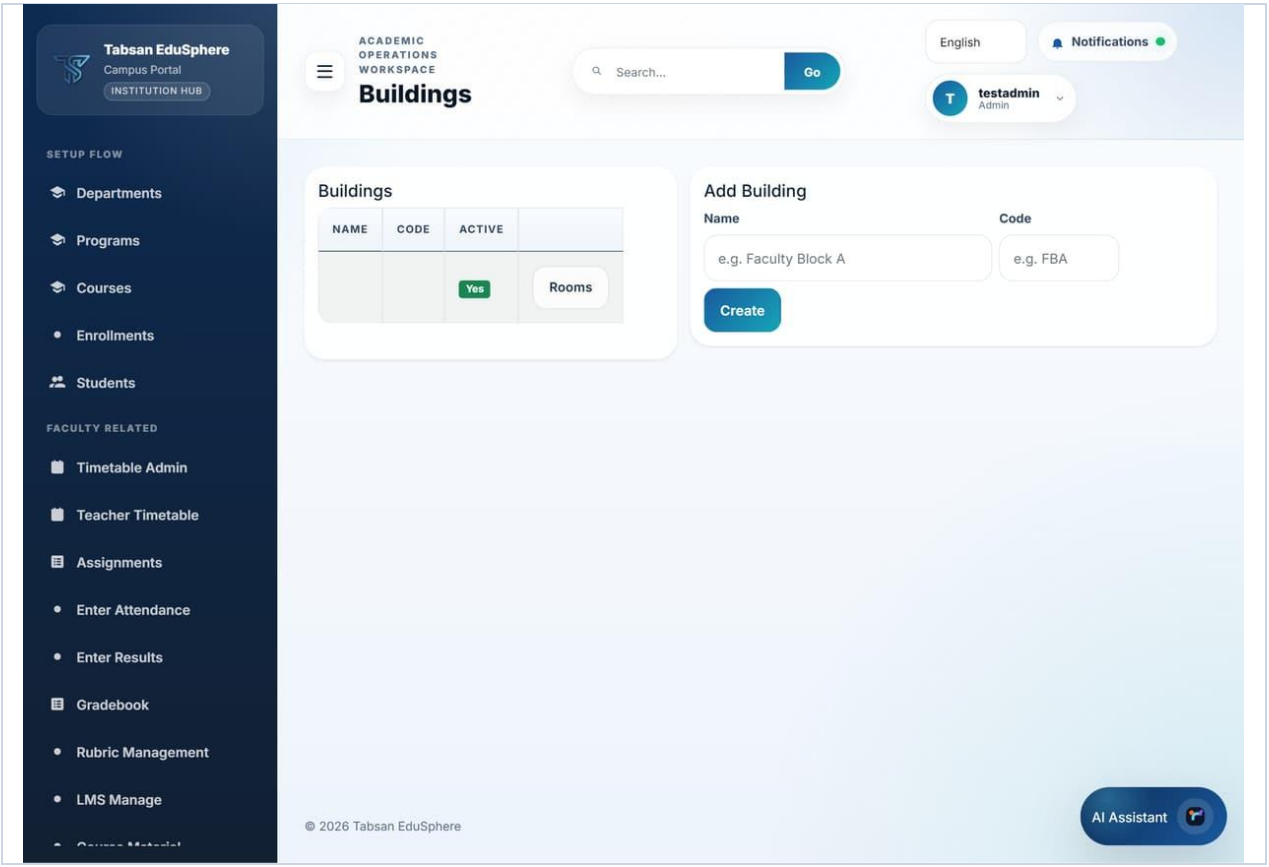

Figure 6.1 *Buildings*

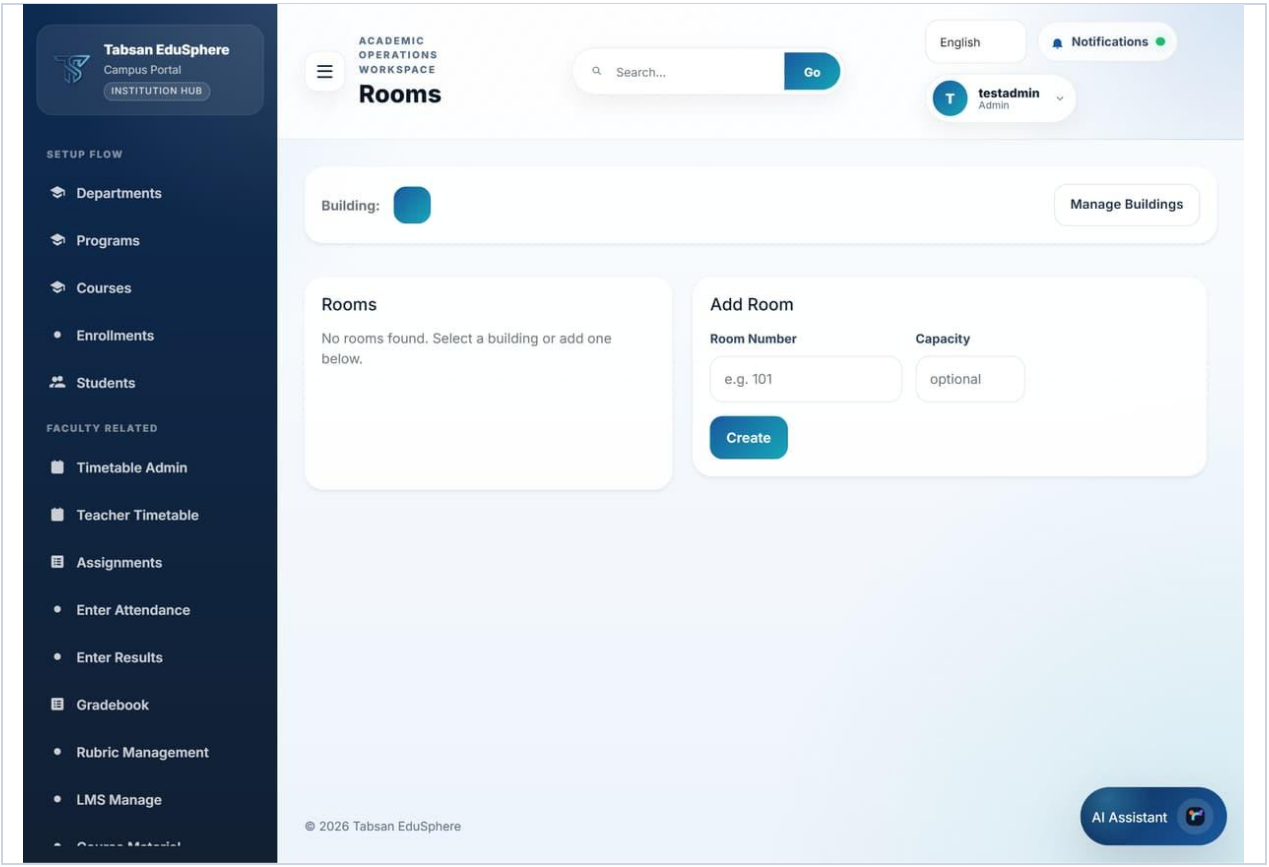

Figure 6.2 *Rooms*

© 2026 Tabsan Nexora. All rights reserved.

6.2 Timetable Admin

Available to: SuperAdmin, Admin

Timetable Admin builds the weekly class timetable for each program level, for example "7th Semester of BBA". A timetable has an effective date and a list of entries; each entry is one class on one day.

Before you start

- The program, its courses, the teachers and the rooms already exist.

Procedure

1. Open **Timetable Admin** and set the **Scope Selection** (campus and department), then click **Apply Scope**.
2. Under **Create Timetable**, choose the **Degree Program**, **Semester** and **Semester Number**, set the **Effective Date**, and click **Create Timetable**.
3. Select the new timetable in **Available Timetables**.
4. Under **Add Entry**, choose the **Day**, **Start** and **End** time, **Subject**, **Teacher**, **Building** and **Room**, then click **Add Entry**.
5. Repeat for every class in the week. The entries appear in a table ordered by day and time.
6. Publish the timetable so that students can see it in Student Timetable.

Fields and options

Field	What to enter or choose
Effective Date	The date from which the timetable applies. Create a new timetable when the schedule changes, rather than editing an old one, to keep history.
Subject (Fallback) / Room (Fallback)	Free-text alternatives for a subject or room that is not in the lists, for example "Sports Ground".

© 2026 Tabsan Nexora. All rights reserved.

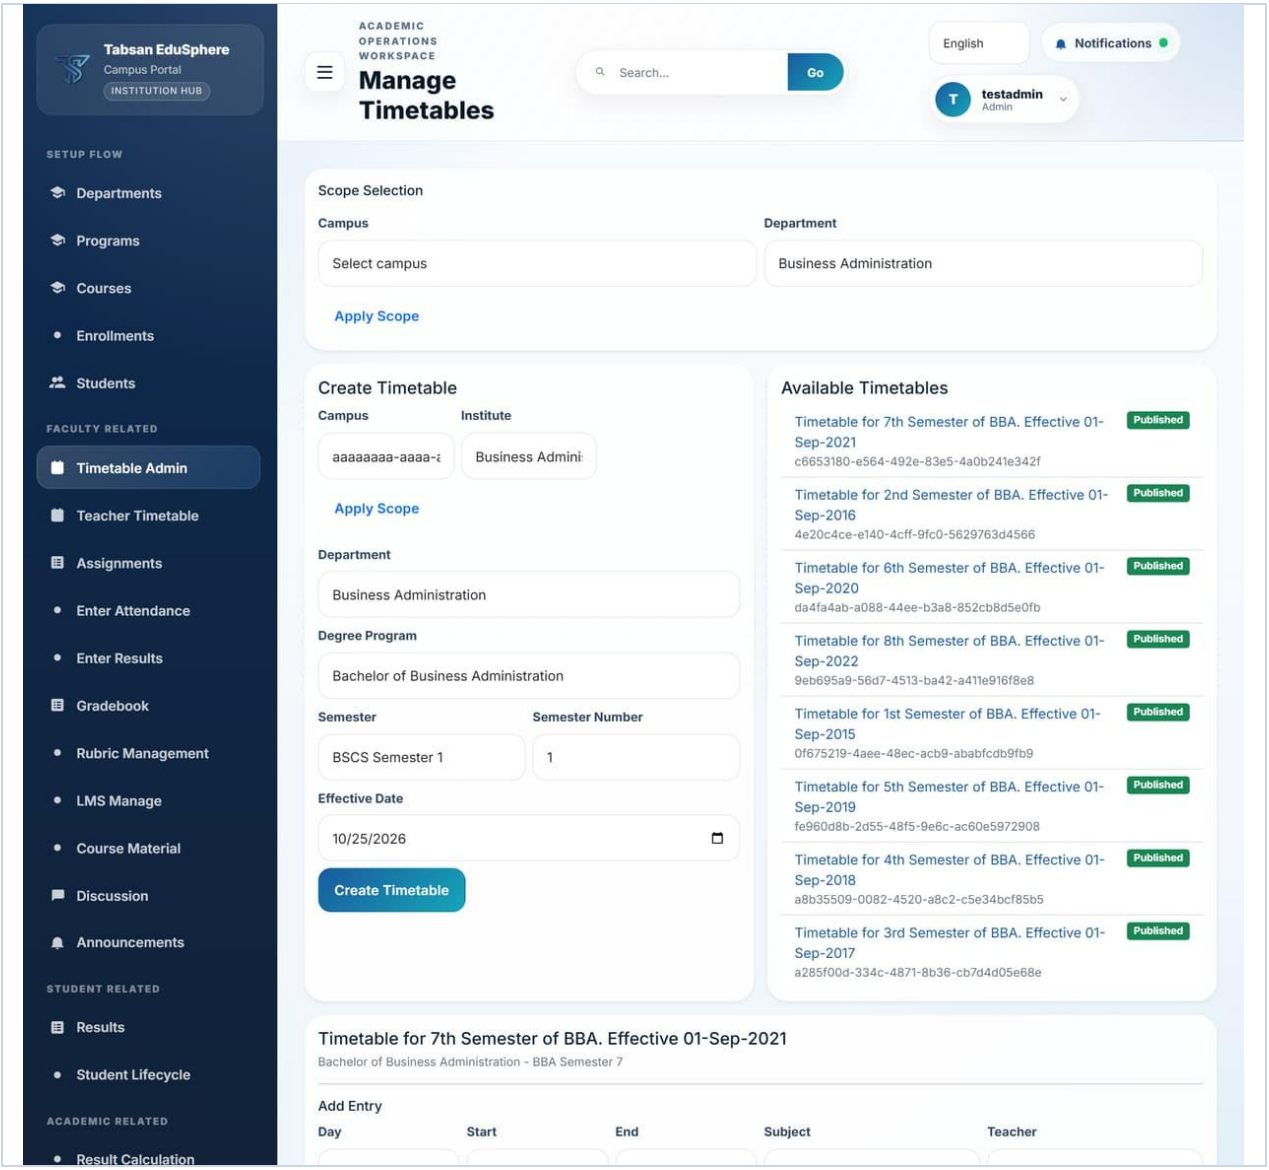

Figure 6.3 *Timetable Admin*

> **NOTE** SuperAdmin must select both a tenant and a campus before creating or editing entries.

6.3 Teacher Timetable

Available to: SuperAdmin, Admin, Faculty

Teacher Timetable shows every class assigned to one teacher across all published timetables, so a teacher can see their whole week in one place.

Faculty see their own timetable straight away. Admins choose a **Faculty** member and click **Apply**. Tick **Show deactivated** to include timetables that are no longer in use.

© 2026 Tabsan Nexora. All rights reserved.

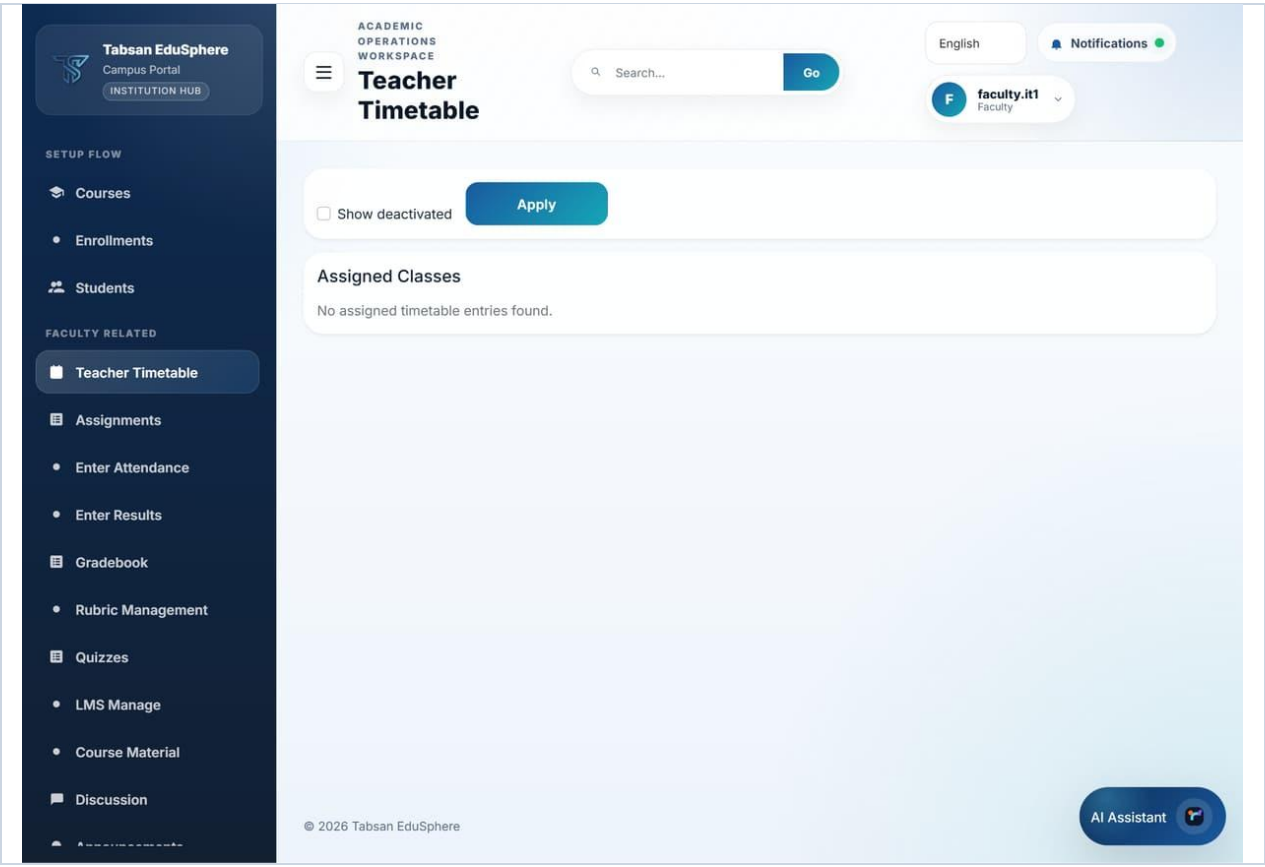

Figure 6.4 *Teacher Timetable (Faculty view)*

6.4 Student Timetable

Available to: Student

Students see the published timetables for their own department. Choose a **Timetable** and, if you only want one day, a **Day Filter**, then click **Apply**. Each row shows the day, time, subject, teacher, building and room.

© 2026 Tabsan Nexora. All rights reserved.

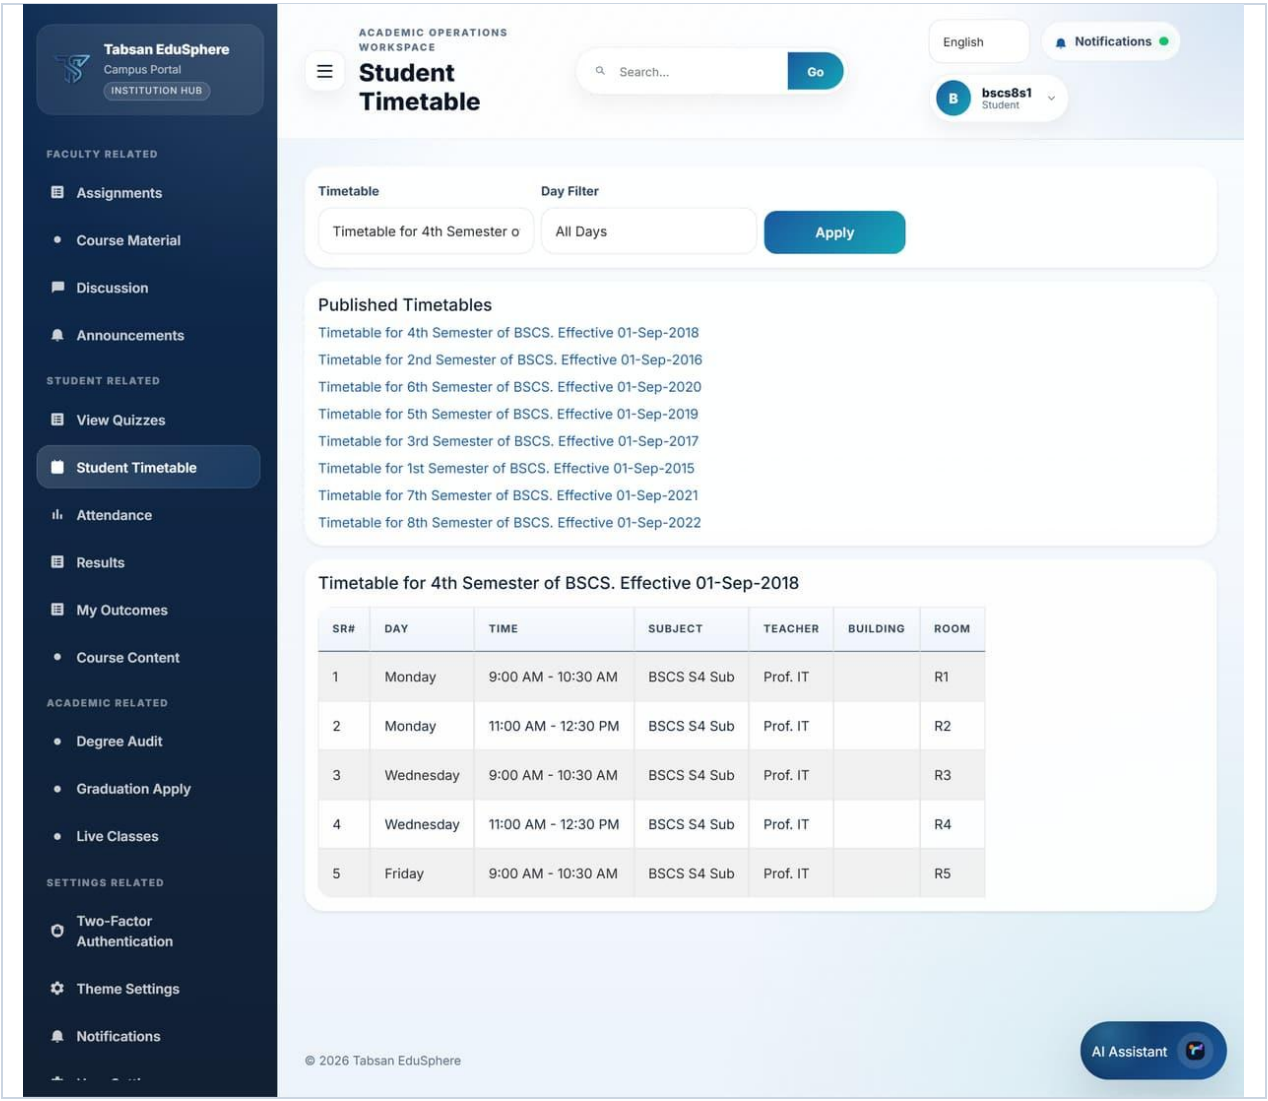

Figure 6.5 *Student Timetable*

Good to know

- If no timetable appears, it may not be published yet. Check with your department office.

© 2026 Tabsan Nexora. All rights reserved.

7 Teaching and Learning

This chapter covers the pages teachers use every week and what students see on the other side: assignments, attendance, marks, online course content (modules, live classes, external tools and SCORM packages), discussions and announcements. Quizzes and the detailed marking of assignments are in Chapter 8, and learning outcomes in Chapter 9.

7.1 Assignments

Available to: SuperAdmin, Admin, Faculty, Student

Assignments are pieces of coursework set for an offering. Teachers create and publish them, students hand in text and/or files before the due date, and teachers mark each submission in the grading workspace with marks, a rubric, annotations and comments.

Procedure

1. Open **Assignments** and choose the department and offering.
2. Faculty: create an assignment with a **Title**, **Description**, **Due Date** and **Max Marks**, then publish it so students can see it.
3. Faculty: click **Options** next to the assignment to set when work can be handed in, give individual students their own dates, make it group work, add peer review or switch on similarity checking (Chapter 8).
4. Students: open the assignment, type your answer and/or attach files, and hand in before the due date. If your teacher allows more than one attempt, each new hand-in is kept as a separate attempt.
5. Faculty: click **Grade** to open the grading workspace and mark each submission (Chapter 8).
6. Tick **Show inactive assignments** to see assignments that have been retired.

Fields and options

Field	What to enter or choose
Title / Description	What the students must do. Include any length, format or referencing requirements in the description.
Due Date	The deadline shown to students. Students given their own dates see those instead.
Max Marks	The highest mark available; used to calculate percentages and grades.
Submission settings	Under **Grade** > **Settings**: attempts allowed (0 = unlimited), accepted file types, maximum file size, when students see grades (as soon as they are saved, or only when you post them), anonymous grading and moderated grading.

© 2026 Tabsan Nexora. All rights reserved.

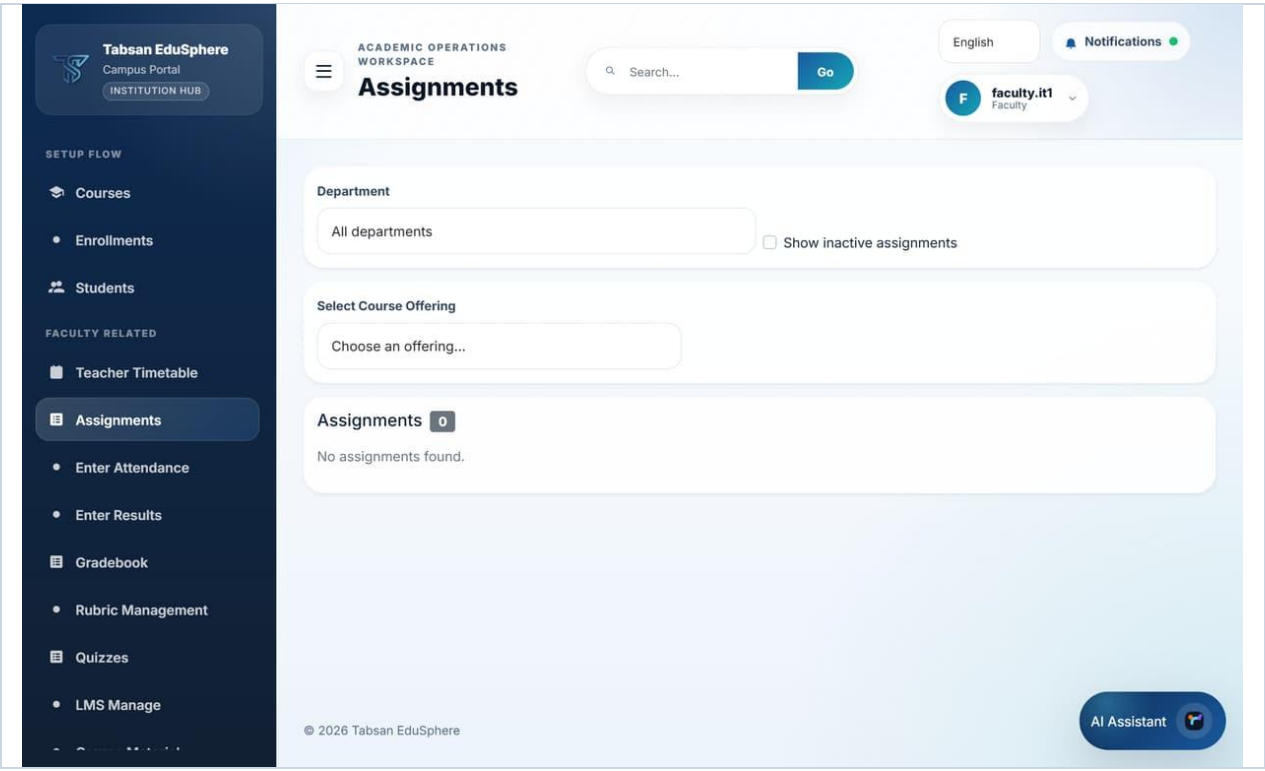

Figure 7.1 *Assignments (Faculty)*

© 2026 Tabsan Nexora. All rights reserved.

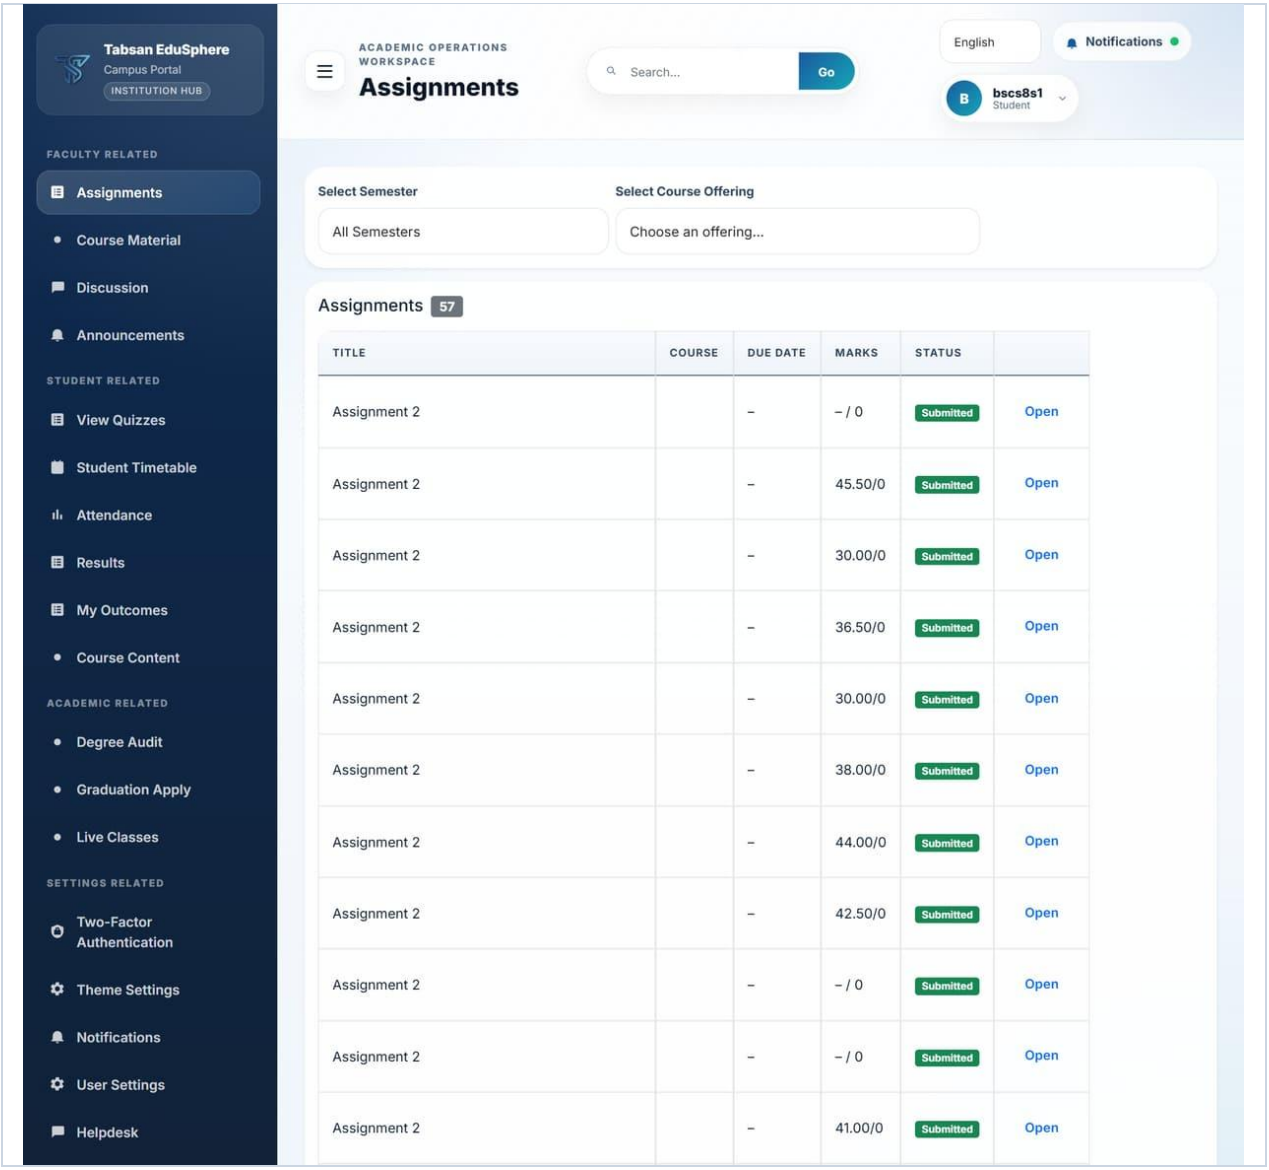

Figure 7.2 *Assignments (Student view)*

Submission statuses

Status	Meaning
Submitted	The student has handed in work; waiting for grading.
Graded	Marks and feedback are available to the student.
Rejected	The teacher returned the submission; the student should follow the feedback.

7.2 Entering attendance

Available to: SuperAdmin, Admin, Faculty

Attendance is recorded for each offering and each class date. Teachers usually record it at the end of every class. The page also shows a running summary for the offering.

Before you start

- Students must be enrolled in the offering to appear in the attendance table.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Open **Enter Attendance**.
2. Choose the **Department**.
3. Choose the **Course** (program).
4. Choose the offering in **Select Course Offering**. The Attendance Summary and the Attendance Entry Table load.
5. In the entry table, tick **Present** for each student who attended (untick for absent) and click **Save Attendance**.
6. To load a whole class at once, click **Get Template**, fill in the CSV in a spreadsheet, and use **Import Attendance**. Tick **Strict mode** to reject the whole file if any row is invalid.

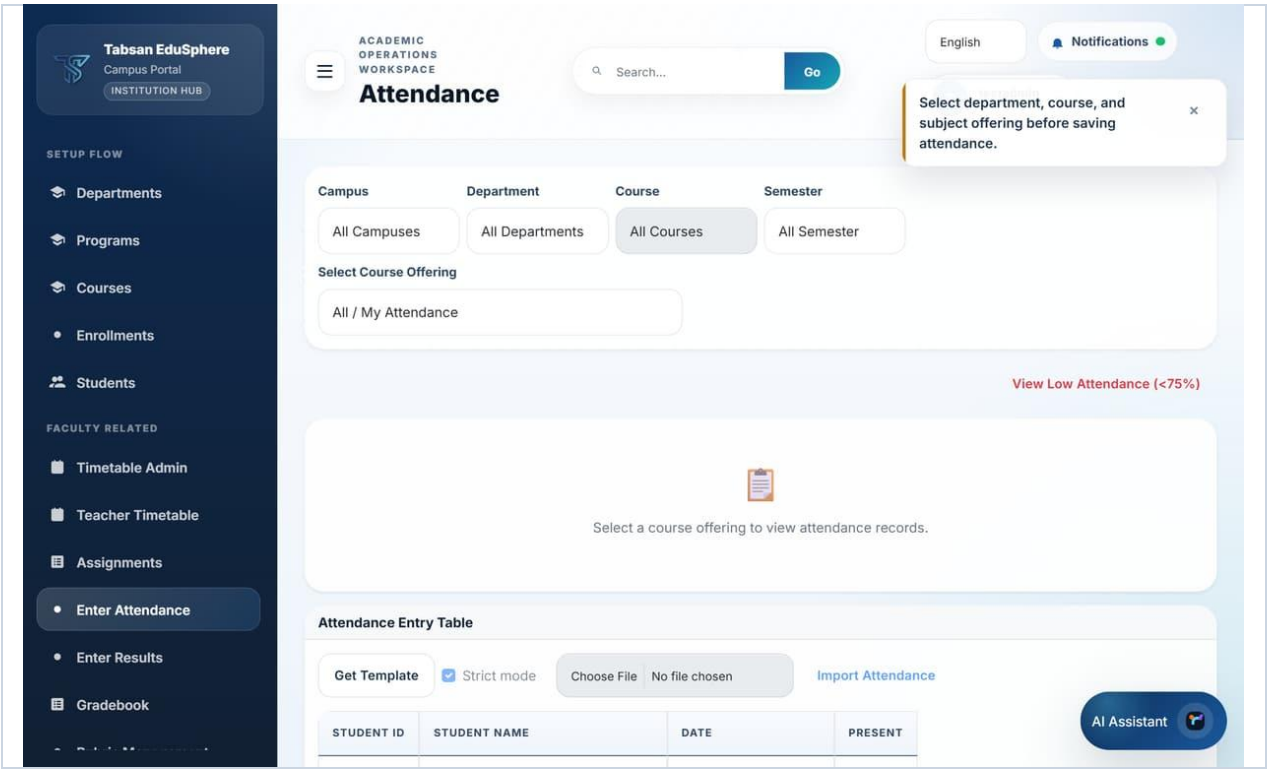

Figure 7.3 *Enter Attendance – scope filters*

© 2026 Tabsan Nexora. All rights reserved.

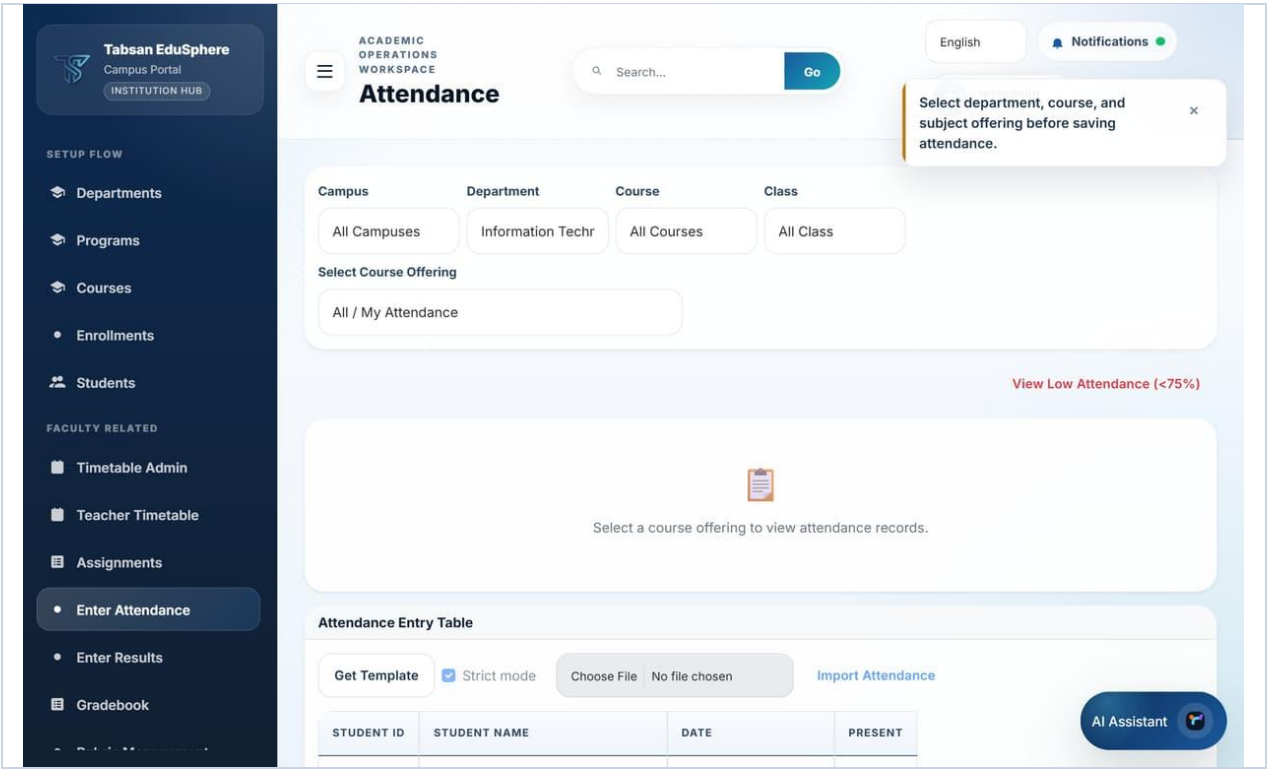

Figure 7.4 *Step 1: department selected*

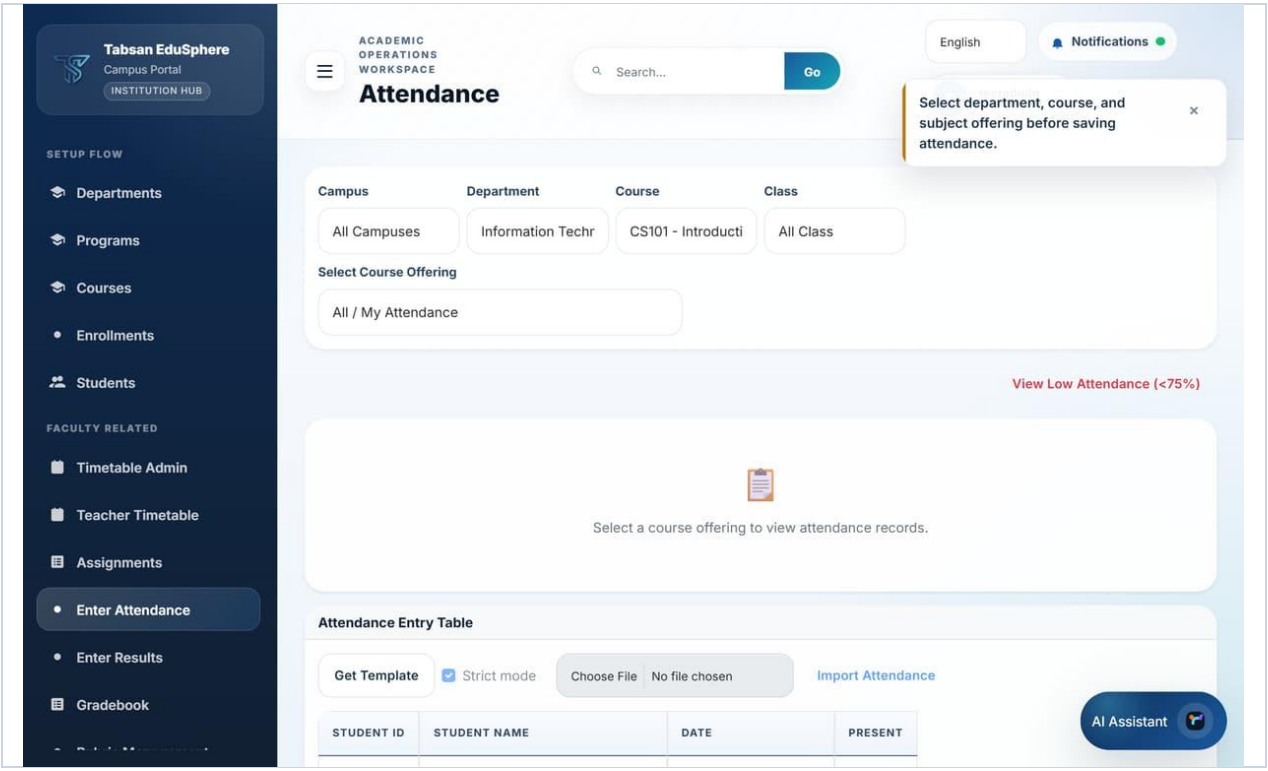

Figure 7.5 *Step 2: course selected*

© 2026 Tabsan Nexora. All rights reserved.

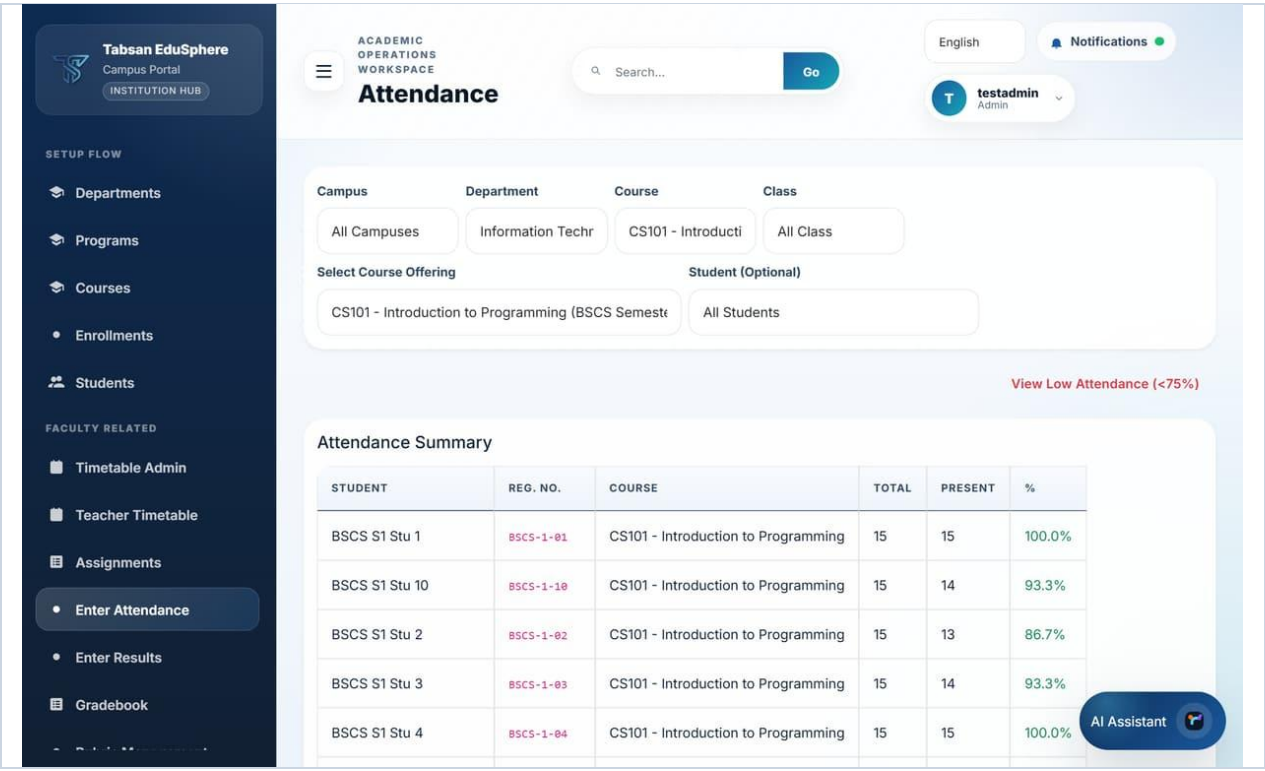

Figure 7.6 *Step 3: offering selected – attendance summary per student*

Attendance statuses

Status	Meaning
Present	Attended the class.
Late	Attended but arrived late. Counts as present in percentages.
Absent	Did not attend.
Excused	Absent with permission.

Good to know

- Click **View Low Attendance (<75%)** to list students below the attendance threshold so you can follow up early.
- Mistakes can be corrected later; corrections are recorded in the audit log.

7.3 Viewing attendance

Available to: Faculty, Student

The Attendance page shows totals and percentages. Students see one row per course with the number of classes held, the number attended and the percentage, coloured green (75% or more), amber (50–75%) or red (below 50%).

A separate **Low Attendance (<75%)** list shows any courses where the student is below the threshold.

© 2026 Tabsan Nexora. All rights reserved.

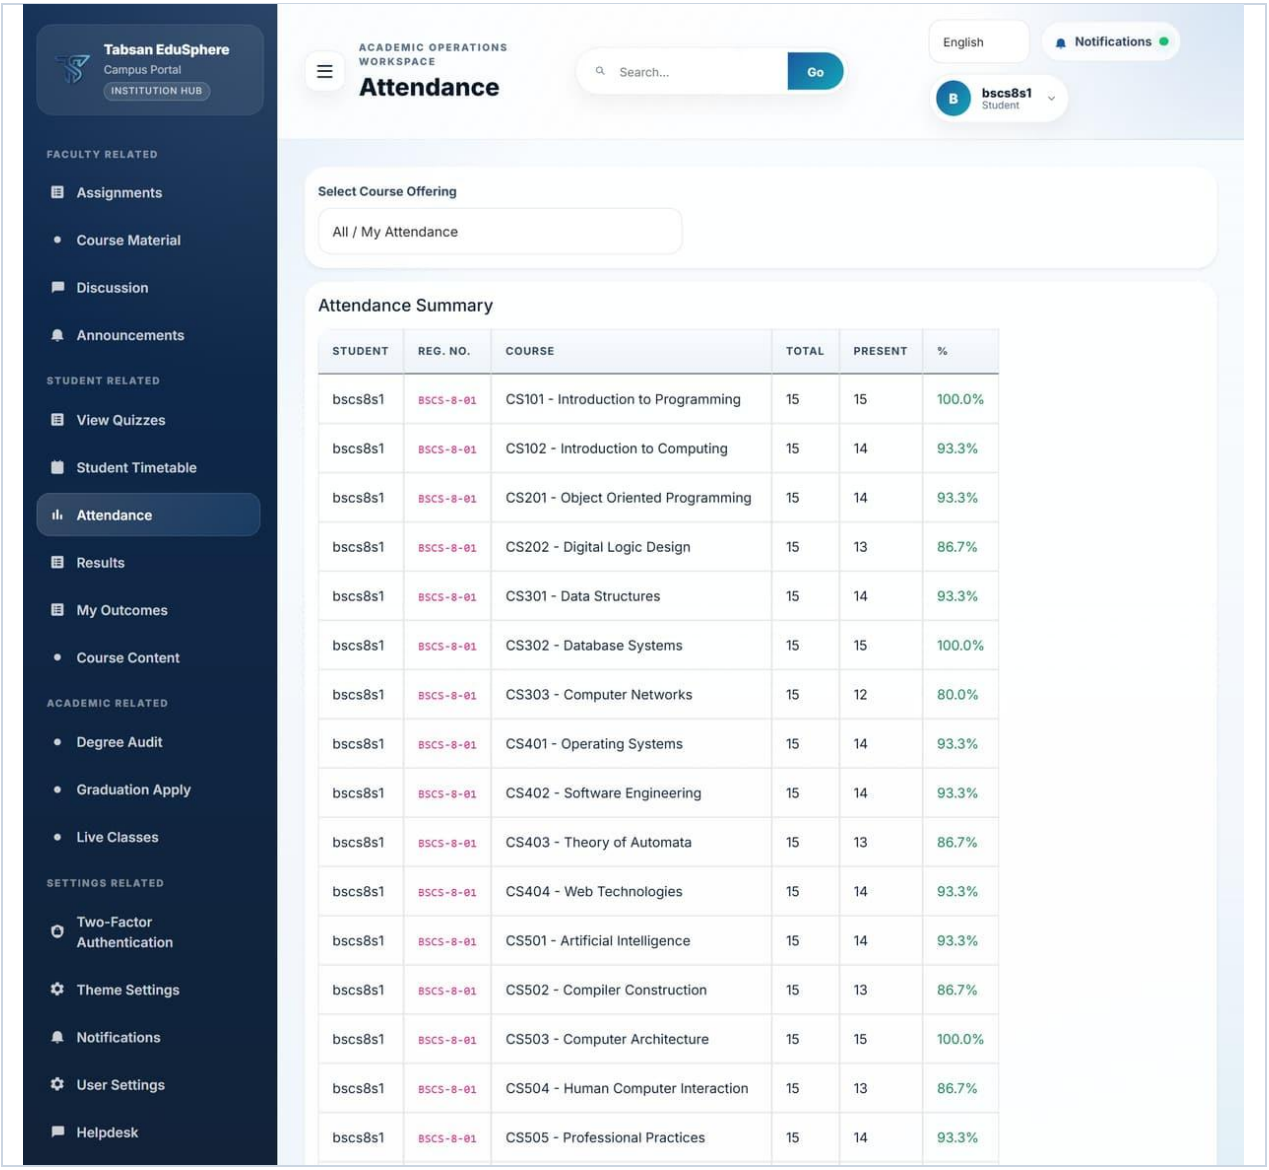

Figure 7.7 *Attendance (Student view)*

> **IMPORTANT** Many institutions require at least 75% attendance to sit final exams. Students should contact their teacher early if their percentage is low.

7.4 Entering results

Available to: SuperAdmin, Admin, Faculty

Marks are entered per subject and exam type, for example the Midterm of CS101. The page requires the department, program, subject and exam type to be chosen first, so that marks are always stored against the right assessment.

Results stay private until they are published. After publishing, students can see them immediately.

Before you start

- Students are enrolled in the offering, and Result Calculation is set up so marks can be turned into grades.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Open **Enter Results** and choose the **Department**.
2. Choose the **Program/Course**.
3. Choose the **Subject**.
4. Choose the **Exam Type** and click **Apply**.
5. Click **+ Enter Result**, choose the **Student**, enter **Marks Obtained** and **Max Marks**, and save. Repeat for each student, or download the CSV with **Get Template**, fill it in and upload it with **Import Results**.
6. Review the Result Entry Grid. When it is correct, click **Publish All** to release the results to students.
7. Use **Export CSV** or **Export PDF** to keep a copy.

Fields and options

Field	What to enter or choose
Exam Type	The assessment: Midterm, Final, Quiz, Assignment, Practical, Theory or Internal.
Marks Obtained / Max Marks	The student's mark and the highest possible mark. The grade is calculated automatically.
strict (import)	When ticked, the whole file is rejected if any row has a problem, so you never get a half-imported mark sheet.

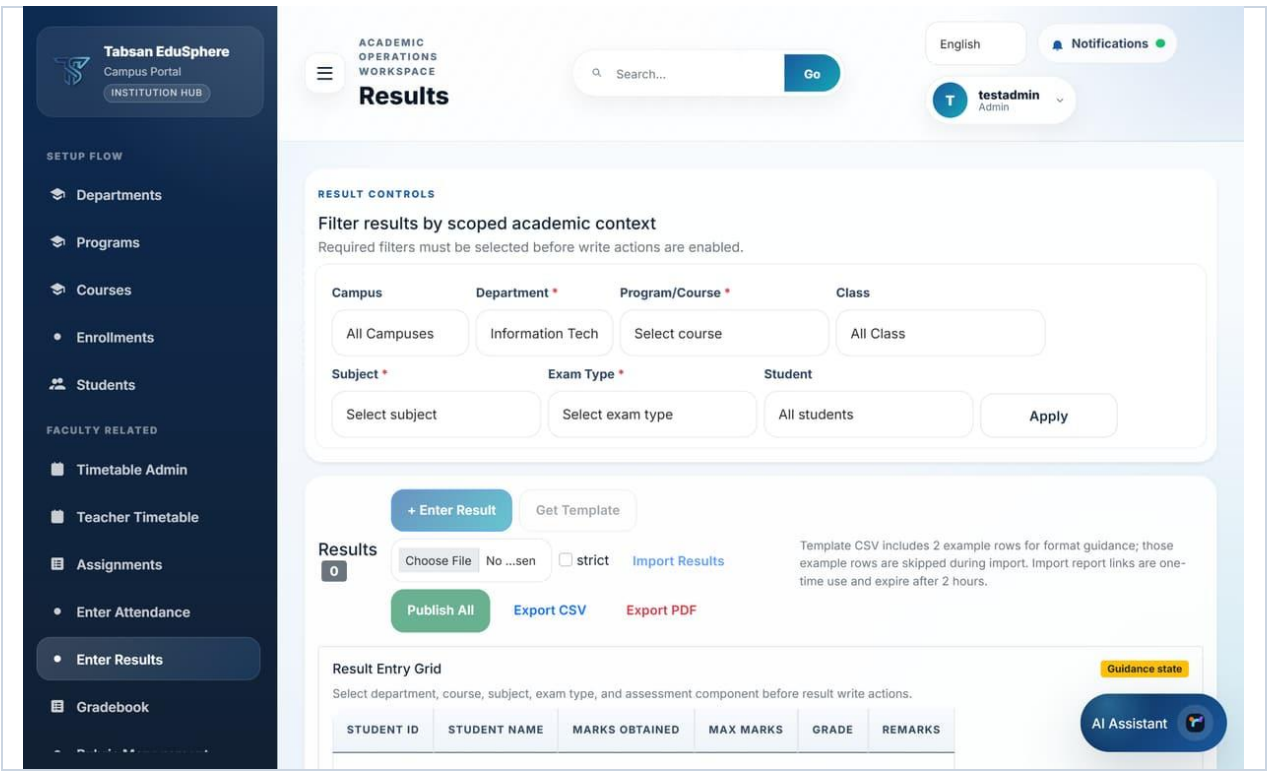

Figure 7.8 *Step 1: department*

© 2026 Tabsan Nexora. All rights reserved.

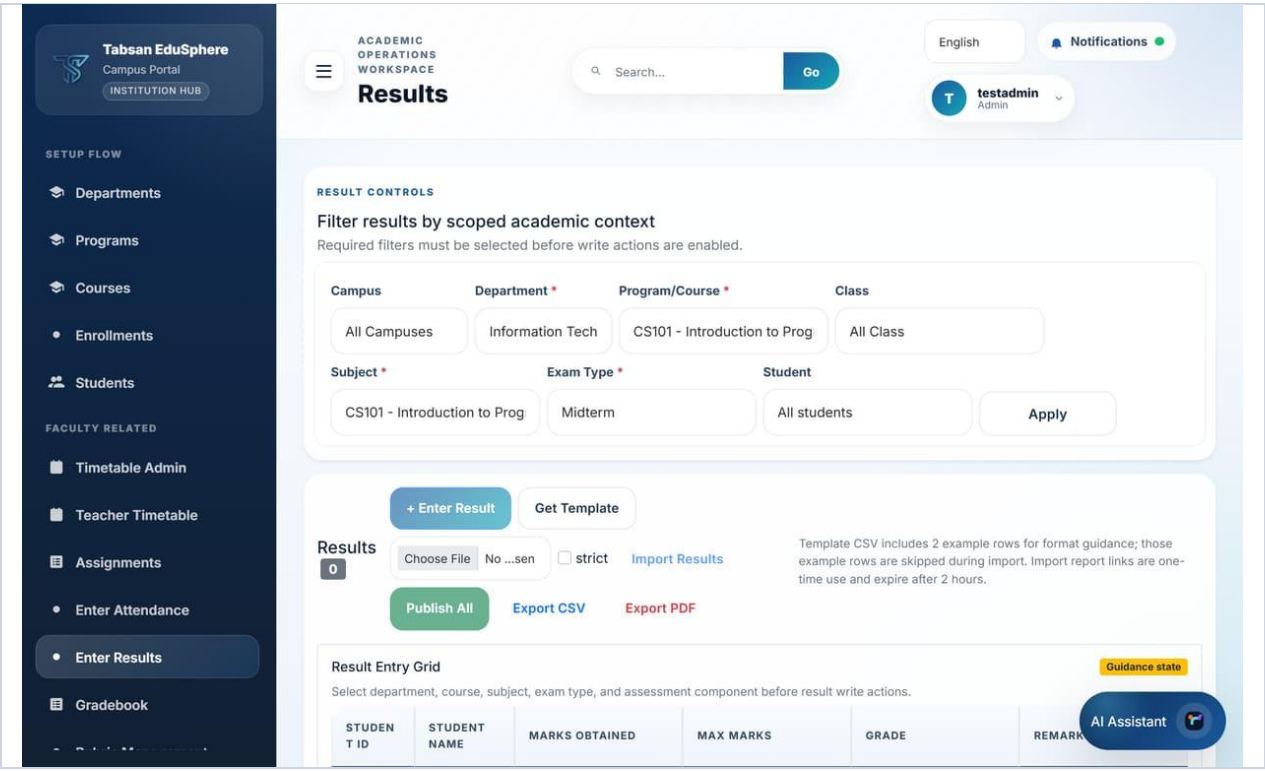

Figure 7.9 *Steps 2–4: program, subject and exam type applied; the Result Entry Grid*

What happens next

Published marks appear on the student's Results page, in the Gradebook and in result reports. The student's semester GPA and CGPA (University) or percentage (School and College) are recalculated.

To change a published mark, a teacher submits a modification request with the proposed marks and a reason; an Admin approves or rejects it. Every change is recorded in the audit log.

> **IMPORTANT** Check marks carefully before clicking Publish All. Students are notified and can see published results straight away.

7.5 Gradebook

Available to: SuperAdmin, Admin, Faculty

The Gradebook shows every student's marks for every assessment of one offering in a single grid, so a teacher can see the whole class at a glance and spot missing marks.

Choose a **Course Offering** to load the grid. You can also upload marks in bulk from a CSV file, review the preview, confirm it, and publish all marks for the offering.

© 2026 Tabsan Nexora. All rights reserved.

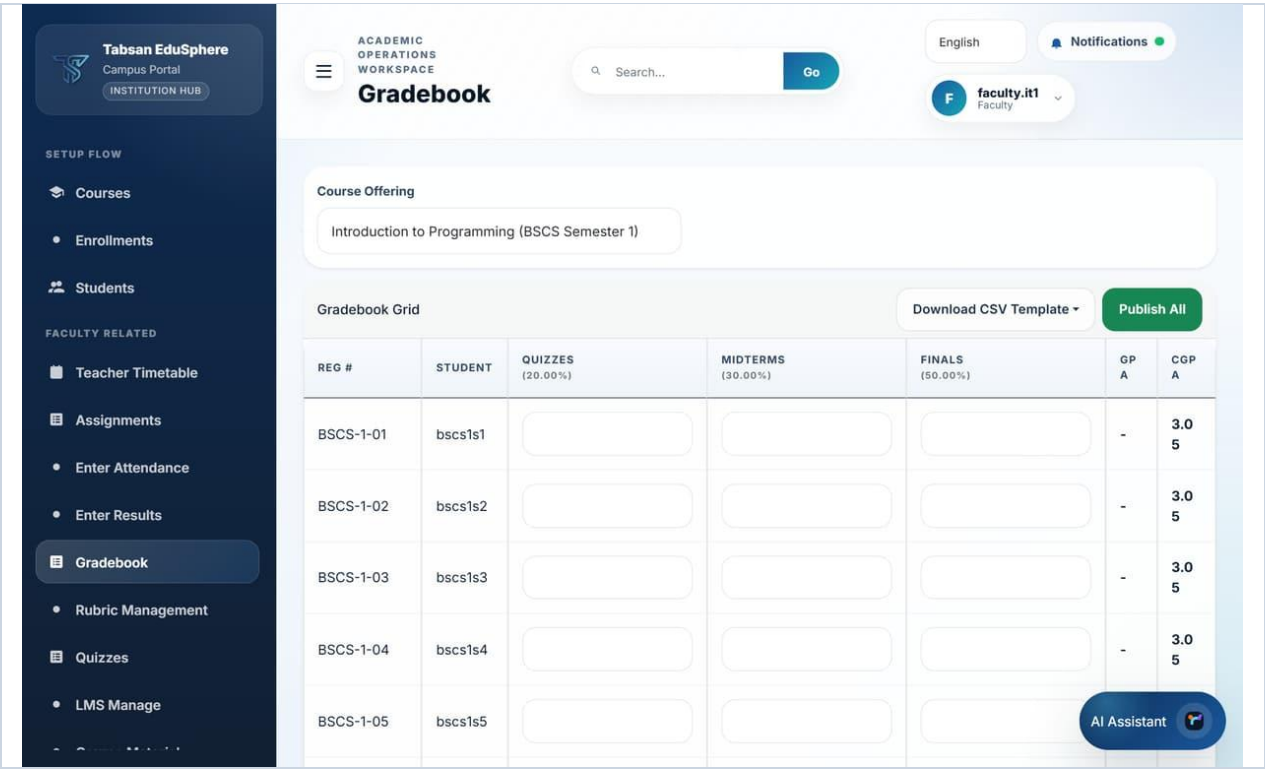

Figure 7.10 *Gradebook for a course offering*

7.6 Rubric Management

Available to: SuperAdmin, Admin, Faculty

A rubric is a marking guide: a list of criteria (for example Content, Structure, Referencing) and the performance levels for each, with points. Rubrics make grading fair and consistent and help students understand how they will be assessed.

Choose a **Course Offering**, enter a **Rubric Title**, then add the criteria and levels with their points. Rubrics are used when grading assignments.

© 2026 Tabsan Nexora. All rights reserved.

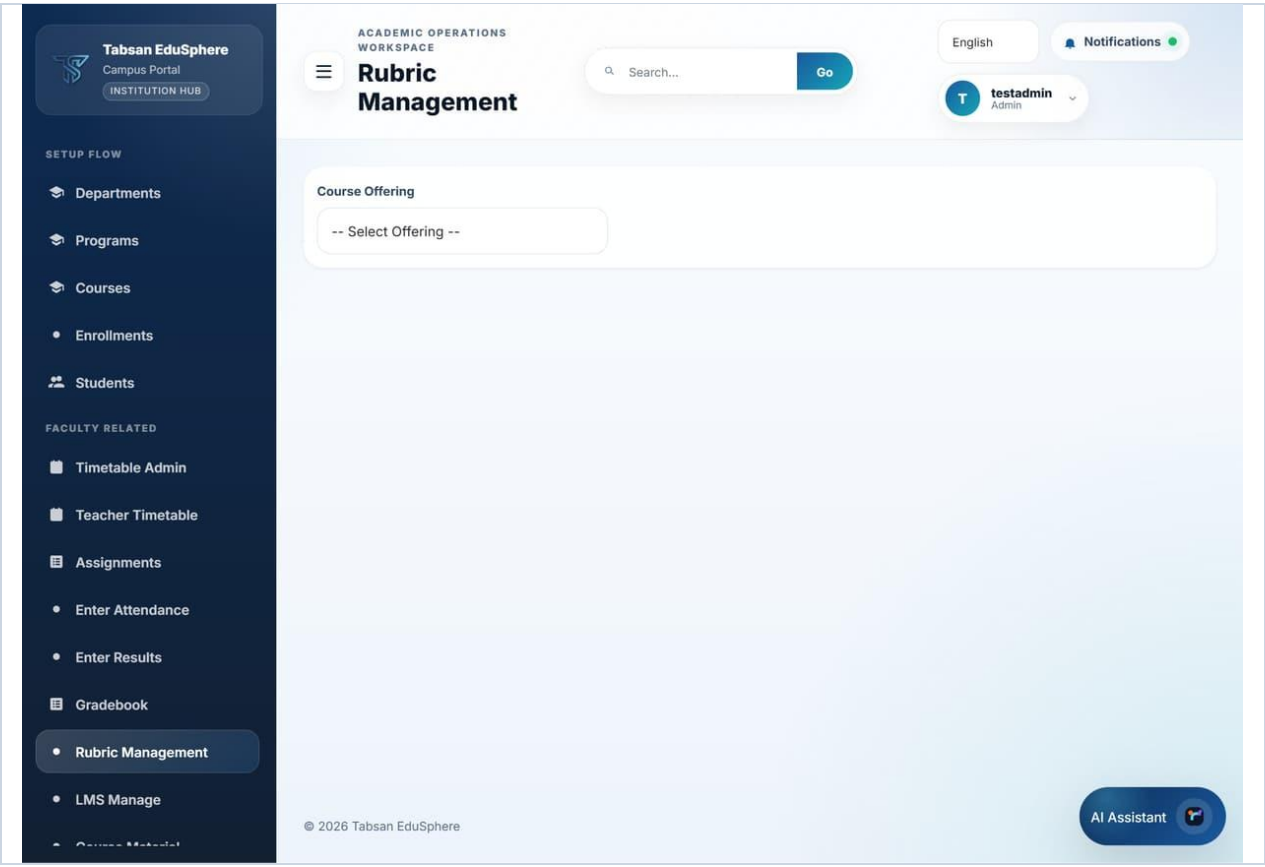

Figure 7.11 *Rubric Management*

7.7 Course modules (LMS Manage)

Available to: SuperAdmin, Admin, Faculty

LMS Manage builds a course's online content as **modules**, usually one per week or topic. A module has a title, a week number and an introduction, and holds **items** in the order students should follow them: text pages, web links, course materials, videos, assignments, quizzes, discussions, external tools, SCORM packages and headings.

Each item can have a **requirement** that completes it, and each module can have **release rules**: an opening date, prerequisites and "in order" progression. Students then always know what to do next, and teachers can see how far each student has got.

Before you start

- Create the assignments, quizzes and materials you want to add first; they can then be picked from lists.

Procedure

1. Open **LMS Manage** and choose the offering.
2. Under **Add New Module**, enter the **Title** and **Week #**, write the introduction, and click **Add Module**. Click **Publish** to make it visible to students (**Unpublish** hides it again while you edit).
3. Open the module's **Items** and use **Add an item** to add items in order. The form only asks for what each item type needs: **Text** for a page, a **Web address** for a link, or the assignment, quiz, discussion, tool or package to use. Click **Add item**.

© 2026 Tabsan Nexora. All rights reserved.

4. For each item choose **To complete it, students must**: view it, mark it as done, submit it, score at least a percentage (**Minimum score (%)**, from a posted grade or the best quiz attempt) or post in it (discussions).
5. Under **Release and completion**, optionally set **Opens on (UTC, optional)**, tick **Students must work through items in order**, choose whether the module is complete when students finish **every item with a requirement** or **any one item with a requirement**, and tick the modules under **Open only after these modules are complete**. Click **Save release settings**.
6. Use the arrows to reorder items, **Edit** to change one (untick **Visible to students** to hide it) and **Remove** to delete it.

Fields and options

Field	What to enter or choose
Item	Header, Page, Web link, Course material, Video, Assignment, Quiz, Discussion, External tool or SCORM package.
Title	Leave empty to use the name of the assignment, quiz or other item you picked.
To complete it, students must	Nothing, view it, mark it as done, submit it, score at least a minimum percentage, or contribute (discussions). Headers cannot have a requirement.
Indent	Indents the item under the header above it, to show structure.
Opens on (UTC, optional)	The module stays locked until this date and time.
Open only after these modules are complete	Prerequisite modules. A module cannot depend on itself in a loop.
Students must work through items in order	Each item unlocks only when the required item before it is complete.

© 2026 Tabsan Nexora. All rights reserved.

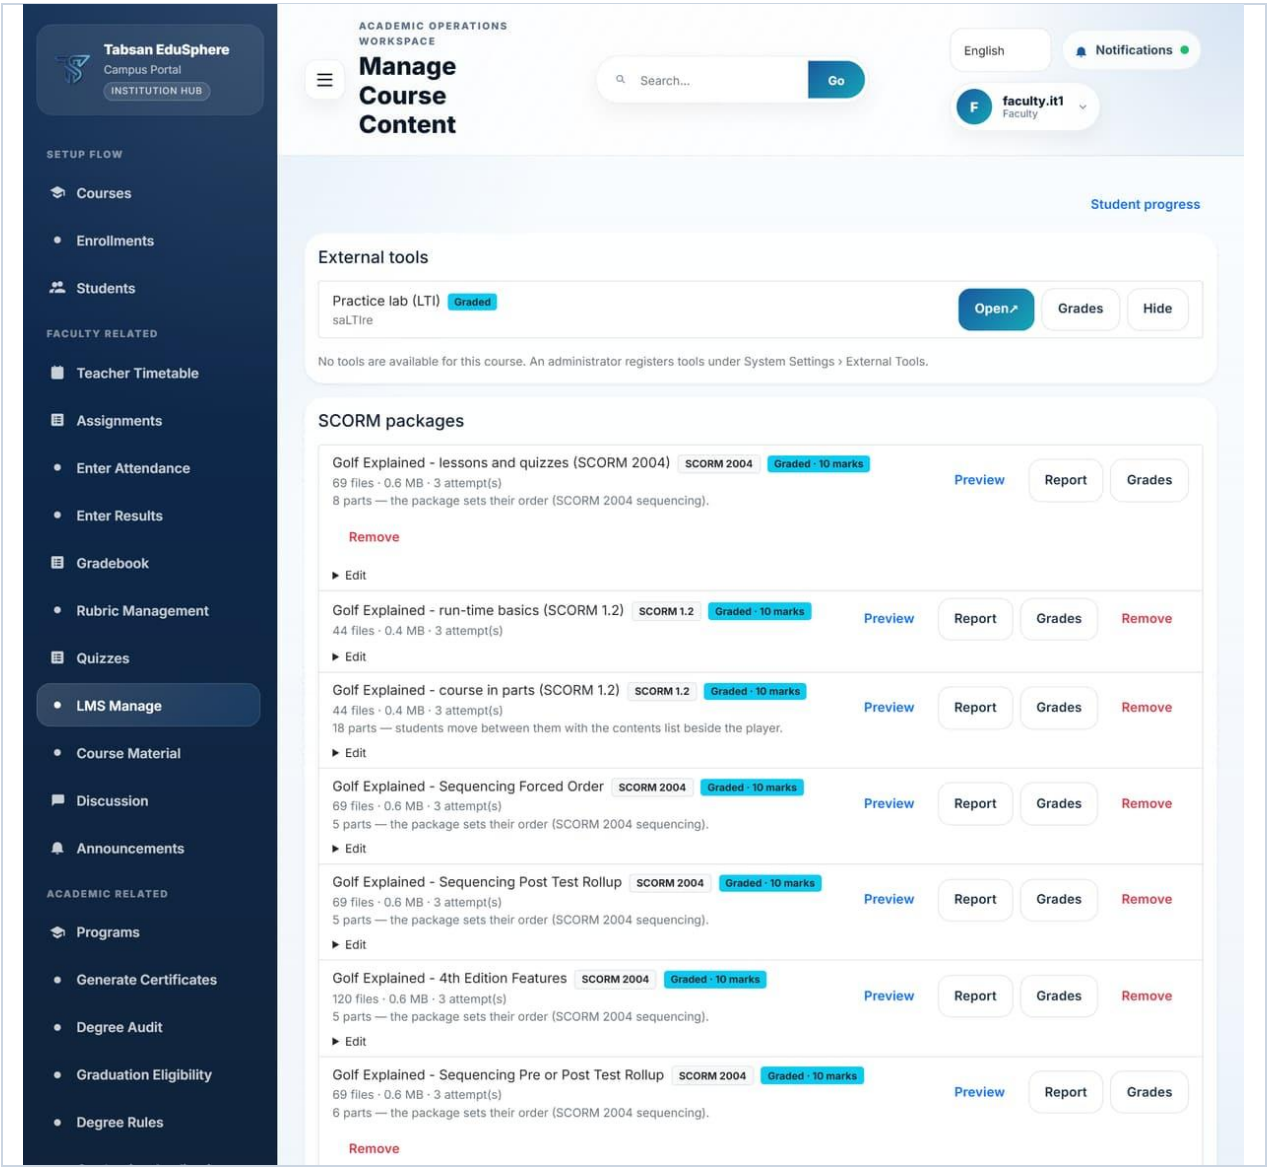

Figure 7.12 *LMS Manage: modules, items, requirements and release rules*

© 2026 Tabsan Nexora. All rights reserved.

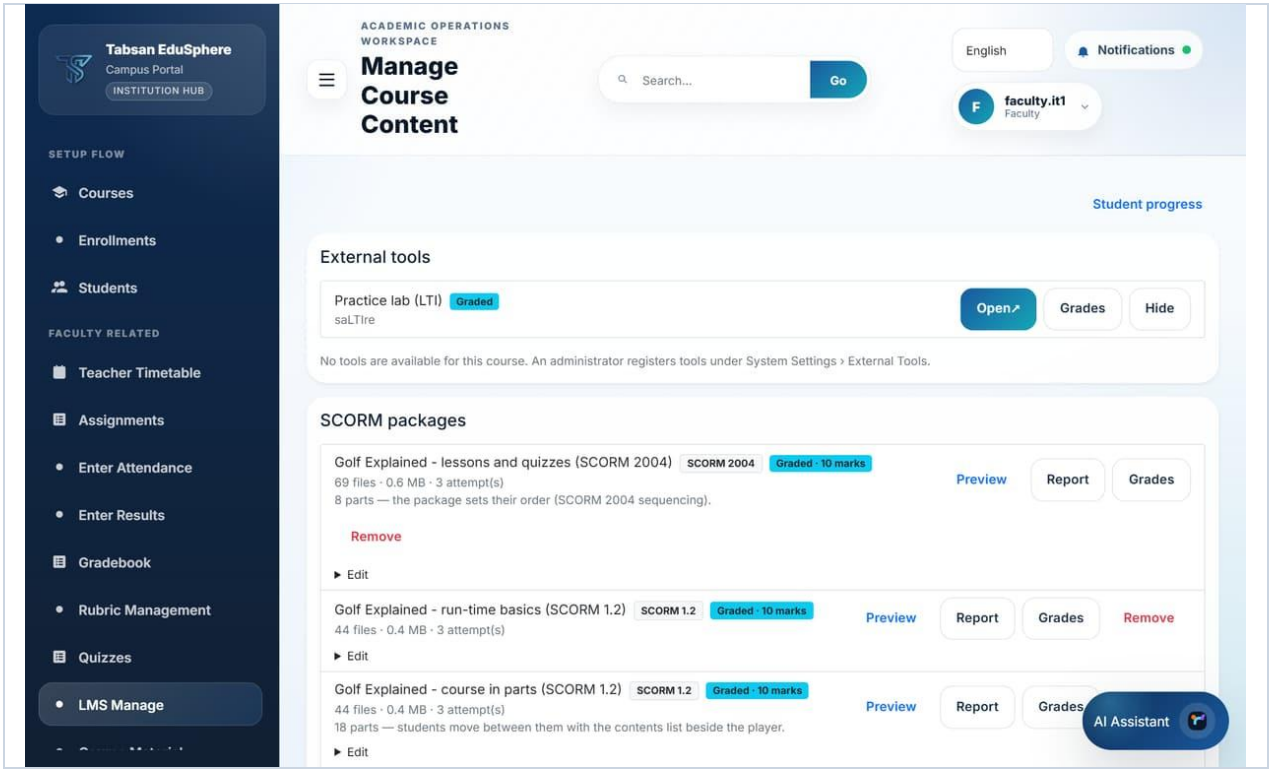

Figure 7.13 *External tools and SCORM packages on the same page*

What happens next

Students see the module on their **Course Content** page with each item's requirement and status. Locked quizzes, assignments and tools cannot be started or handed in until the module opens.

Changing an item's requirement re-checks it for everyone. Once a requirement is met it stays met, so a later regrade never locks a student out.

7.8 Module progress

Available to: SuperAdmin, Admin, Faculty

Module Progress (the **Student progress** link at the top of LMS Manage) lists every student in the course with their overall percentage and how many required items they have completed in each module. Click a student's name to see their item-by-item detail, including what is still to do and why an item is locked.

© 2026 Tabsan Nexora. All rights reserved.

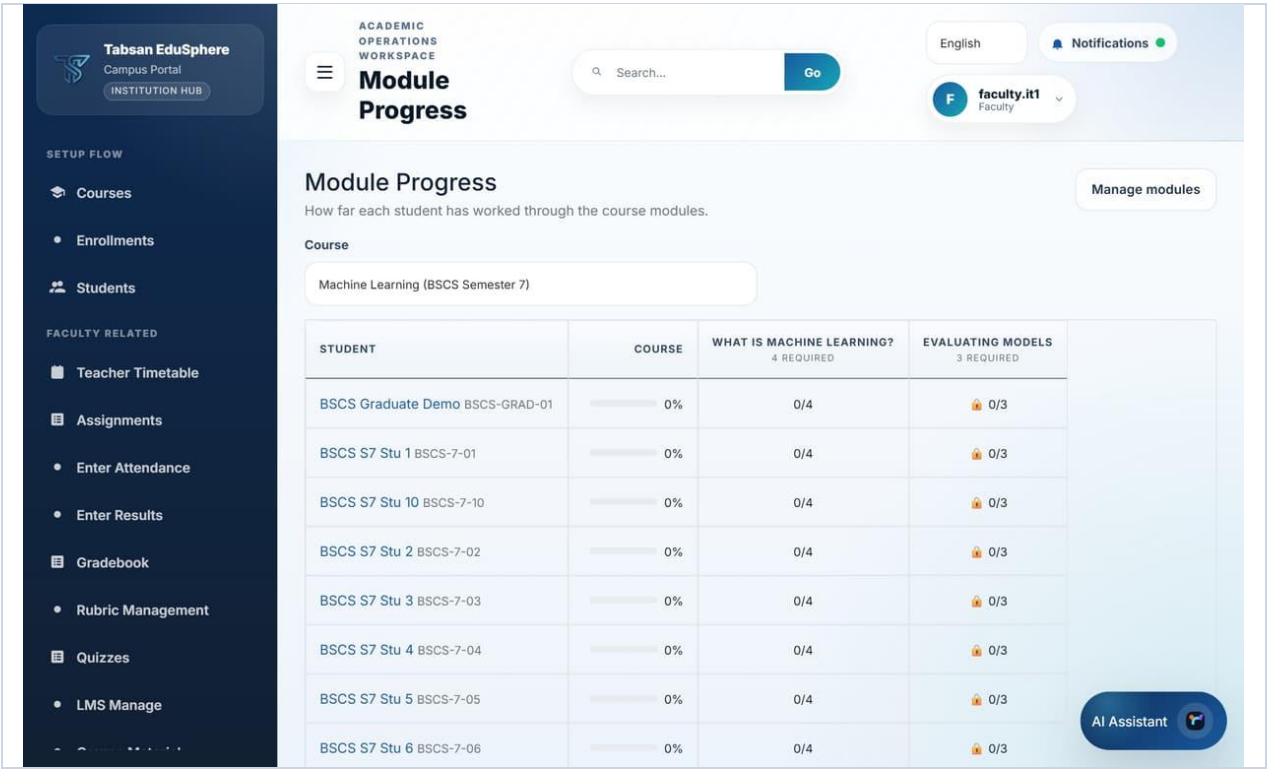

Figure 7.14 *Module Progress for a course*

Good to know

- Use it before a deadline to see who has not opened the week's material, and send them a reminder through Announcements or Discussion.

7.9 Course Content (students)

Available to: Student

Course Content shows a student's courses as modules, with their overall progress at the top. Choose the course in the **Course** box and click **Open**.

Each item shows a symbol: ✓ done, ○ still to do (with what is needed, for example "Submit" or "Score at least 60%"), and 🔒 locked, with the reason, such as "Complete Week 1 first" or an opening date.

Procedure

1. Open **Course Content**, choose the course and click **Open**.
2. Work through the items in order. Click an item to open it; pages, links, files and videos open inside the portal, while assignments, quizzes, tools and packages open their own pages.
3. At the top of an item use **‹ Previous** and **Next ›** to move through the module, and **Mark as done** where the item asks for it.

© 2026 Tabsan Nexora. All rights reserved.

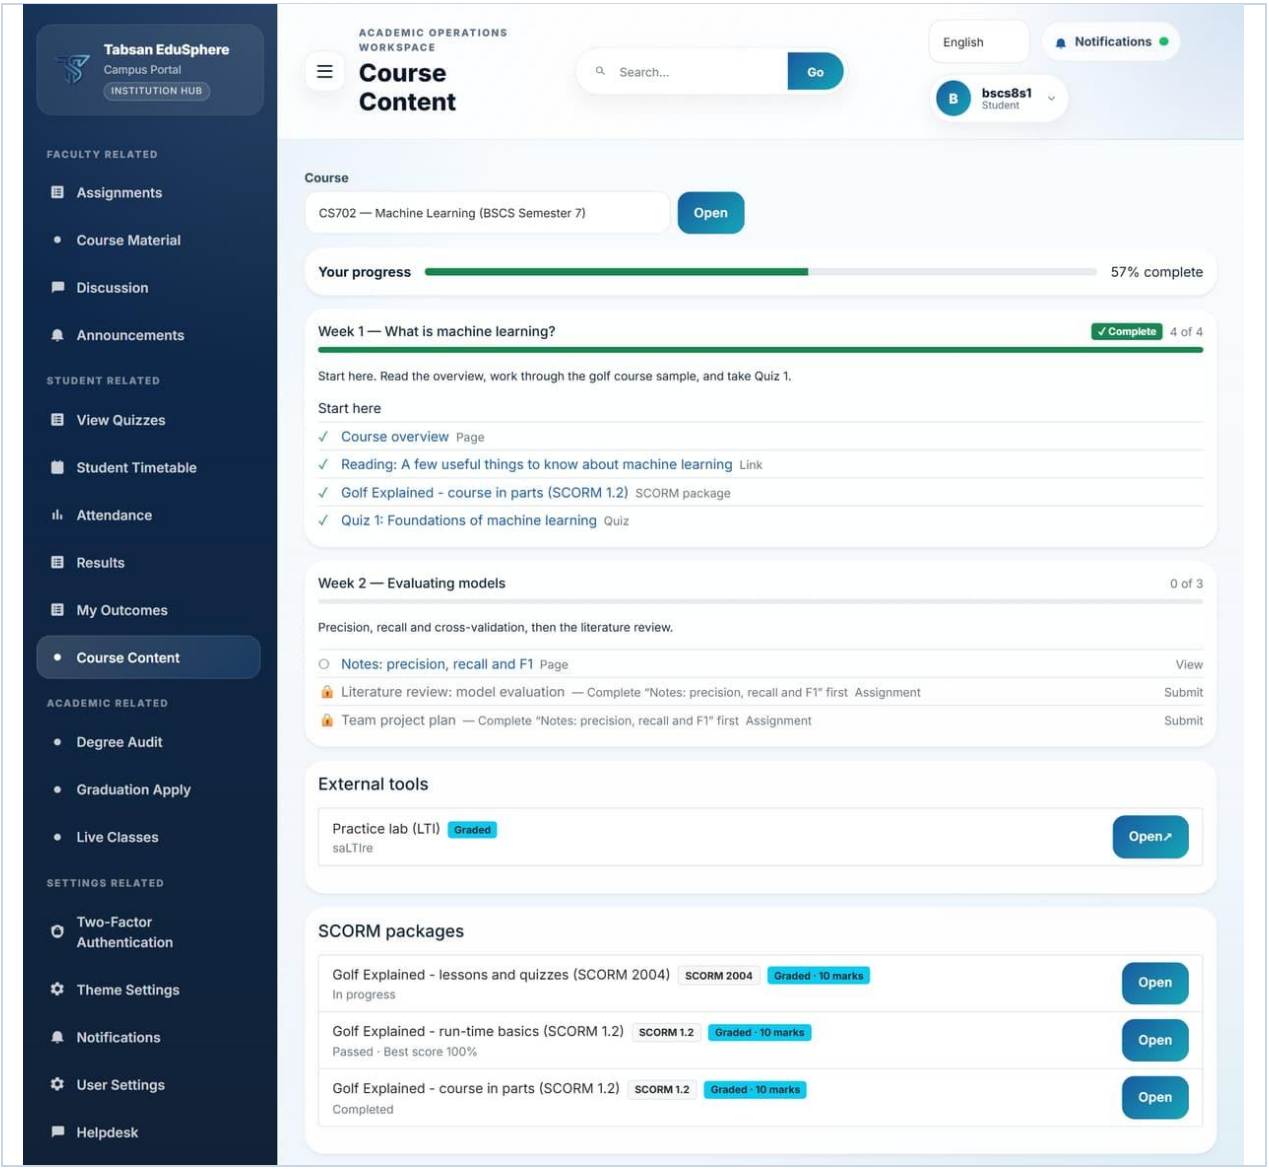

Figure 7.15 *Course Content: progress, modules and item requirements*

© 2026 Tabsan Nexora. All rights reserved.

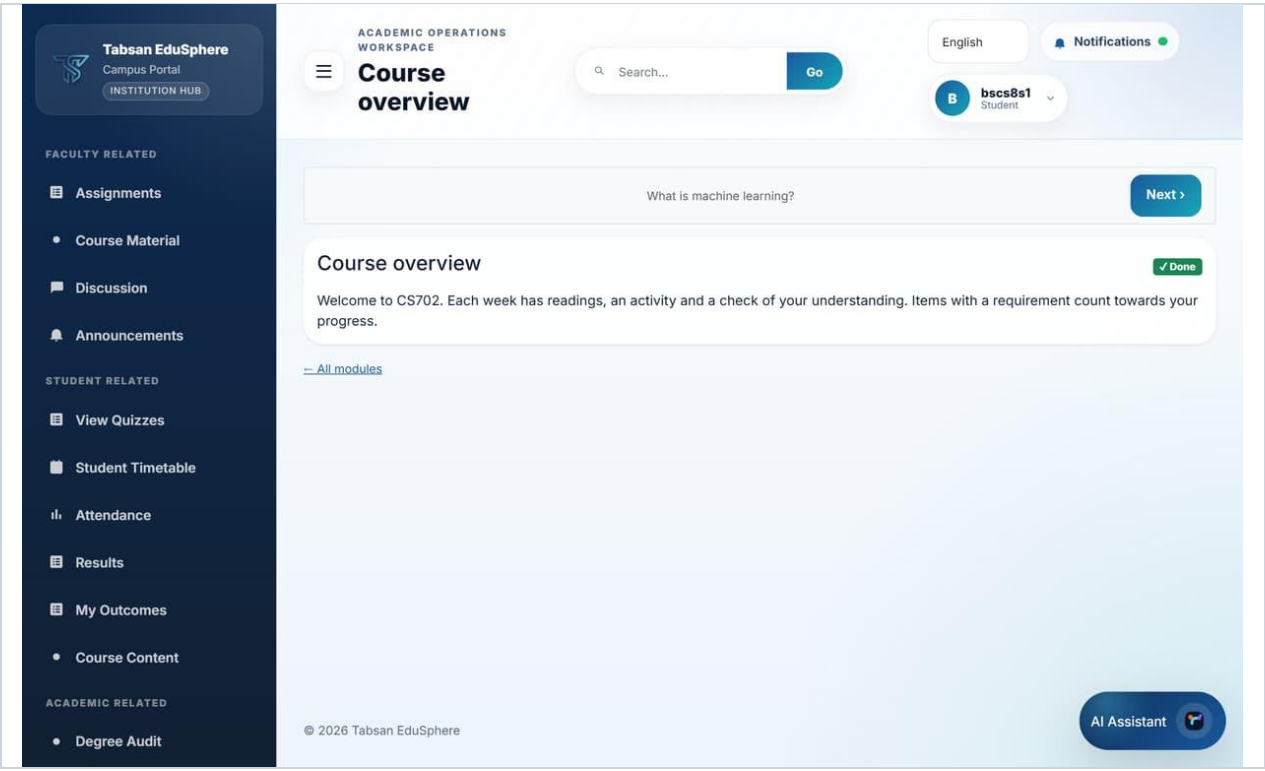

Figure 7.16 *An item open, with Previous and Next*

Good to know

- The course page also links to the course's Discussion, Announcements, Live classes and My groups.

7.10 Live classes

Available to: SuperAdmin, Admin, Faculty, Student

Live Classes schedules online classes for a course. A class can use a meeting link the teacher pastes (Google Meet, Jitsi, any Zoom or Teams link), or the institution's connected service (BigBlueButton, Zoom or Microsoft Teams) creates the meeting automatically. Students are notified when a class is scheduled, moved or cancelled, and reminded 15 minutes before.

Joining through the portal can mark attendance: about 10 minutes after the class ends, students who joined (and stayed the minimum time, where the service reports it) are marked Present and the others Absent. Students who already have an attendance mark for that day keep it.

Procedure

1. Faculty: open **Live Classes** and choose the course.
2. Under **Schedule a class**, enter the **Title**, the start date and time (UTC), the length in **Minutes**, an optional description and, if your institution has no meeting service, the **Meeting link**.
3. Tick **Mark attendance from who joined** and set the **Minimum minutes** if attendance should be recorded automatically, then click **Schedule**.
4. To schedule a whole term at once, use **From the timetable**: pick the course's timetable slot and the number of weeks; weeks already scheduled are skipped.

© 2026 Tabsan Nexora. All rights reserved.

5. At class time click **Start / join** (you join as the host). **Attendance** shows who joined, and **Mark attendance now** records it immediately. **Edit** and **Cancel** notify the students; **Add to calendar** downloads a calendar file.
6. Students: open **Live Classes** (or the course page) and click **Join** from 15 minutes before the start. While a class is running, a **Live now** banner with **Join** appears on every page.

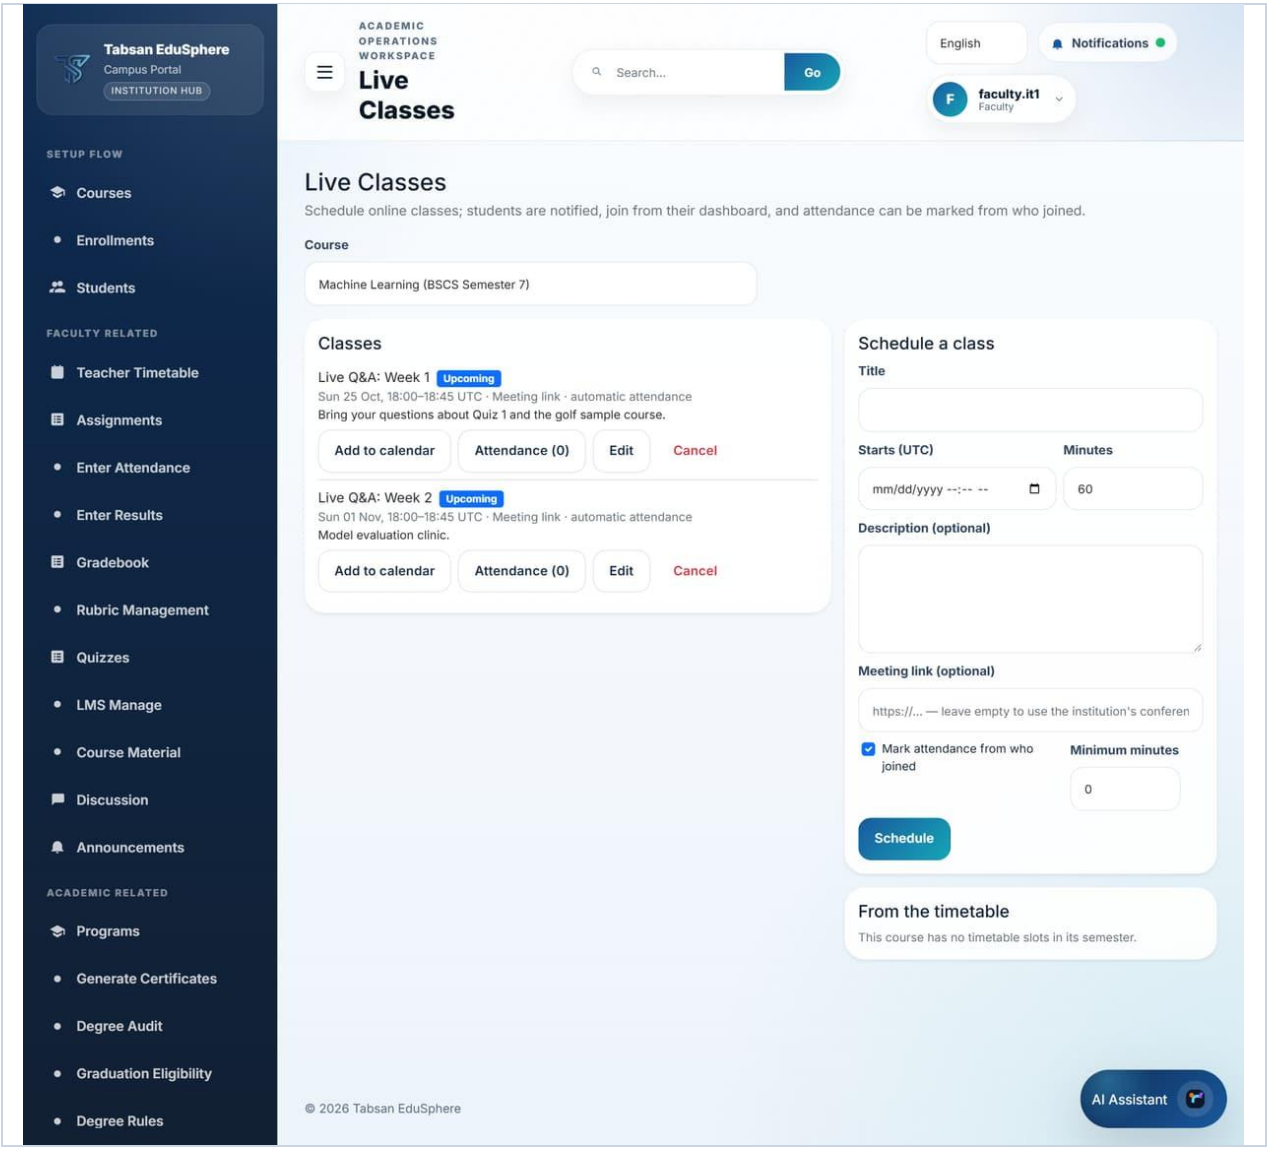

Figure 7.17 *Live Classes (Faculty): scheduled classes and the scheduling form*

© 2026 Tabsan Nexora. All rights reserved.

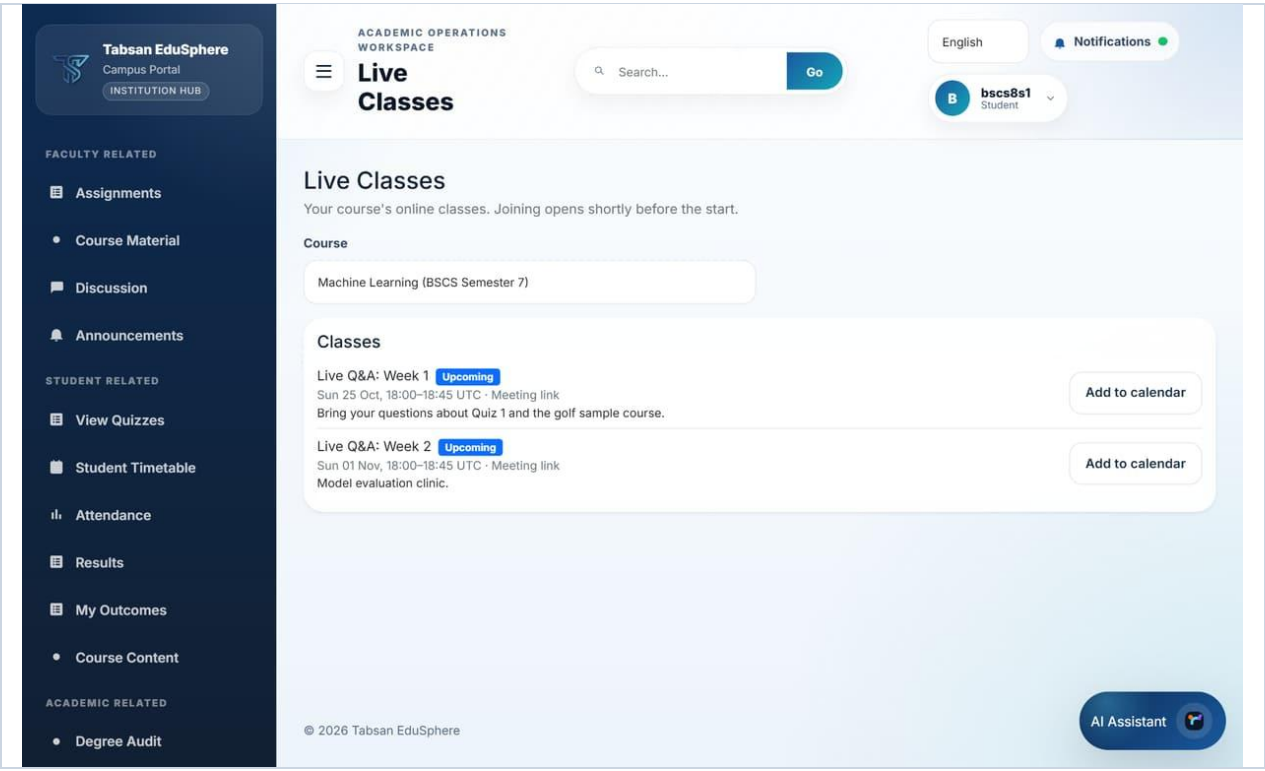

Figure 7.18 *Live Classes (Student)*

Good to know

- Recordings appear on the class when the meeting service provides one.
- An Admin or SuperAdmin connects the meeting service in Live Class Settings (Chapter 16).

7.11 External tools (LTI) in a course

Available to: SuperAdmin, Admin, Faculty, Student

External tools are other learning applications registered by your institution (Chapter 16), such as interactive content, video, coding or plagiarism tools. They open from the course without a second sign-in, using the LTI 1.3 standard, and graded tools send scores back to EduSphere.

Procedure

1. Faculty: open **LMS Manage** for the course and find **External tools**.
2. Click **Add an external tool**, choose the tool, enter a **Title**, choose where it opens (**New tab** or **Inside EduSphere**) and, for a graded activity, the **Points**. A graded item creates an assignment that receives the tool's scores automatically.
3. Or click **Choose content from** the tool to pick content inside the tool itself (for example one activity); it is added to the course, with an assignment for anything the tool grades.
4. Use **Hide** / **Show** to control visibility, and **Grades** to open the grading workspace, where you can still adjust or post the grades.
5. Students: click **Open** on the item on the course page or in a module. You are signed in to the tool automatically.

© 2026 Tabsan Nexora. All rights reserved.

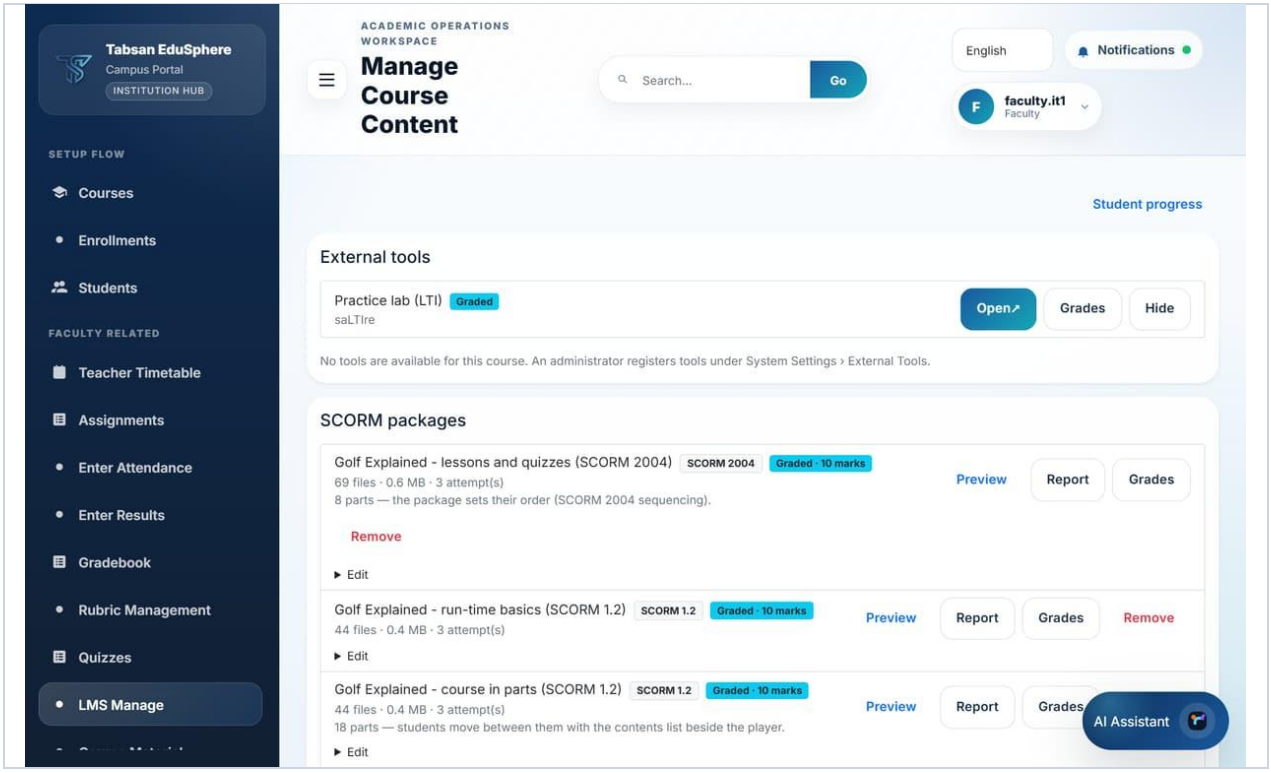

Figure 7.19 *External tools and SCORM packages in LMS Manage*

Good to know

- If a tool shows a blank frame inside EduSphere, set it to open in a new tab.
- If a tool says the launch has expired, go back to the course and click Open again.

7.12 SCORM packages

Available to: SuperAdmin, Admin, Faculty, Student

SCORM packages are interactive lessons exported from authoring tools such as Articulate Storyline or Rise, iSpring, Adobe Captivate or Lectora, as a SCORM 1.2 or SCORM 2004 zip file. EduSphere plays them inside the portal and records each learner's progress, status, score and time, and can send the best score to the gradebook.

A package may have several parts (for example one lesson per topic, then a quiz). Students then see a contents list beside the lesson showing each part's status, and move between parts with it or with **Previous** and **Next**. The package is complete when every part is; its score is the average of the parts' scores.

Some SCORM 2004 packages set their own order (**sequencing**). The package then decides which part opens next: it can keep parts locked (shown with a padlock) until earlier ones are passed, send a learner back to a lesson after a failed quiz, pick a random test, or allow only a set number of tries at a test. For such packages the player shows "This package sets the order" above the contents; **Next** and **Previous** ask the package what comes next, and the contents list opens only the parts the package allows (point at a locked part to see why). When there is nothing more to open, the player says "You have reached the end of this package". The package's own rules also decide whether it is completed or passed, and its score.

© 2026 Tabsan Nexora. All rights reserved.

A SCORM 1.2 package can make a part depend on others (prerequisites): that part stays locked until they are done.

Procedure

1. Faculty: open **LMS Manage** for the course and, under **SCORM packages**, click **Upload a SCORM package**.
2. Choose the zip file, and set the allowed **attempts** (0 = unlimited), whether it is **Graded** (the best score goes to the gradebook, scaled to the marks you set) and whether students can see it. Click **Upload**.
3. Click **Preview** to try it yourself (nothing is recorded) and **Report** to see each student's attempts, status, best and last score and time. Add the package to a module with a requirement such as "Score at least 80%".
4. Students: open the package from the course page or its module and click **Start**. Your place is saved: **Continue** takes you back where you stopped. Use **Exit** on the player page to leave (your progress is saved first).
5. When you finish, the package opens again for **Review**; if more attempts are allowed, **Start a new attempt** – your best score counts.

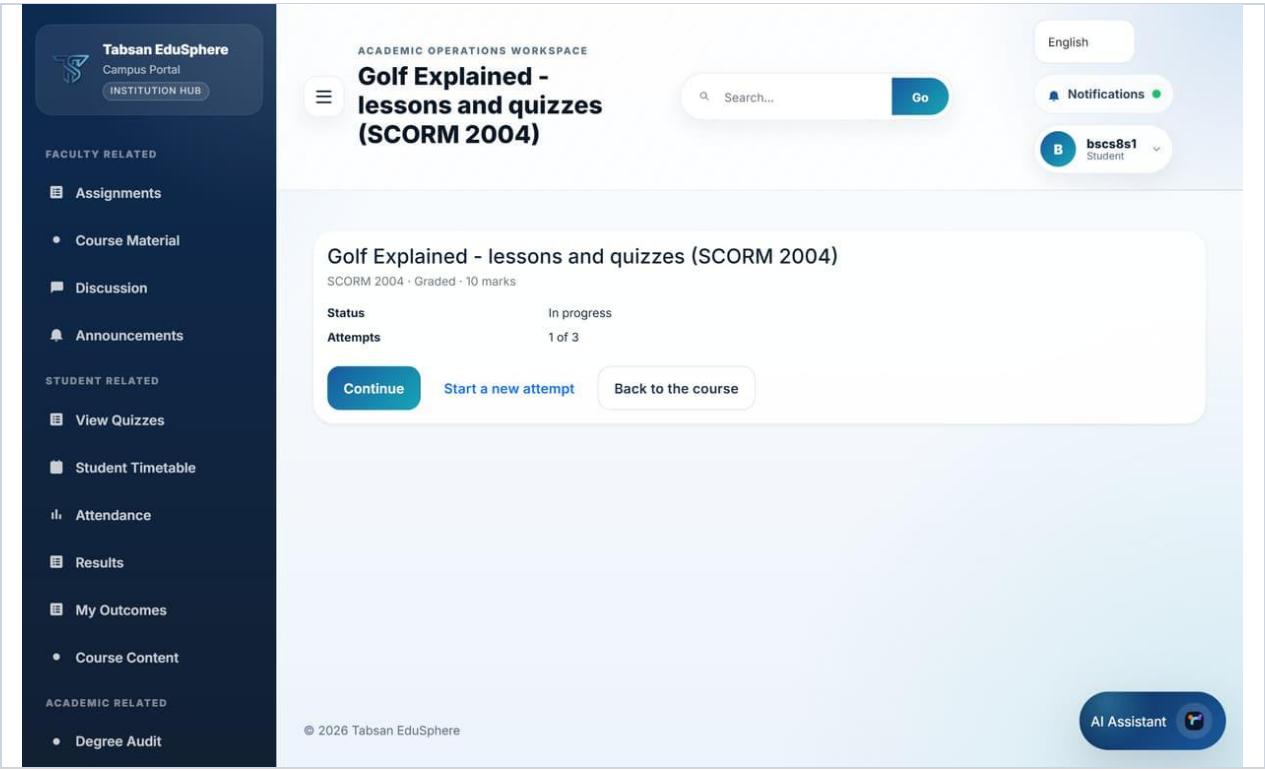

Figure 7.20 *A student's SCORM package page*

© 2026 Tabsan Nexora. All rights reserved.

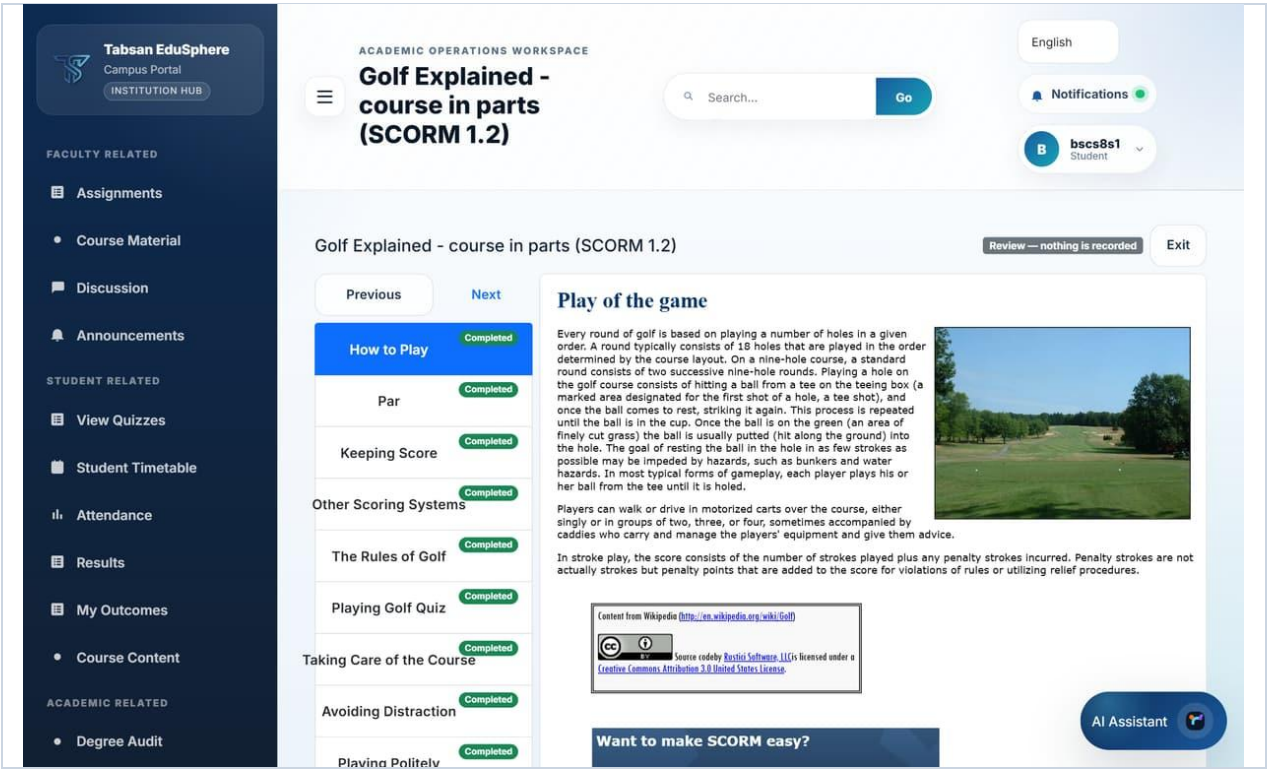

Figure 7.21 *A package in parts: contents list with each part's status*

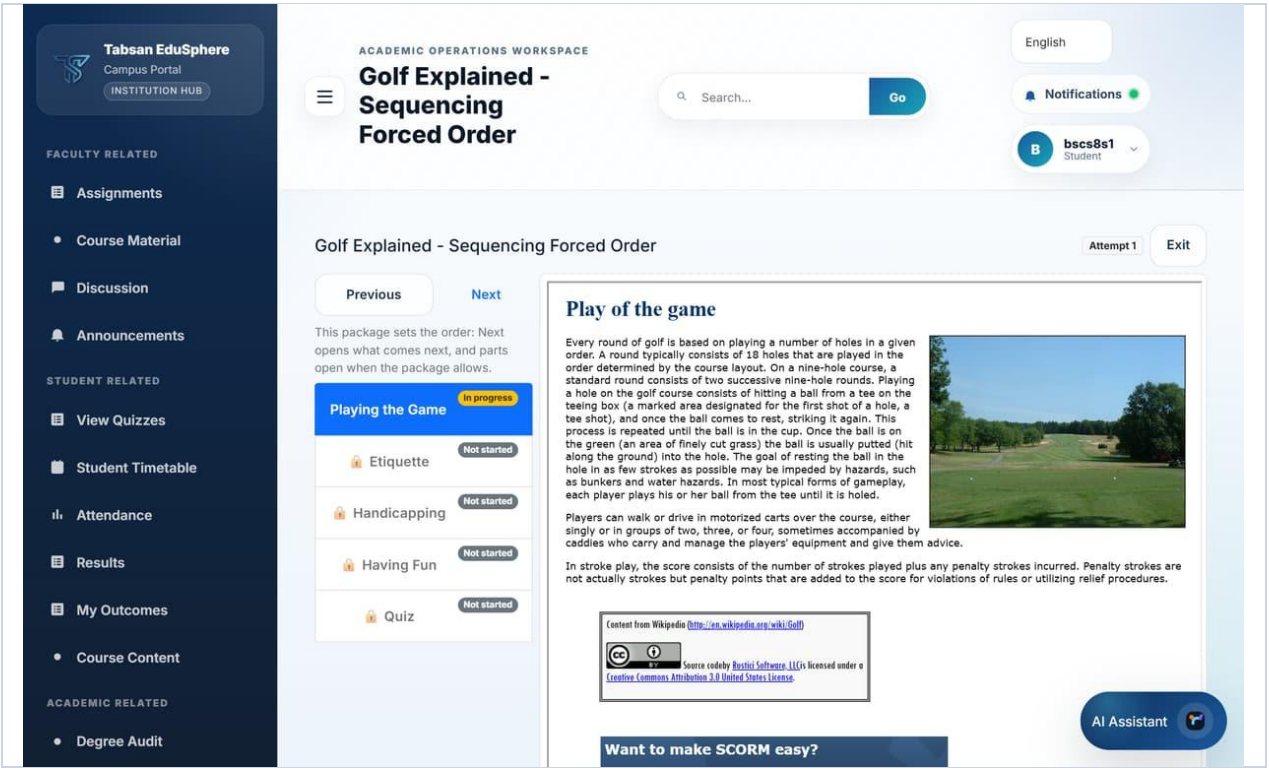

Figure 7.22 *A package that sets its own order: locked parts open when the package allows*

© 2026 Tabsan Nexora. All rights reserved.

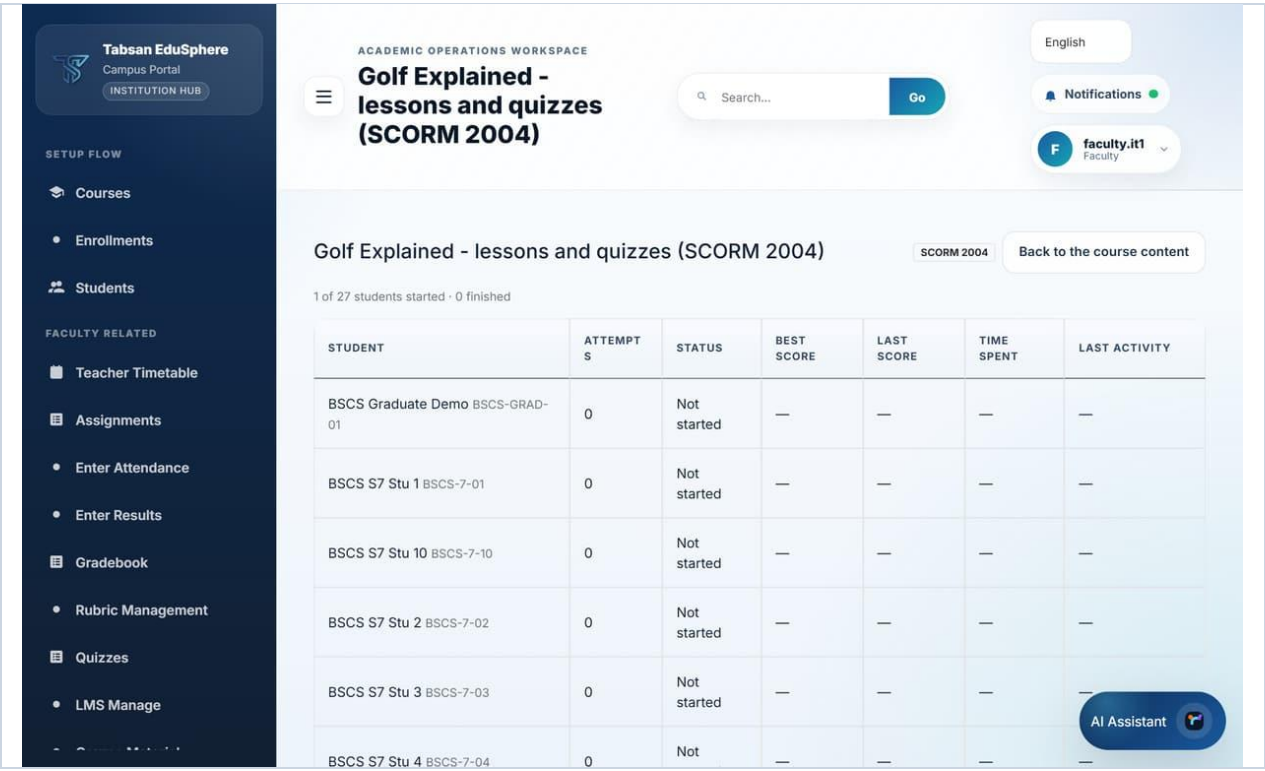

Figure 7.23 *SCORM package report (Faculty)*

Good to know

- Packages up to 500 MB are accepted by default. A package that links to content on other websites, or whose files are missing, is refused with an explanation.
- Packages run in an isolated area so their scripts cannot read portal pages or cookies.
- Pages in a package that do not report to the portal (assets) count as complete once opened. A package of such pages only has no score.
- Packages uploaded before parts and sequencing were supported are read again automatically, so their parts and order rules apply without uploading them again; progress already made is kept.
- **Preview** and **Review** open any part freely, whatever order the package sets.
- If the player says a part could not be opened just now, reload the page – your progress is saved.

7.13 Course Material

Available to: SuperAdmin, Admin, Faculty, Student

Course Material is a library of files and links for each subject: lecture slides, notes, past papers or useful websites. Teachers add material; students browse and download it.

Procedure

1. Open **Course Material** and set the filters (department, program, semester, subject/course), then click **Apply Filters**.
2. Click **Add Material**. Choose the **Type**, enter a **Title** and **Description**, and either upload a file or enter an **External URL**.
3. Save. The material appears in the list for that subject.

© 2026 Tabsan Nexora. All rights reserved.

4. Untick **Active only** to see material that has been withdrawn, and use the row actions to edit or withdraw an item.

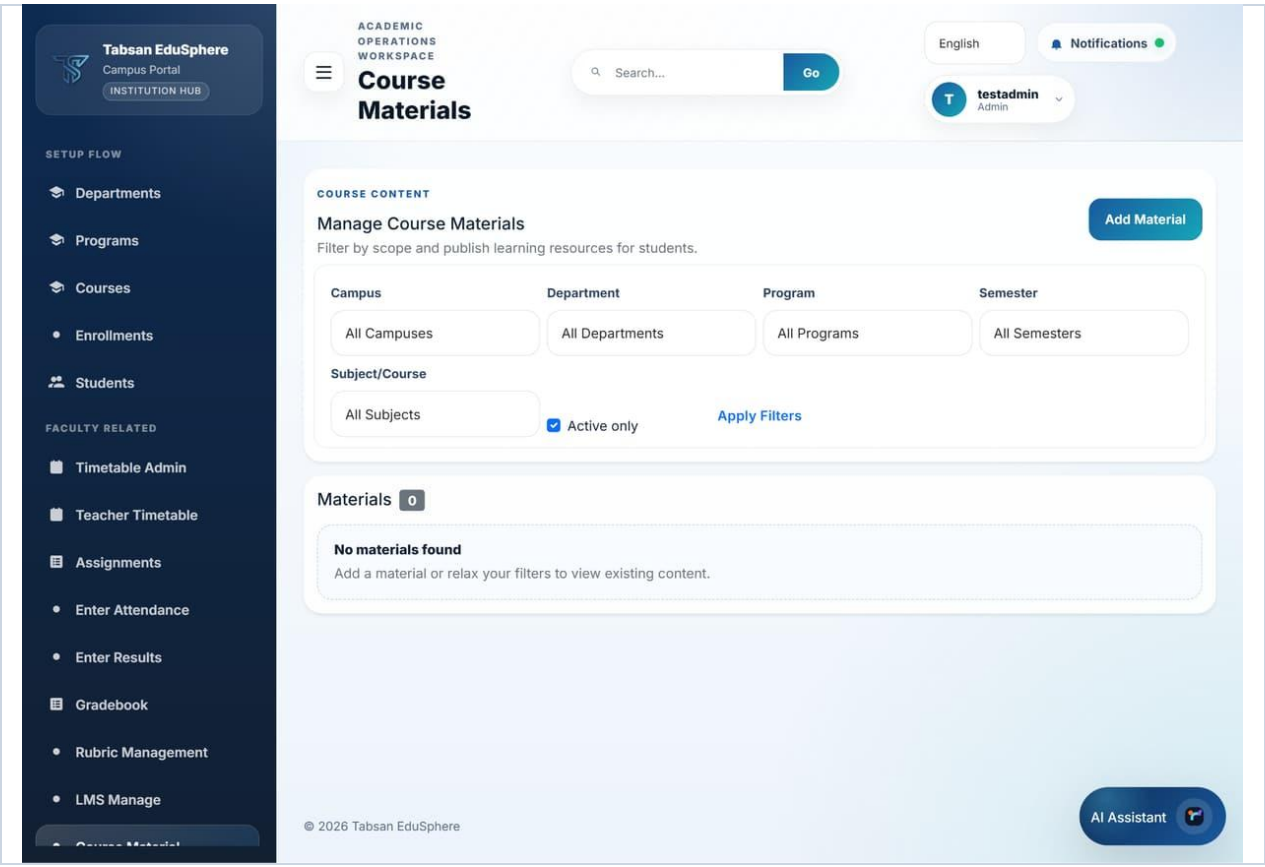

Figure 7.24 *Manage Course Materials*

© 2026 Tabsan Nexora. All rights reserved.

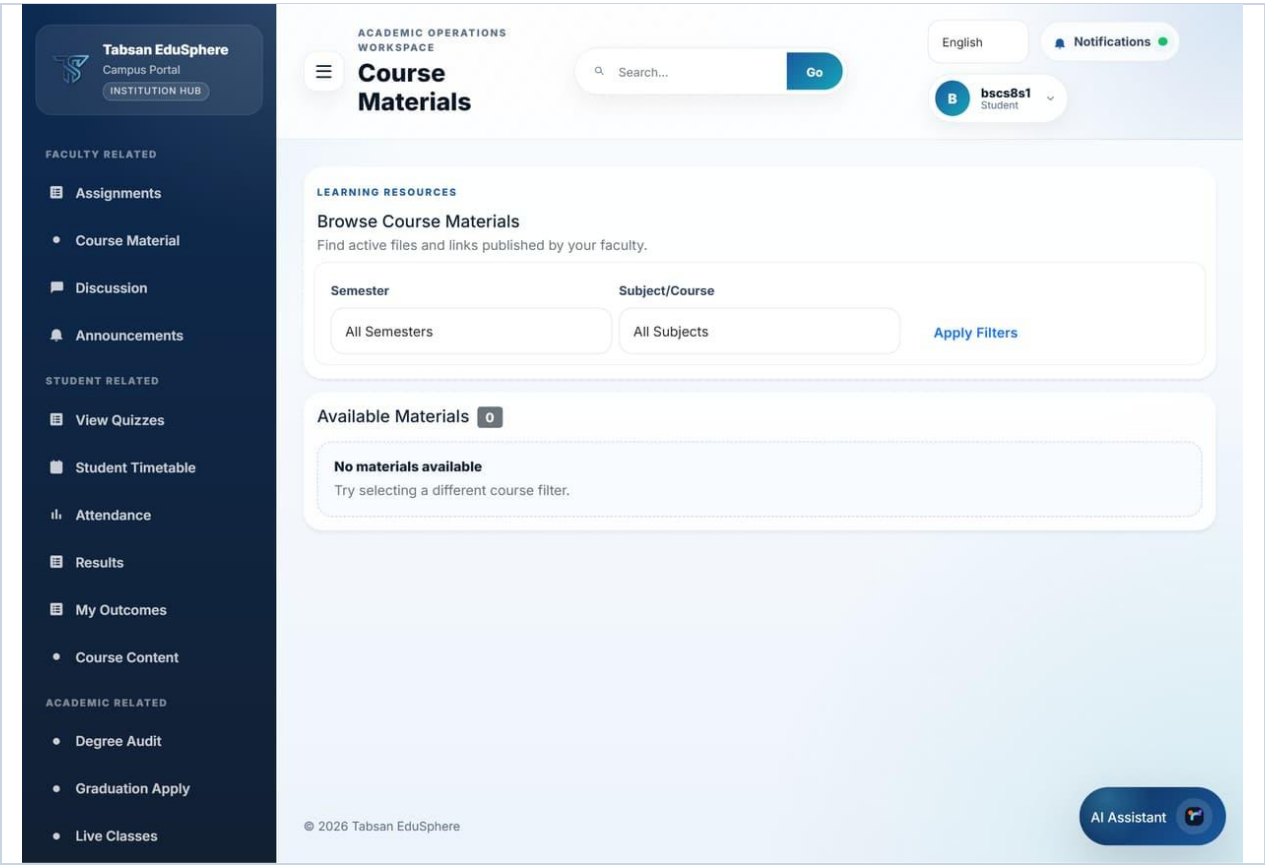

Figure 7.25 *Browse Course Materials (Student)*

Good to know

- Students see the material published for the subjects of their department; inactive material is hidden from them.

7.14 Discussion

Available to: SuperAdmin, Admin, Faculty, Student

Discussion is a question-and-answer board for each offering. Students can ask questions, classmates and teachers can reply, and a teacher can mark a thread as resolved once it has been answered, which helps others find the answer later.

Procedure

1. Open **Discussion** and choose the offering.
2. Under **Start a New Thread**, type your question and click **Post**.
3. Open a thread to read the replies, add your own reply, or (teachers) mark it solved or unresolved.

© 2026 Tabsan Nexora. All rights reserved.

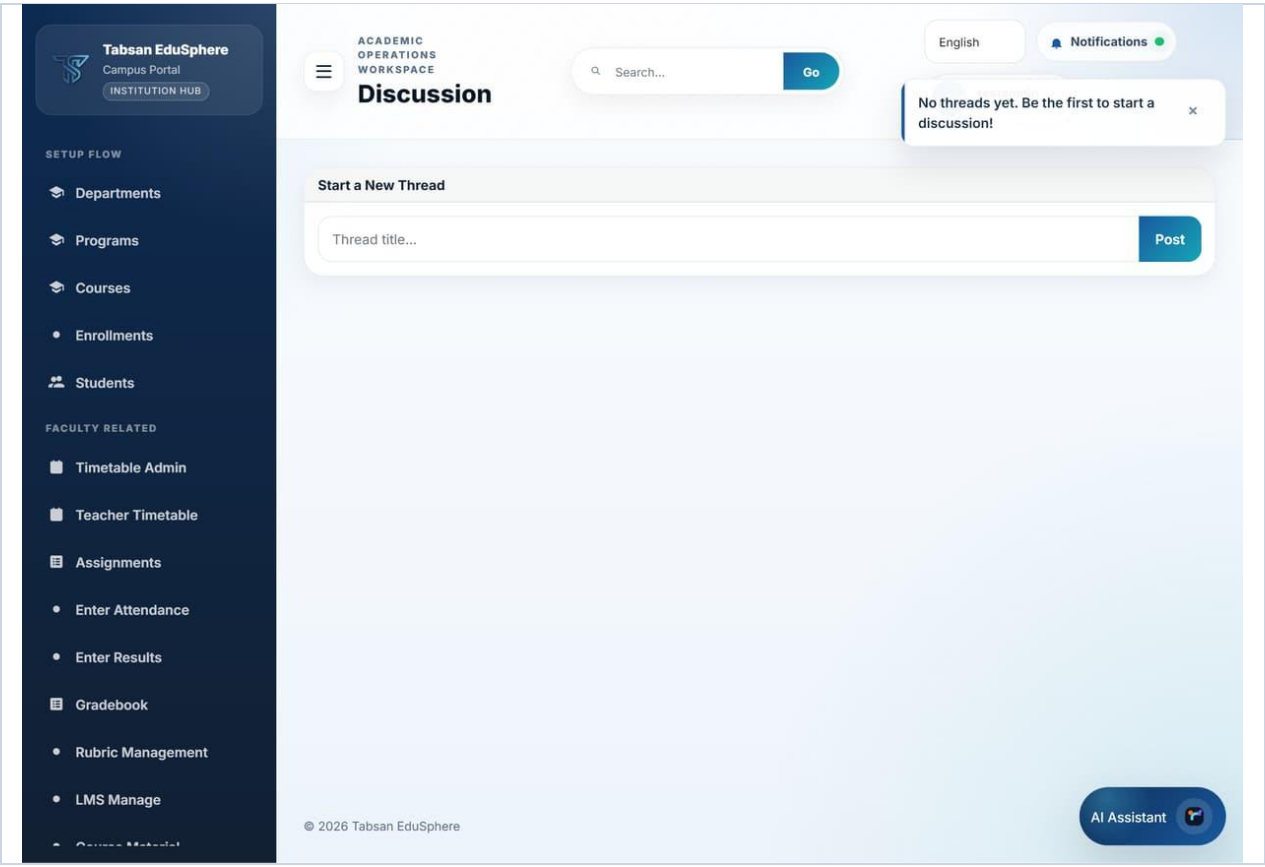

Figure 7.26 *Discussion*

7.15 Announcements

Available to: SuperAdmin, Admin, Faculty, Student

Announcements publish notices, such as a room change or an exam reminder, to a whole department or to a single course offering. Students see announcements for the courses they take.

Procedure

1. Open **Announcements**.
2. Choose a **Department** and, optionally, a **Course Offering**, then click **Apply** to see announcements in that scope.
3. Staff: under **Post Announcement**, enter the title and message and click **Post**. With only a department chosen, the announcement goes to every offering in that department.
4. Use **Deactivate** to hide an announcement without deleting it, or **Delete** to remove it permanently. Tick **Show inactive** to see hidden announcements.

© 2026 Tabsan Nexora. All rights reserved.

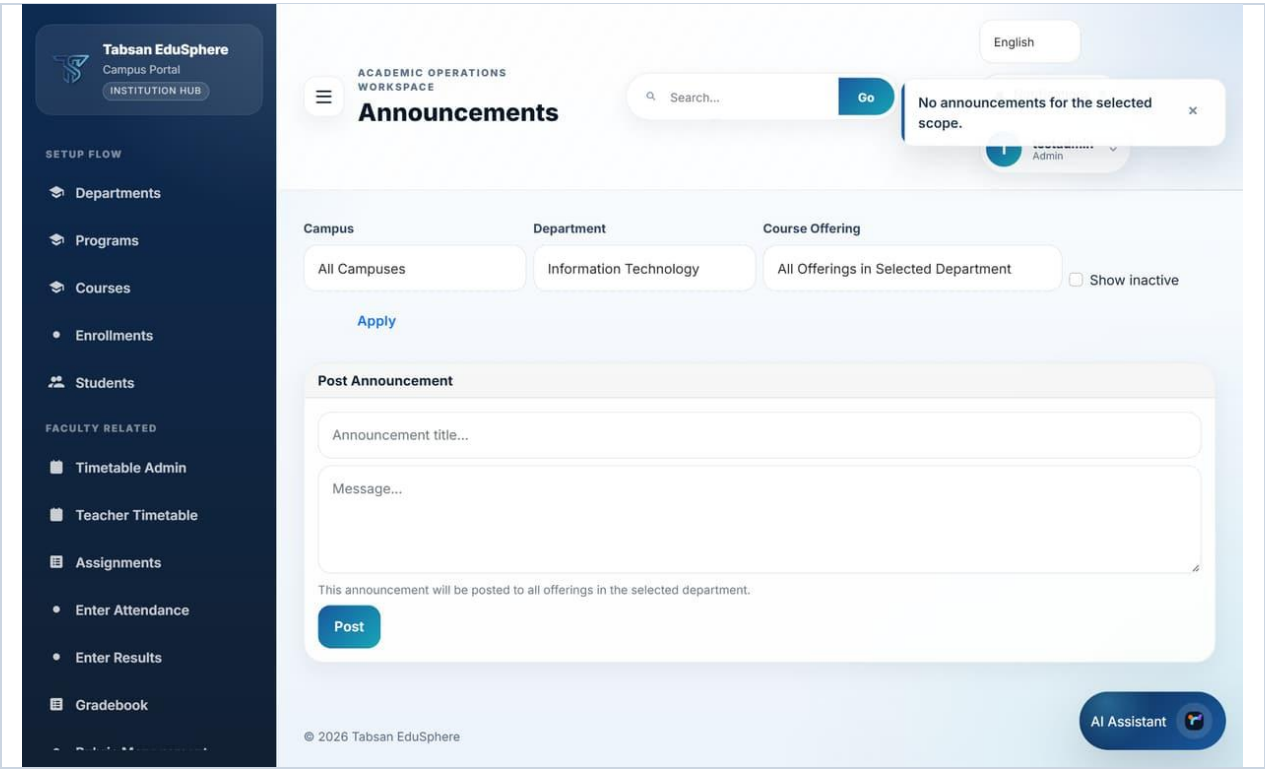

Figure 7.27 *Announcements for a department*

NOTE An announcement posted to a whole department reaches every course offering in it. It is listed once with an "N offerings" label, and Deactivate or Delete applies to all of those offerings together.

© 2026 Tabsan Nexora. All rights reserved.

8 Quizzes and Assessment

This chapter covers online quizzes, from building them and drawing questions from banks to marking and statistics, and the marking side of assignments: the grading workspace, late and missing work, personal due dates, group work, peer review and similarity checking.

The screenshots use the CS702 Machine Learning course of the demonstration data, taught by faculty.it1.

8.1 Quizzes

Available to: SuperAdmin, Faculty; students take quizzes in View Quizzes

A quiz is an online test with questions marked automatically wherever possible. A quiz has instructions, an optional time limit, a number of attempts (the best counts) and an optional opening and closing date. Quiz scores go to the course gradebook.

The **Quizzes** page lists the quizzes of a course with their number of questions and attempts, and links to **Questions & settings** (the quiz builder), **Attempts & grading** and **Statistics**.

Procedure

1. Open **Quizzes** and choose the course in **Select Course Offering**.
2. Click **+ Create Quiz**, enter the **Title**, **Instructions**, **Time Limit (minutes)** (blank for no limit), **Max Attempts** and, optionally, when it opens and closes. Save.
3. Click **Questions & settings** to add the questions and choose the delivery options (next section).
4. Click **Publish** when the quiz is ready. Students see it in **View Quizzes**. Use **Deactivate** to close it early, or **Delete** to remove a quiz nobody has taken.

© 2026 Tabsan Nexora. All rights reserved.

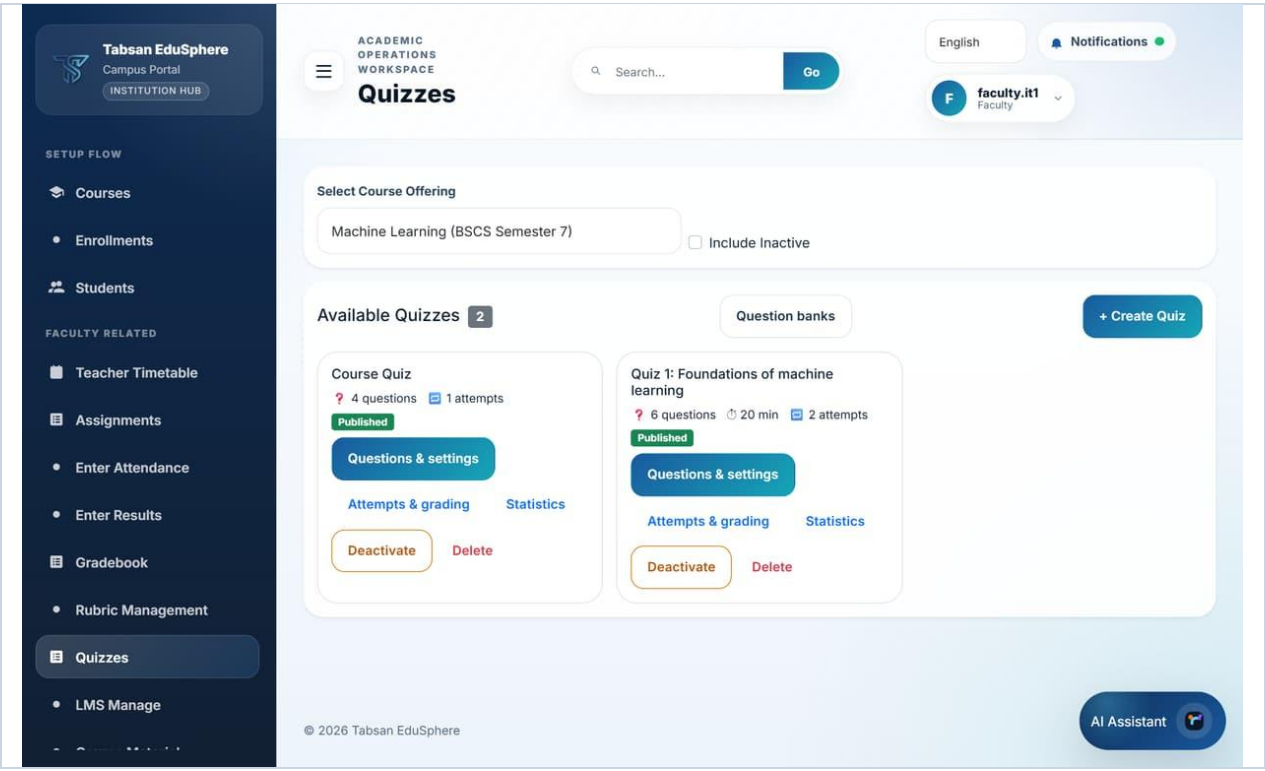

Figure 8.1 *Quizzes of a course*

Good to know

- Tick **Include Inactive** to see closed quizzes.
- Quizzes created before the quiz engine was upgraded keep working and can be edited in the same builder.

8.2 Building a quiz

Available to: SuperAdmin, Faculty

The quiz builder shows the questions on the left and the delivery settings on the right. Changes apply to attempts started after you save; to rescore attempts already finished, use **Regrade** (see Quiz statistics).

Procedure

1. Under **Add a question**, choose the **Question type**, the **Marks** and the **Position**, type the **Question**, and fill in what that type needs (answer options, pairs, blanks, the correct number and so on). Click **Add question**.
2. To use a question bank, add a **group**: choose the bank, how many questions to pick and the marks for each. Every student gets a different random selection. Or copy chosen bank questions into the quiz.
3. Under **Delivery & security**, choose whether to shuffle questions and answer options, show one question at a time, and lock answers once saved. Optionally set an **Access code** and **Allowed networks**.
4. Under **After submitting, students see**, choose nothing, the score only, their answers, or their answers and the correct answers, and whether answers appear only after the quiz closes. Click **Save settings**.

© 2026 Tabsan Nexora. All rights reserved.

5. Under **Extra time & attempts**, give a student a time multiplier (for example 1.5 ×), extra minutes or extra attempts, for this quiz or every quiz in the course. Under **Different dates for one student**, give a student their own opening and closing dates.
6. Click **Outcomes** on a question to align it with learning outcomes (Chapter 9).

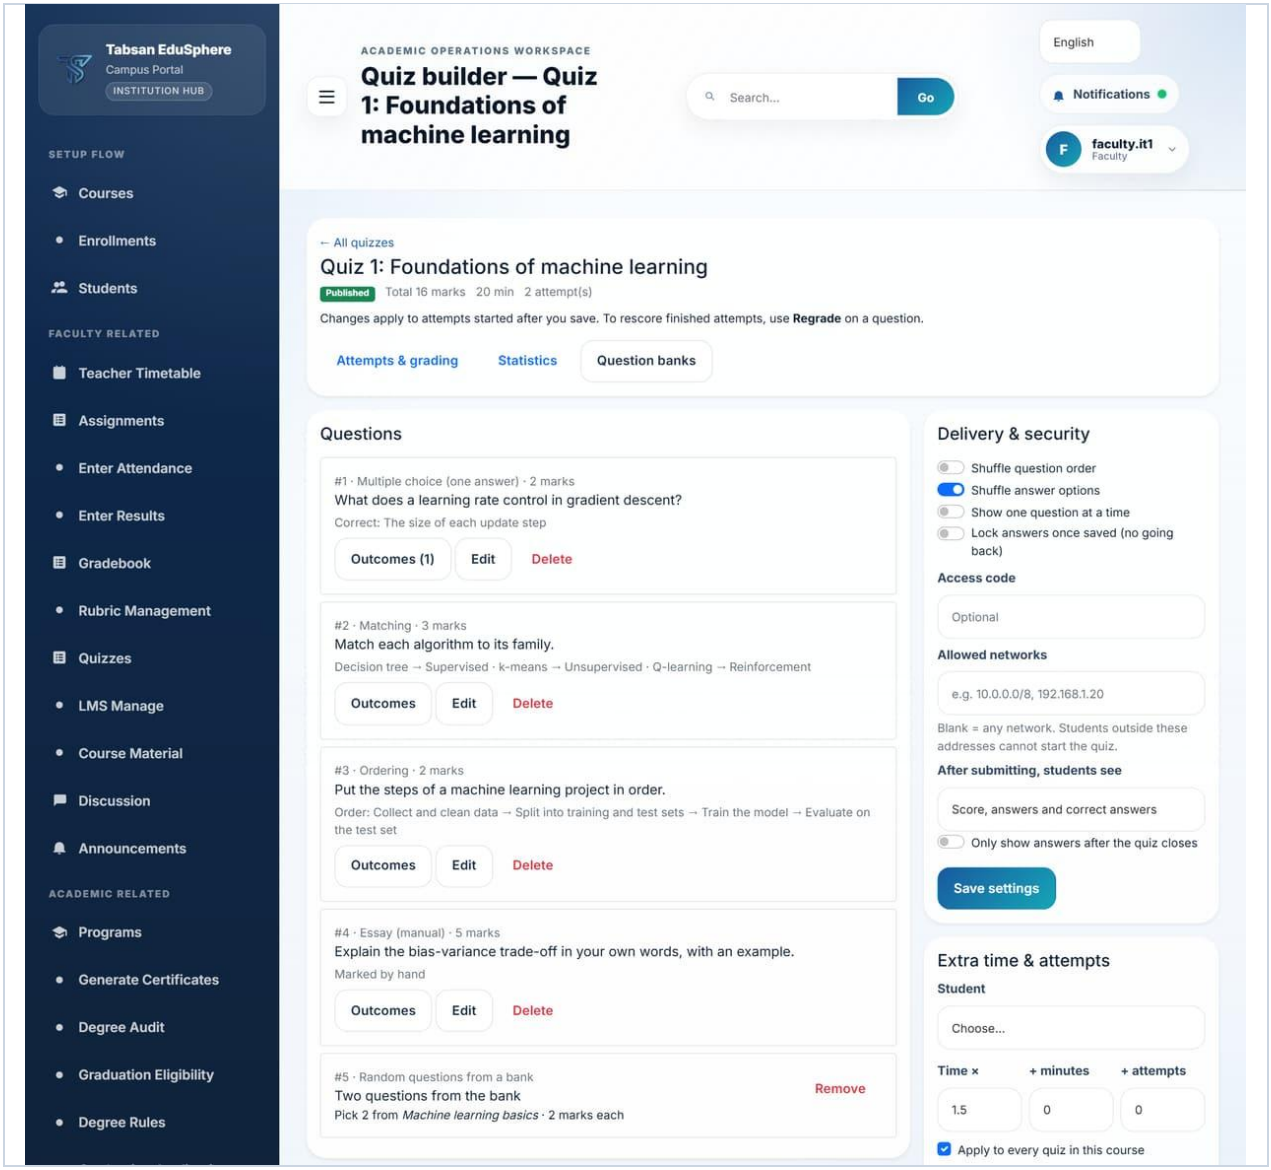

Figure 8.2 *The quiz builder: questions, a bank group, delivery and security settings, and accommodations*

Question types

Type	How it is answered and marked
Multiple choice (one answer)	Pick one option. Marked automatically.
Multiple answers	Tick every correct option; partial credit for each right choice, less for wrong ones.
True / False	Choose True or False. Marked automatically.
Matching	Match each prompt with an answer from a list, which can include extra wrong answers. Partial credit per pair.

© 2026 Tabsan Nexora. All rights reserved.

Type	How it is answered and marked
Ordering	Put items in the right order with the arrows. Partial credit for items in the right place.
Fill in the blanks	Type the missing words; [[name]] in the question marks each blank. Several accepted answers per blank.
Numeric answer	Type a number; exact with a tolerance, or within a range.
Formula (calculated)	Variables in [brackets] get new values for every student; the answer is calculated from a formula.
Short answer (manual)	A few words, marked by the teacher.
Essay (manual)	A longer written answer, marked by the teacher.
File upload (manual)	The student uploads a file, marked by the teacher.

> **TIP** Check each question's correct answer before publishing; the builder shows it under the question.

8.3 Question banks

Available to: SuperAdmin, Faculty

A question bank is a reusable pool of questions, tagged by topic and difficulty. A bank can belong to one course or be shared with other teachers. Quizzes draw random questions from it, so each student gets a different set and banks can be reused every term.

Procedure

1. From **Quizzes**, click **Question banks**.
2. Under **New bank**, enter the **Title**, choose the **Course** (or leave it not tied to a course), tick **Share with other teachers** if you want, and click **Create bank**.
3. Choose the bank and use **Add a question to this bank**. Questions use the same types as quizzes and can have tags and a difficulty.
4. Use **Export to Excel** to save a bank, and **Import questions from Excel** to add many questions at once. Rows that cannot be read are listed so you can fix them.

© 2026 Tabsan Nexora. All rights reserved.

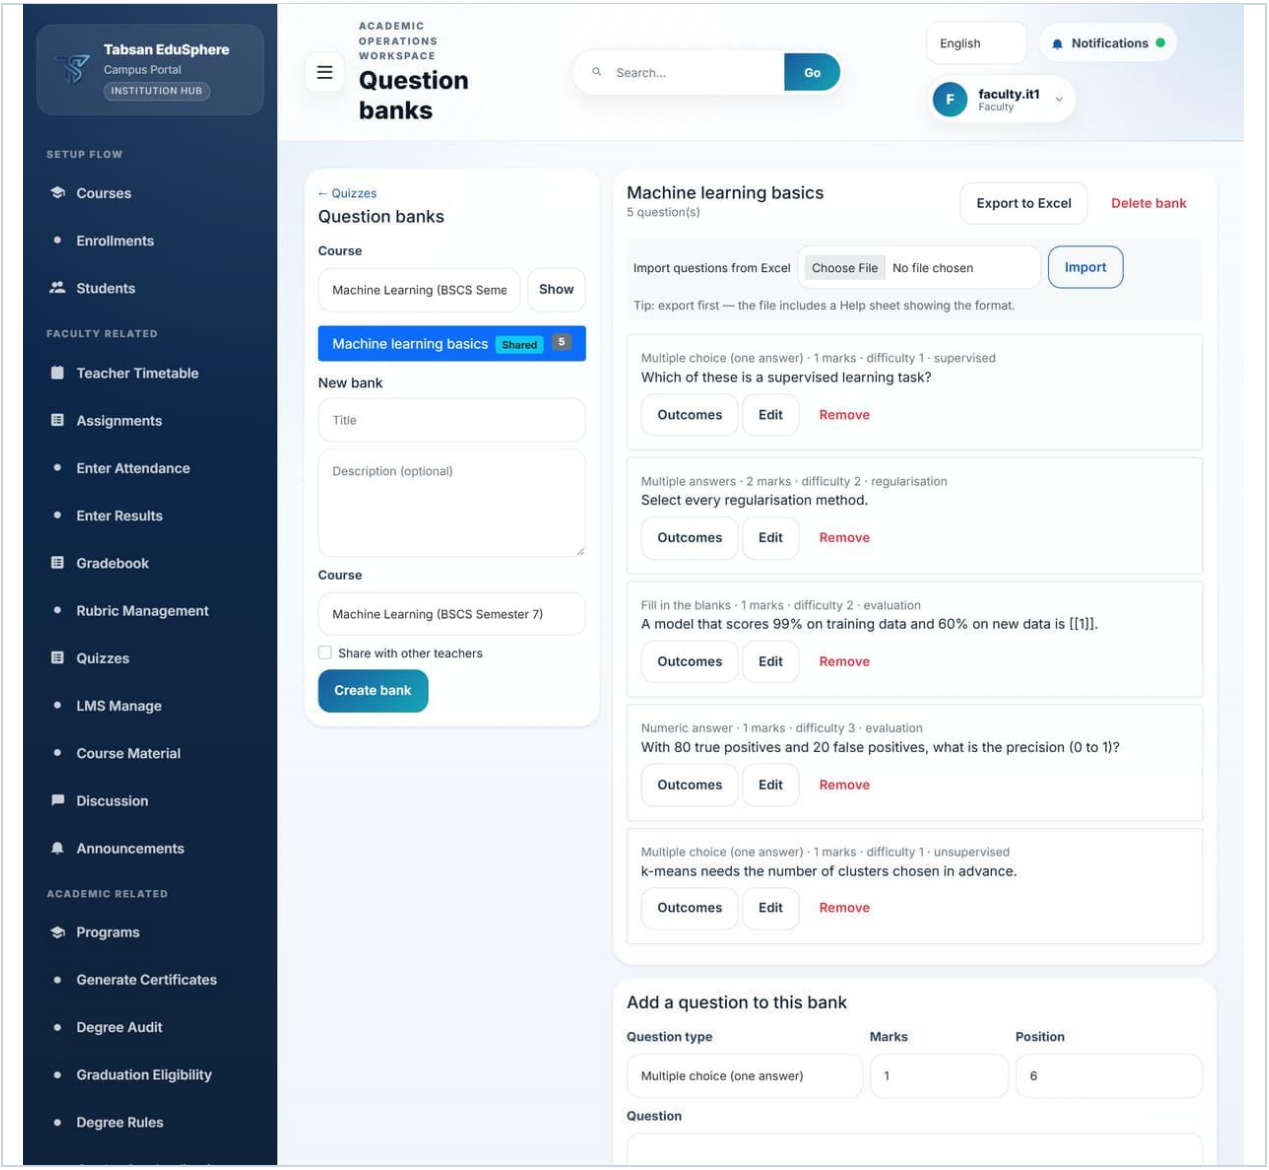

Figure 8.3 *A question bank with its questions*

Good to know

- Export first: the file includes a Help sheet showing the format.
- A bank used by a quiz cannot be deleted.

8.4 Taking a quiz (students)

Available to: Student

Students find their quizzes in **View Quizzes**. The start page shows the number of questions, the time limit, the attempts allowed and used, when the quiz opens and closes, and the teacher's instructions.

Procedure

1. Open **View Quizzes** and click the quiz.
2. Read the instructions. Enter the **Access code** if your teacher gave you one, and click **Start quiz**.
3. Answer the questions. Answers are saved as you go; drag items into order with the arrows, choose matches from the lists, type into the blanks inside a sentence, or upload a file where asked.

© 2026 Tabsan Nexora. All rights reserved.

4. Click **Submit** before the time runs out. When the timer reaches zero, your saved answers are submitted for you.
5. Open **Review** to see what your teacher allows: your score, your answers and the correct answers, and any feedback.

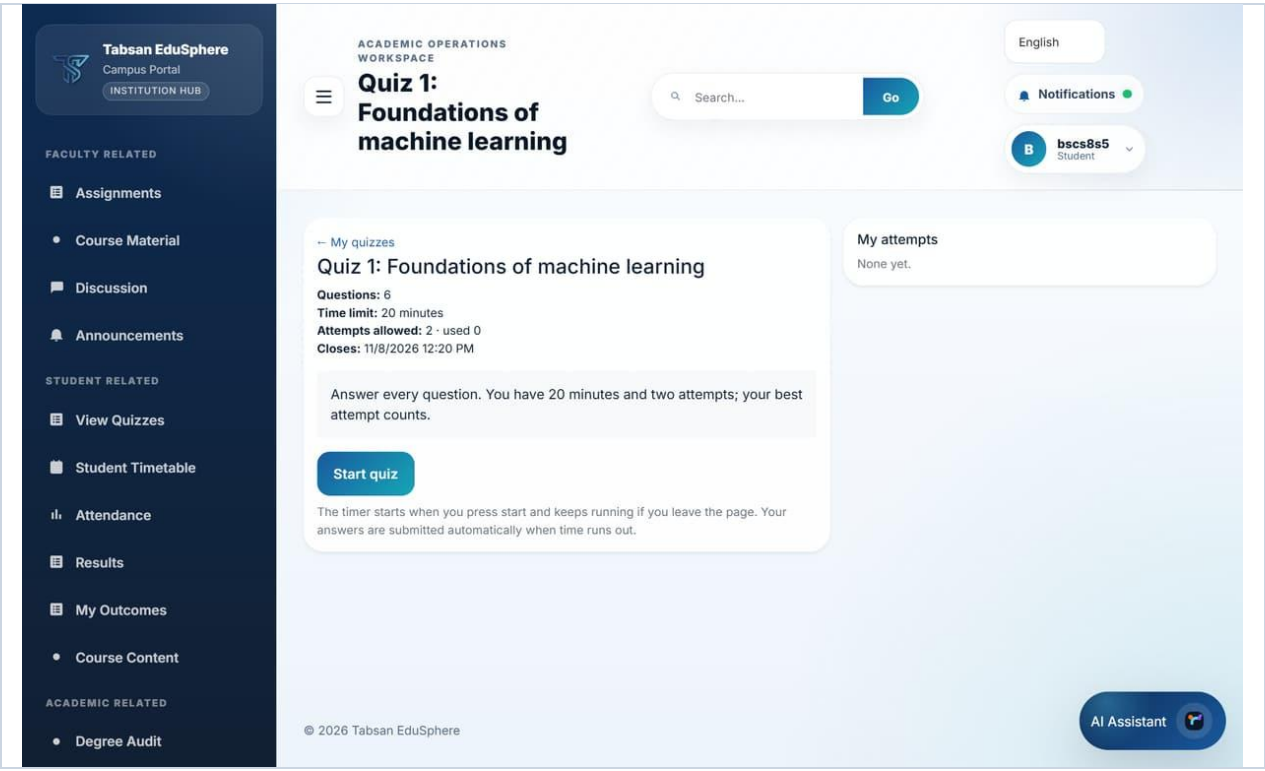

Figure 8.4 *Before starting a quiz*

© 2026 Tabsan Nexora. All rights reserved.

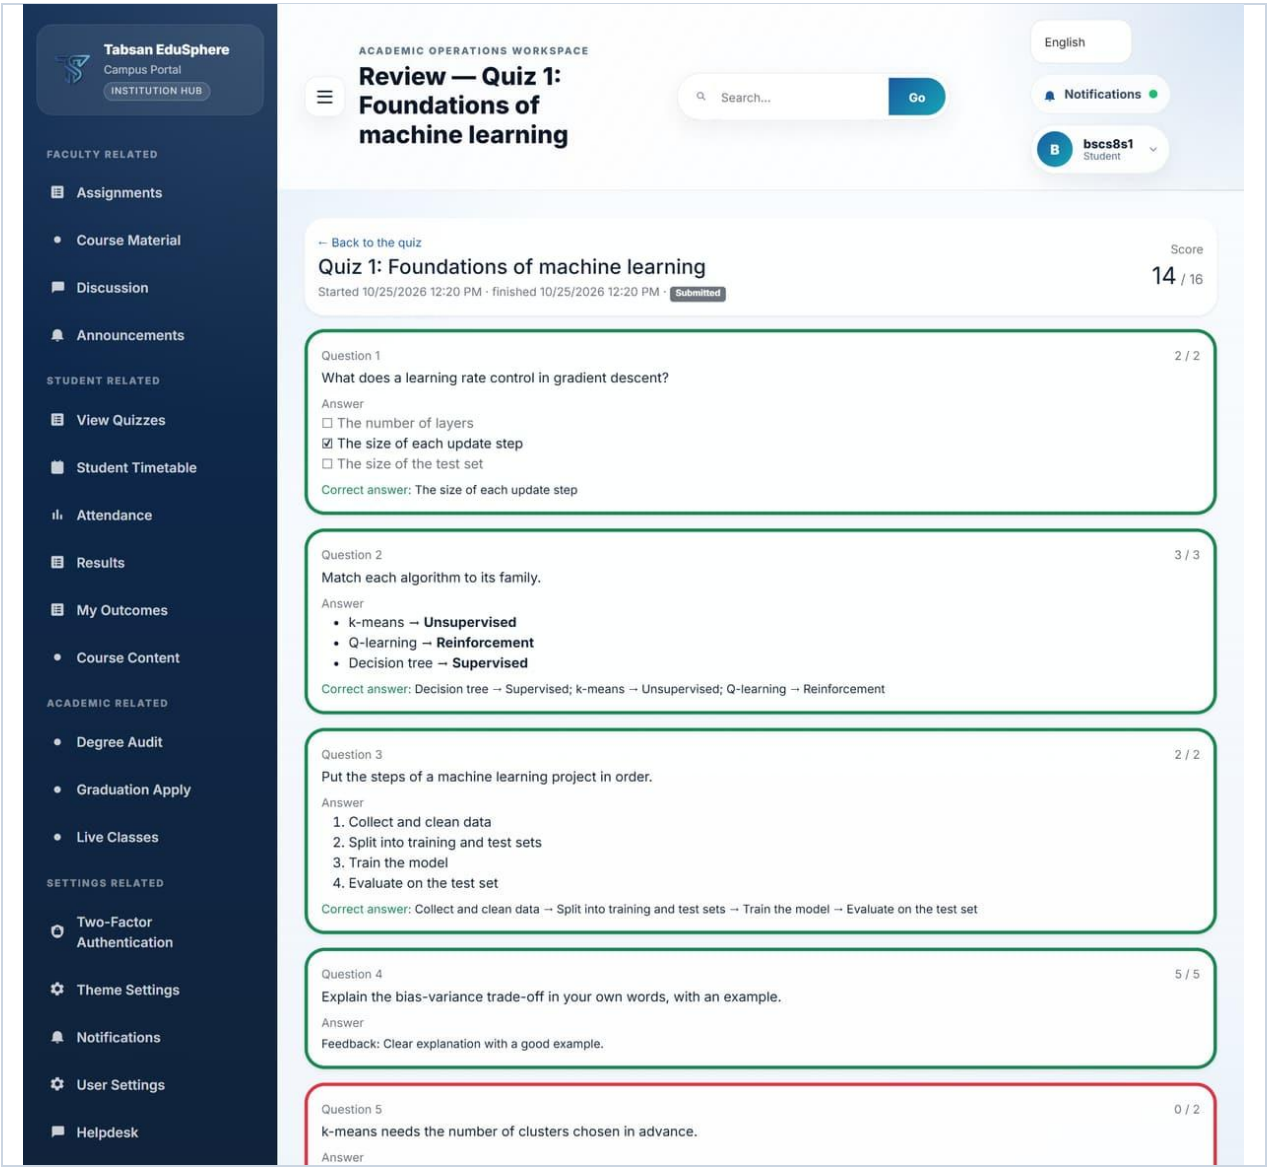

Figure 8.5 *Reviewing a submitted attempt*

Good to know

- The timer starts when you press Start and keeps running if you leave the page. If your connection drops, your last saved answers are kept; use **Resume attempt** to continue.
- If the quiz shows one question at a time with locked answers, you cannot go back after moving on.
- Answers that need a teacher (essays, short answers and files) show as pending until they are marked.

8.5 Marking quiz answers

Available to: SuperAdmin, Faculty

Objective questions are marked automatically when a student submits. Short answers, essays and uploaded files wait in the **Needs marking** queue on **Attempts & grading**, with the student, the question and the answer.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Open **Quizzes** and click **Attempts & grading** on the quiz.
2. For each answer in **Needs marking**, enter the marks (up to the question's marks) and optional **Feedback (optional)**, and click **Save marks**.
3. Under **All attempts**, click **Open** to see a whole attempt.

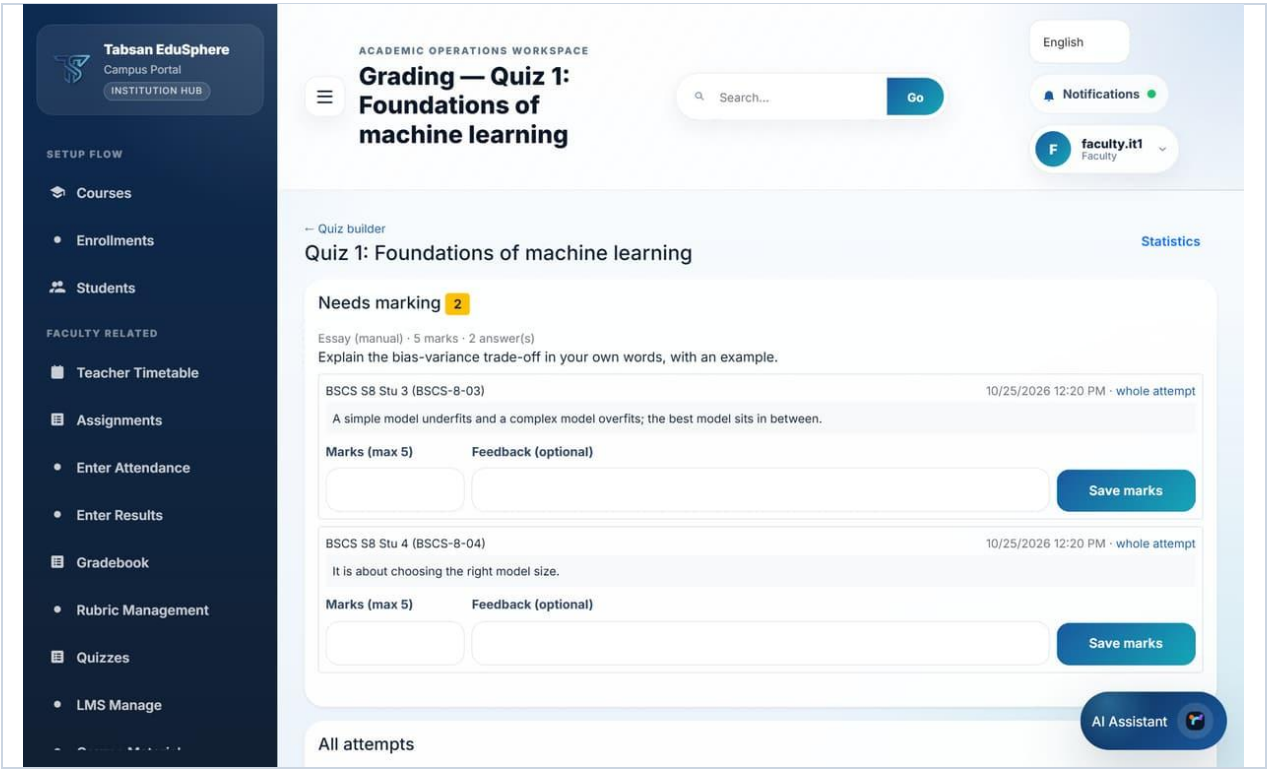

Figure 8.6 *Attempts & grading: answers that need marking*

What happens next

When the last answer of an attempt is marked, its total is calculated, the student can see it (as the review settings allow), and the gradebook is updated.

8.6 Quiz statistics and regrading

Available to: SuperAdmin, Faculty

Statistics summarises the finished attempts (count, average, highest and lowest score) and, for each question, the average marks, the **Difficulty** (the share of marks students earned; 1.00 means everyone was right) and the **Discrimination** (how well the question separates strong from weak students: above 0.3 is good, near 0 means the question does not separate them, and below 0 suggests a wrong key). Option counts show how often each answer was chosen.

Procedure

1. Open **Statistics** from the quiz.
2. If a question's answer key was wrong, click **Edit question**, correct it, then **Regrade** to recalculate every finished attempt, or **Full credit for all** to give everyone the marks.

© 2026 Tabsan Nexora. All rights reserved.

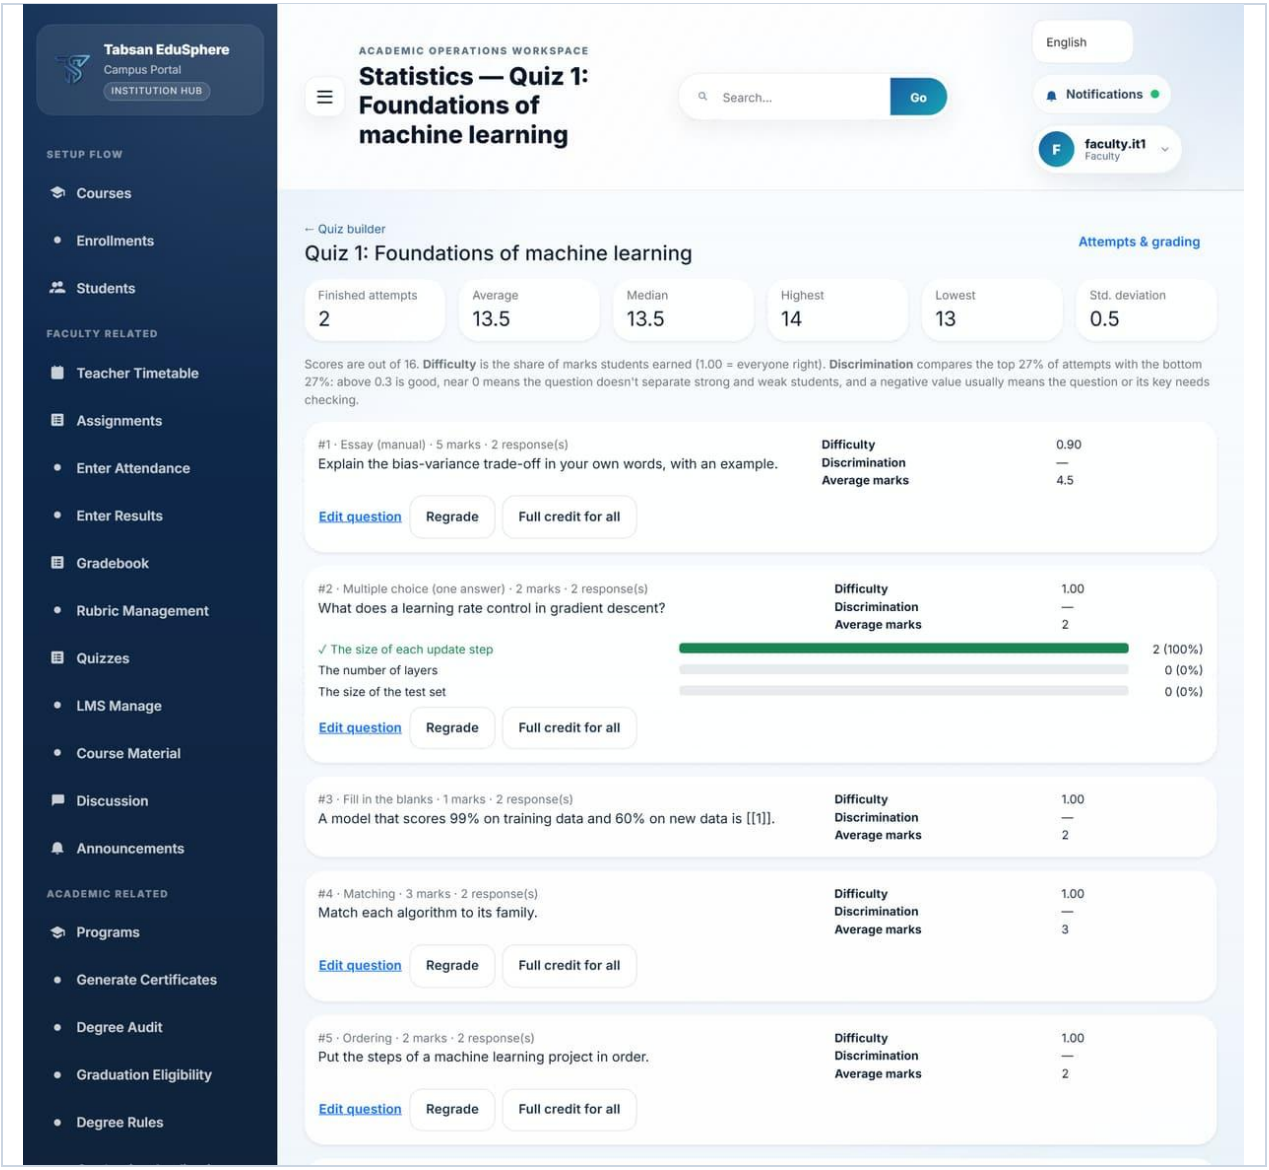

Figure 8.7 *Quiz statistics with difficulty and discrimination per question*

Good to know

- Manually marked questions can only be regraded with full credit.
- A question that has answers cannot be deleted, so the record of the attempts stays complete.

8.7 Late and missing work, and student groups

Available to: SuperAdmin, Admin, Faculty

Late policy & groups (from Assignments, after choosing a course) holds two course-wide settings: how late and missing work is graded, and the course's student groups.

Procedure

1. Open **Assignments**, choose the course and click **Late policy & groups**.
2. Under **Late & missing work**, tick **Deduct points for late work** and enter the **Deduction (%)** for every started hour or day late and the **Lowest grade (%)** it can fall to.

© 2026 Tabsan Nexora. All rights reserved.

3. Optionally tick **Grade work never handed in** and enter the **Missing grade (%)**. It is given automatically once each student's due date has passed; **Grade missing work now** applies it at once. Handing in late work later replaces it. Save.
4. Under **Group sets**, create a set (for example "Project teams"), then add groups by name with **Add group**, split the class at random by the number of groups or students per group, or let students sign up themselves with a **Largest group** size.
5. Add or remove members of each group as needed. A student belongs to at most one group in each set.

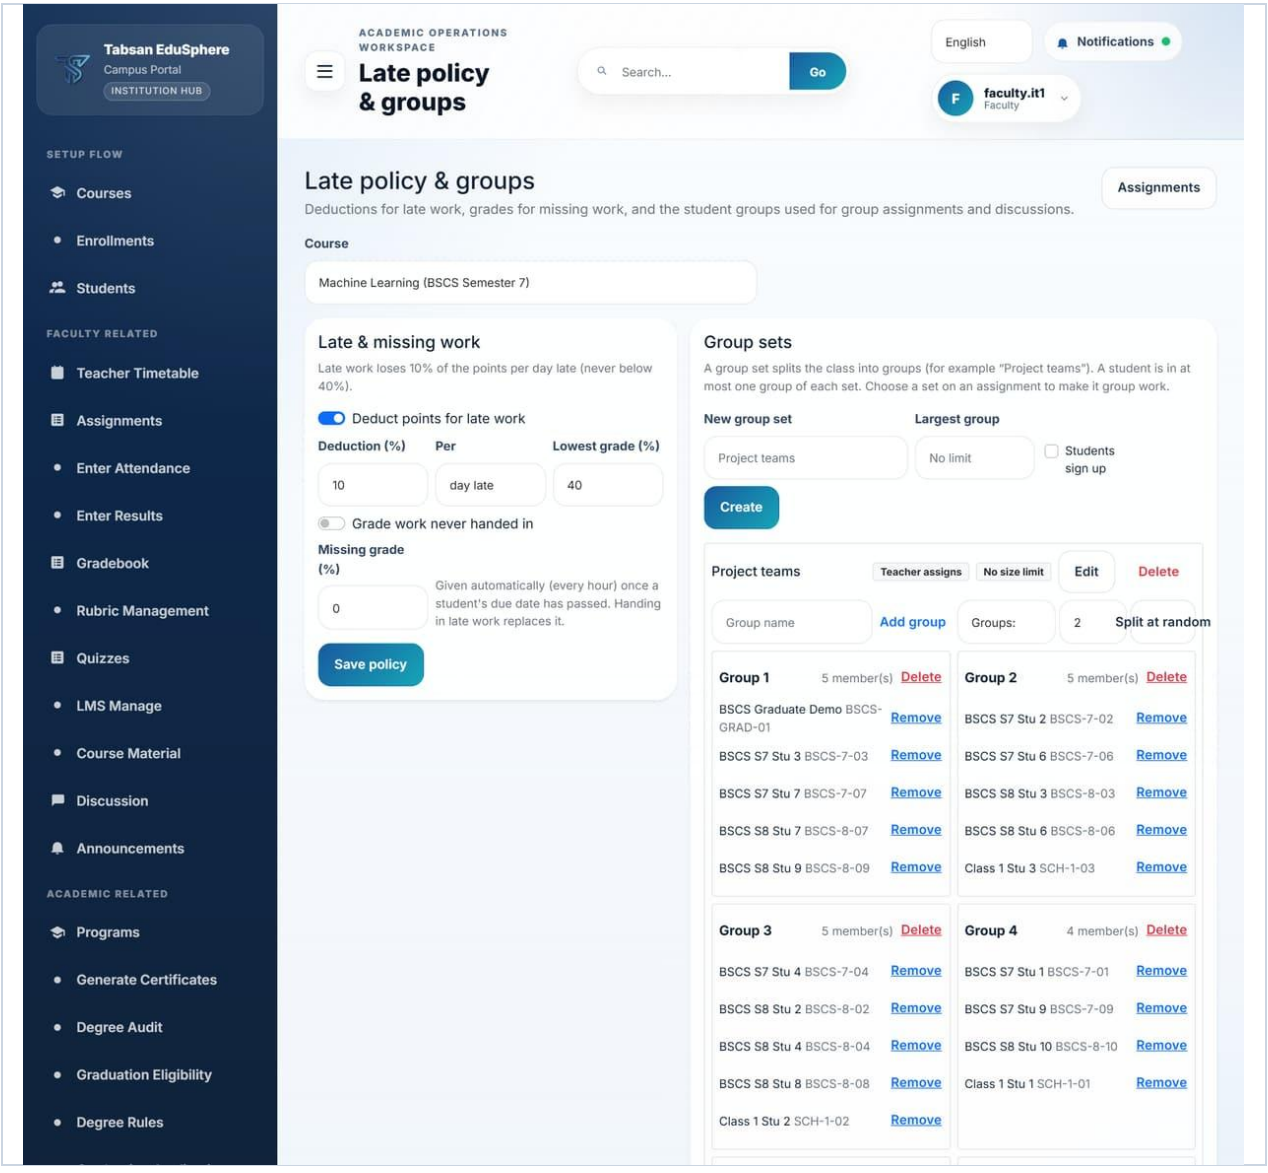

Figure 8.8 *Late policy & groups for a course*

Good to know

- Type the mark you would give; the deduction is applied on top and shown separately to the student.
- Groups also get private discussion threads (Discussion > Post to).

© 2026 Tabsan Nexora. All rights reserved.

8.8 Assignment options: dates, group work, peer review and similarity

Available to: SuperAdmin, Admin, Faculty

Click **Options** next to an assignment (or **Options & dates** in the grading workspace) to change how it is handed in and reviewed.

Procedure

1. Under **When students can hand in**, set **Opens (UTC, optional)** and **Late work accepted until (UTC)**. Work after the due date is late; after the cut-off it is refused. Leave the cut-off empty to close at the due date.
2. Under **Group work**, choose **Individual work** or a **Group set**. With a group set one member hands in for the whole group, and one grade goes to every member unless you tick **Grade each member separately**.
3. Under **Peer review**, set **Reviews per student** (0 turns it off, up to 5), **Reviews due (UTC)** and **Anonymous reviews**. Reviews are handed out automatically after the due date among students who handed in work, or click **Assign reviews now**.
4. Under **Similarity check**, tick **Check every handed-in attempt** and, if you wish, **Show students their own score**. Click **Save options**.
5. Under **Assign to — different dates**, choose a student (for example for an extension) or a group, enter their **Due (UTC)**, opening and late-work dates and a **Note**, and click **Add dates**. A student's own dates win over their group's.

© 2026 Tabsan Nexora. All rights reserved.

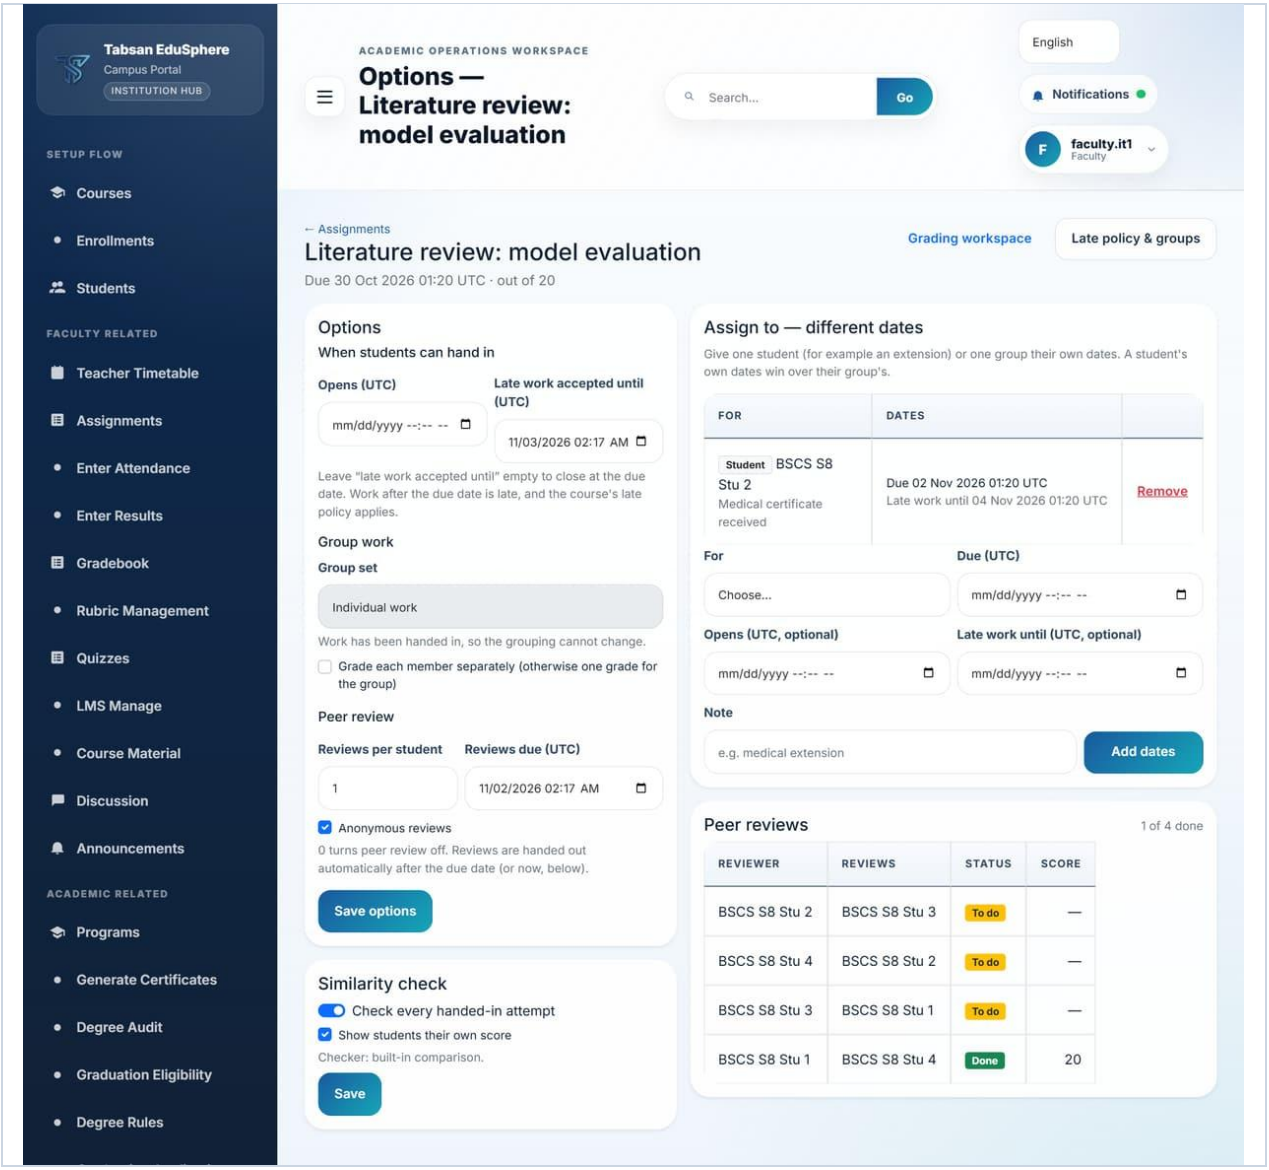

Figure 8.9 *Assignment options with peer reviews assigned and a personal due date*

> **NOTE** The grouping of an assignment cannot change once work has been handed in.

8.9 The grading workspace

Available to: SuperAdmin, Admin, Faculty

The grading workspace (**Grade** next to an assignment) shows everything needed to mark one submission after another without leaving the page: the list of submissions, the work itself, and the marks, rubric and comments.

Procedure

1. The left column lists the submissions. Filter it with **All**, **Needs grading**, **Late** or **Graded, not posted**. Each shows its attempt, late status, similarity score and grade.
2. The middle column shows the selected file. PDFs and images open in the viewer; Word, PowerPoint and Excel files appear as PDF once converted. Typed answers appear in full.

© 2026 Tabsan Nexora. All rights reserved.

3. Mark the work with the toolbar: highlight, strike-out, box, text, comment pin and freehand drawing. Type in an annotation's box to attach a comment.
4. On the right, enter the marks and feedback; they save automatically (Ctrl+Enter saves at once). With a rubric, choose a level per criterion and click **Save rubric**; the total can set the marks.
5. Add comments for the student, or tick **Graders only** for a private note. **Record** adds a voice comment.
6. Move to the next student with **Alt+→** (previous: **Alt+←**) or the arrow buttons. With manual posting, click **Post grades** when you are ready; **Hide grades** takes them back.

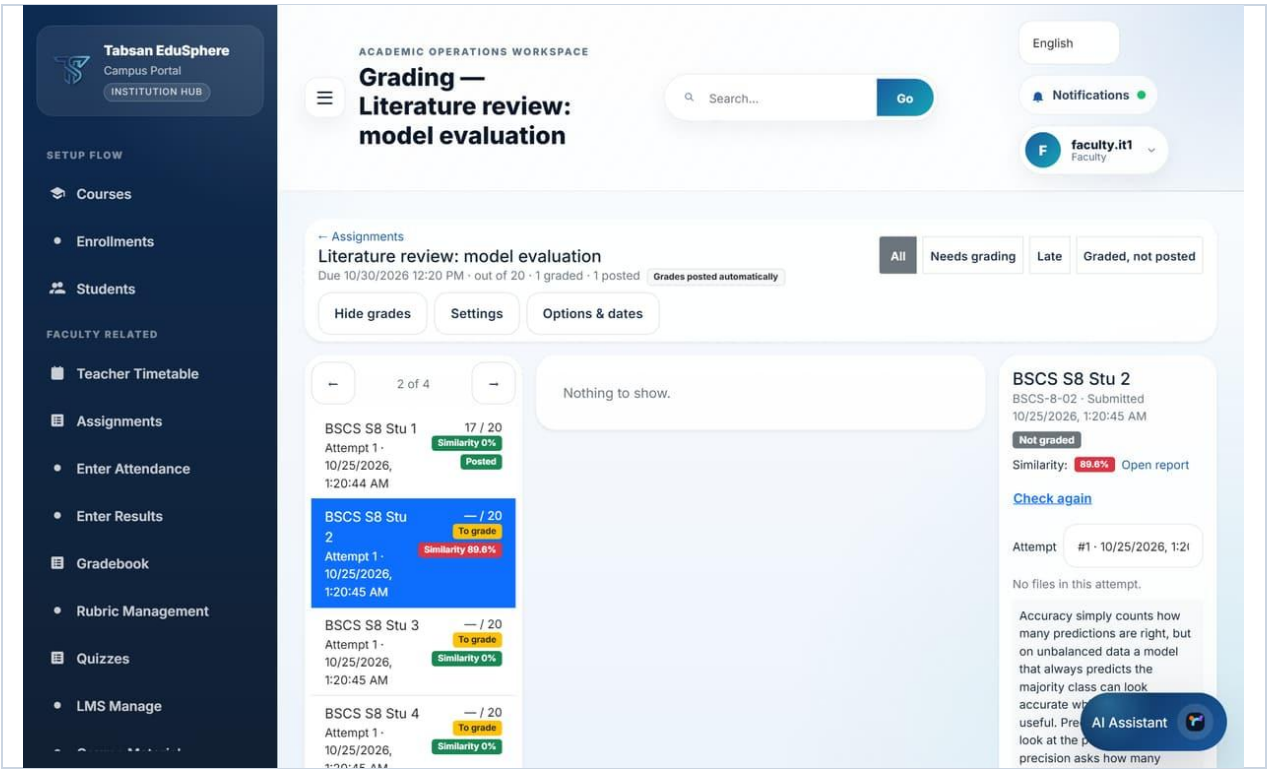

Figure 8.10 *The grading workspace*

Good to know

- A late submission shows the deduction and the final grade; tick **Waive the late deduction** to give the full mark.
- With peer review, each submission shows its peer average, and **Use peer average** copies it into the marks.
- **Anonymous grading** shows "Student 1, Student 2 …" until grades are posted; **moderated grading** lets a moderator choose the final grade from the graders' provisional marks.

8.10 Similarity checking

Available to: SuperAdmin, Admin, Faculty, Student

With **Check every handed-in attempt** on, every attempt is compared within about a minute: with the other work of the assignment, the course or the institution (built-in checker), or also with web pages and publications (Copyleaks, when your institution uses it).

© 2026 Tabsan Nexora. All rights reserved.

The grading workspace shows **Similarity NN%** for each submission: green below 25%, amber below 50%, red from 50%. **Open report** shows the matching passages side by side with the work they match; **Check again** re-runs the check, which helps for the first students to hand in, who had nothing to compare with yet.

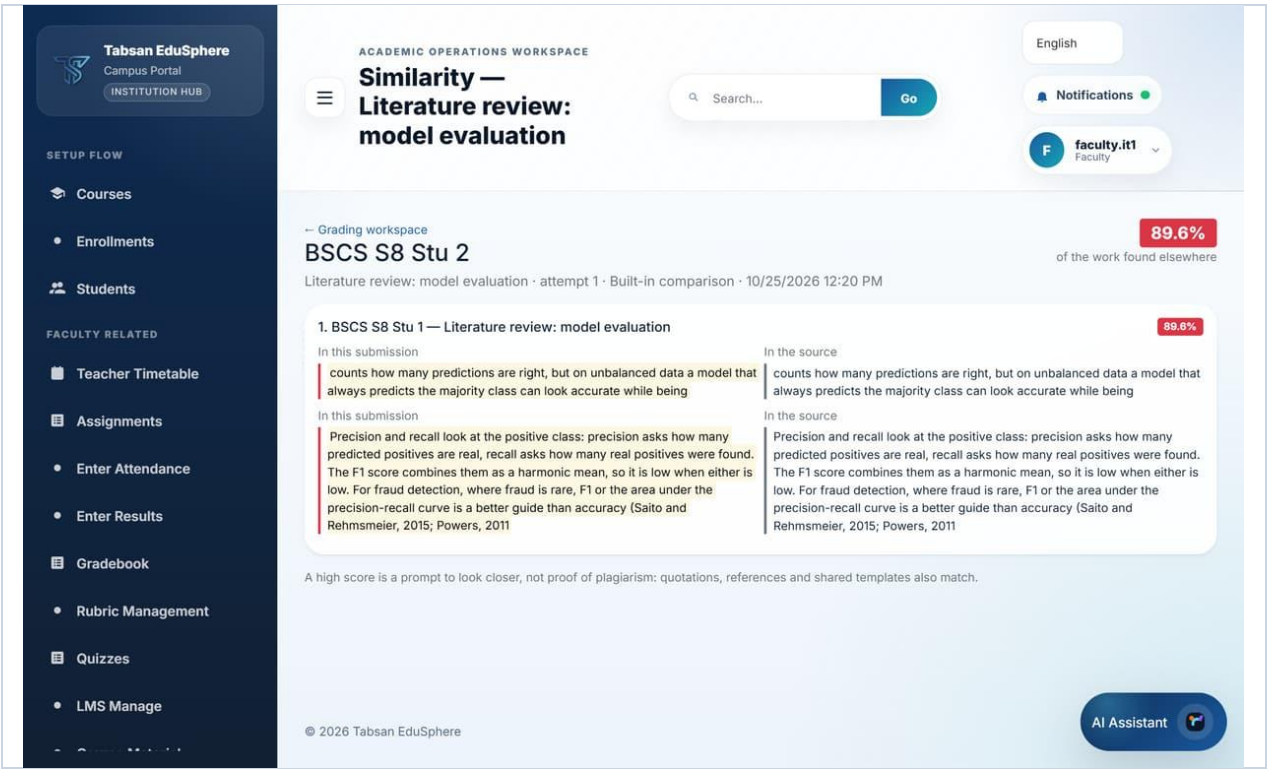

Figure 8.11 *A similarity report with matching passages*

Good to know

- Typed text and .txt, .docx, .pdf (with selectable text), .html and .rtf files are read; scanned images are not.
- A student's own earlier attempts and their group's work never count as matches.
- A high score is a prompt to look closer, not proof: quotations, references and templates match too.

8.11 Handing in work and peer review (students)

Available to: Student

A student's assignment page shows the due date (or **Your own dates** after an extension), when hand-in opens and until when late work is accepted, the course's late rule, previous attempts, grades, feedback and teacher comments, the similarity score (if the teacher shows it), and peer reviews to do and received.

Procedure

1. Open **Assignments**, choose the assignment, type your answer and/or attach files, and click **Submit**. If more attempts are allowed, you can hand in again; every attempt is kept.
2. For a group assignment, one member hands in for the group. You must be in a group to hand in; **My groups** shows your groups and lets you join or leave one when the teacher allows sign-up.

© 2026 Tabsan Nexora. All rights reserved.

3. When asked to review classmates' work, click **Review** under **Peer reviews**, read the work, choose the rubric levels or a score, write a helpful comment and click **Submit review**.
4. Reviews of your own work appear on the assignment page, anonymously unless your teacher turned that off.

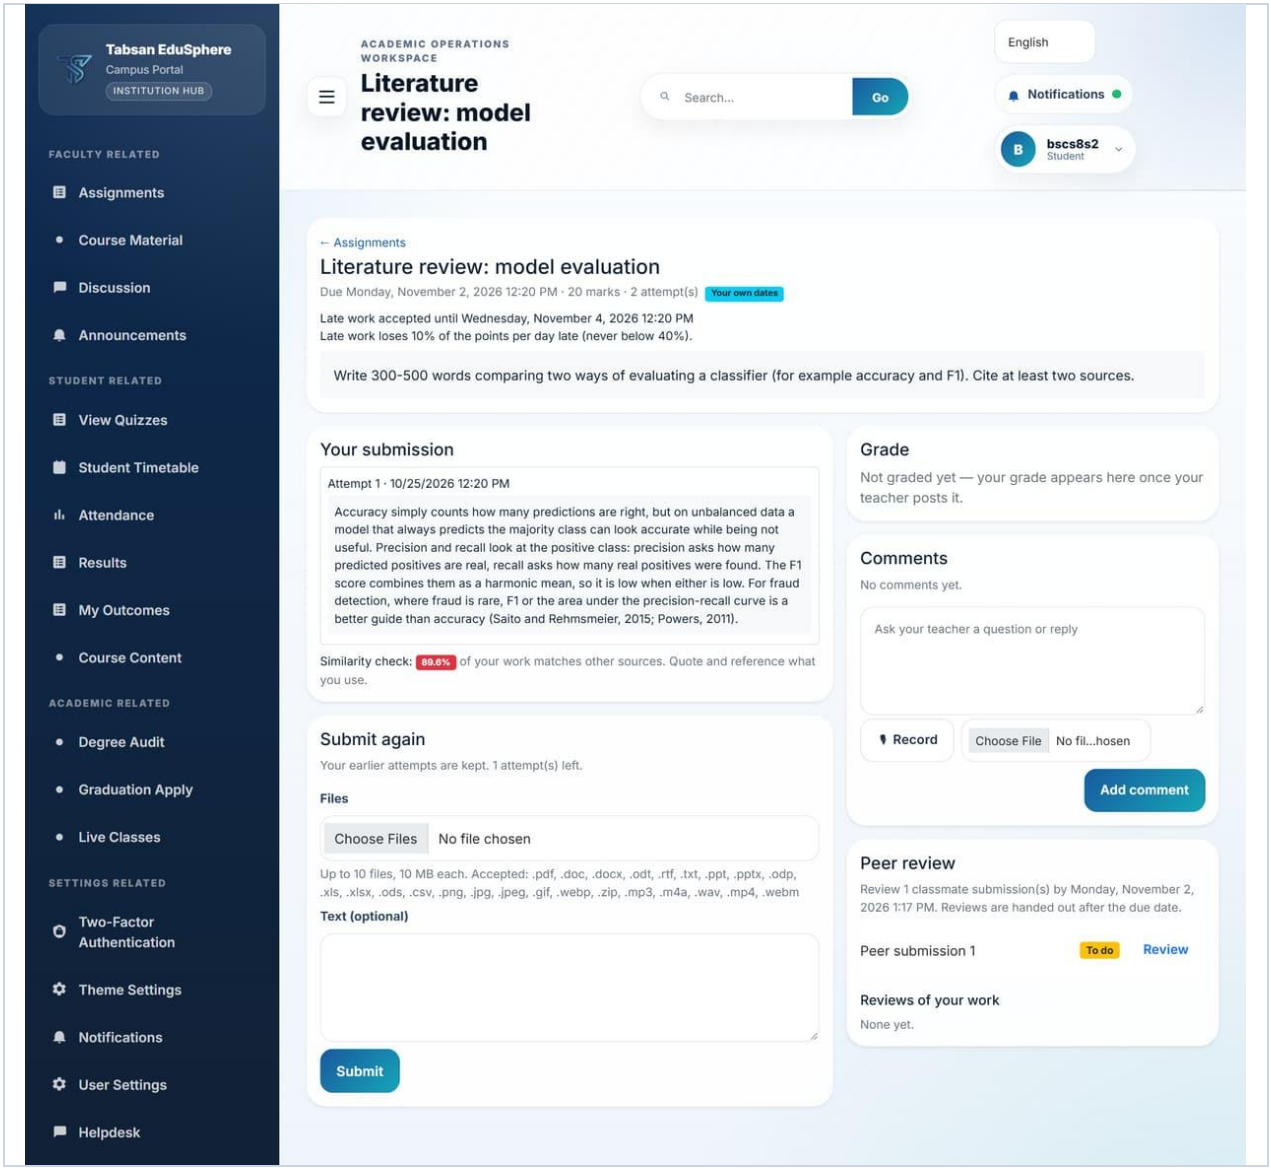

Figure 8.12 *A student's assignment page with a personal due date, the late rule, the similarity score and a review to do*

© 2026 Tabsan Nexora. All rights reserved.

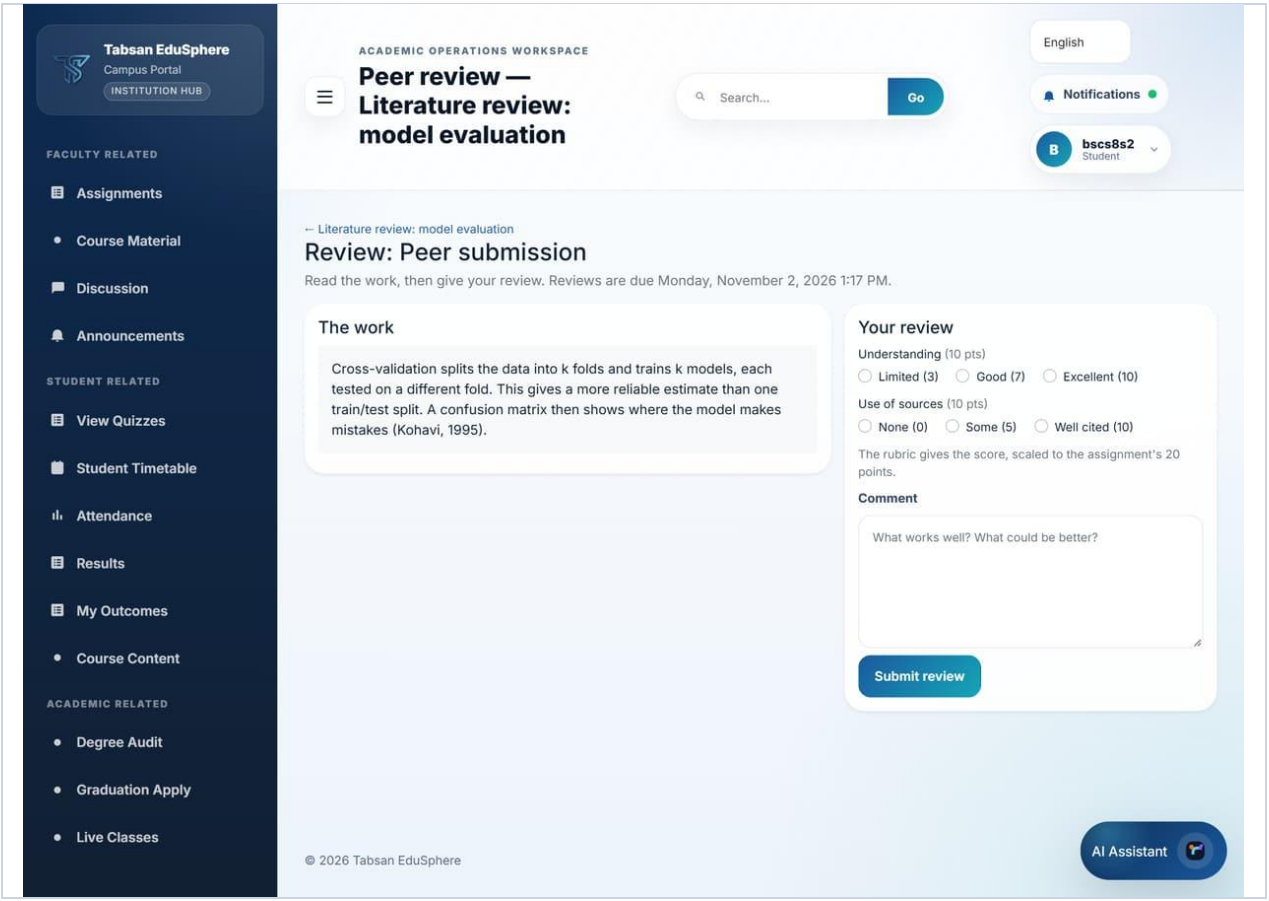

Figure 8.13 *Reviewing a classmate's work*

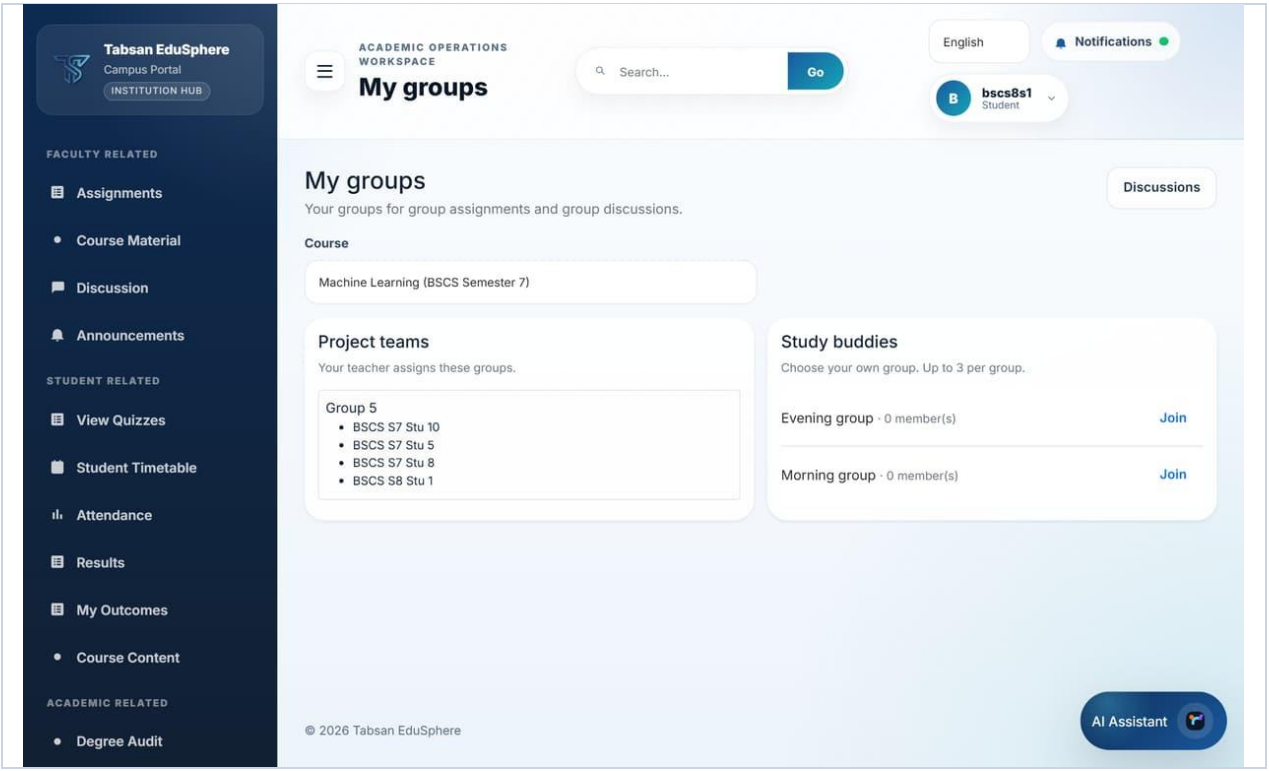

Figure 8.14 *My groups*

Good to know

- Late work may lose points: your grade shows the mark and the deduction.

© 2026 Tabsan Nexora. All rights reserved.

- You never see other students' work in a similarity report; ask your teacher if your score seems wrong.

© 2026 Tabsan Nexora. All rights reserved.

9 Learning Outcomes

Learning outcomes describe what students should be able to do by the end of a program or course. EduSphere links graded work to outcomes, so each student's mastery of each outcome is calculated from evidence, and program attainment can be reported for accreditation (for example PEC, HEC, NCAAA or ABET-style reviews).

9.1 Defining outcomes

Available to: SuperAdmin, Admin, Faculty

There are three levels: institution outcomes, **program learning outcomes (PLOs)** for each academic program (set by Admins), and **course learning outcomes (CLOs)** for each course (set by teachers). Each CLO can contribute to one or more PLOs.

Each outcome has a rating scale (by default 0 to 4), the mastery points needed, and a calculation method: decaying average, highest, most recent, average, or "mastered n times".

Procedure

1. Open **Learning Outcomes**.
2. To add an outcome, choose the **Level** (Program or Course), the program or course, a **Code** (for example PLO-3 or CLO1) and a **Title**. Keep the default scale or set your own levels, the mastery points and the calculation method.
3. For a course outcome, tick the program outcomes it contributes to.
4. Use **Edit** to change an outcome and **Turn off** to hide it from lists and reports (its evidence is kept). Tick **Show turned off** to see hidden outcomes.
5. To add many outcomes at once, download the import template, fill it in and import it.

© 2026 Tabsan Nexora. All rights reserved.

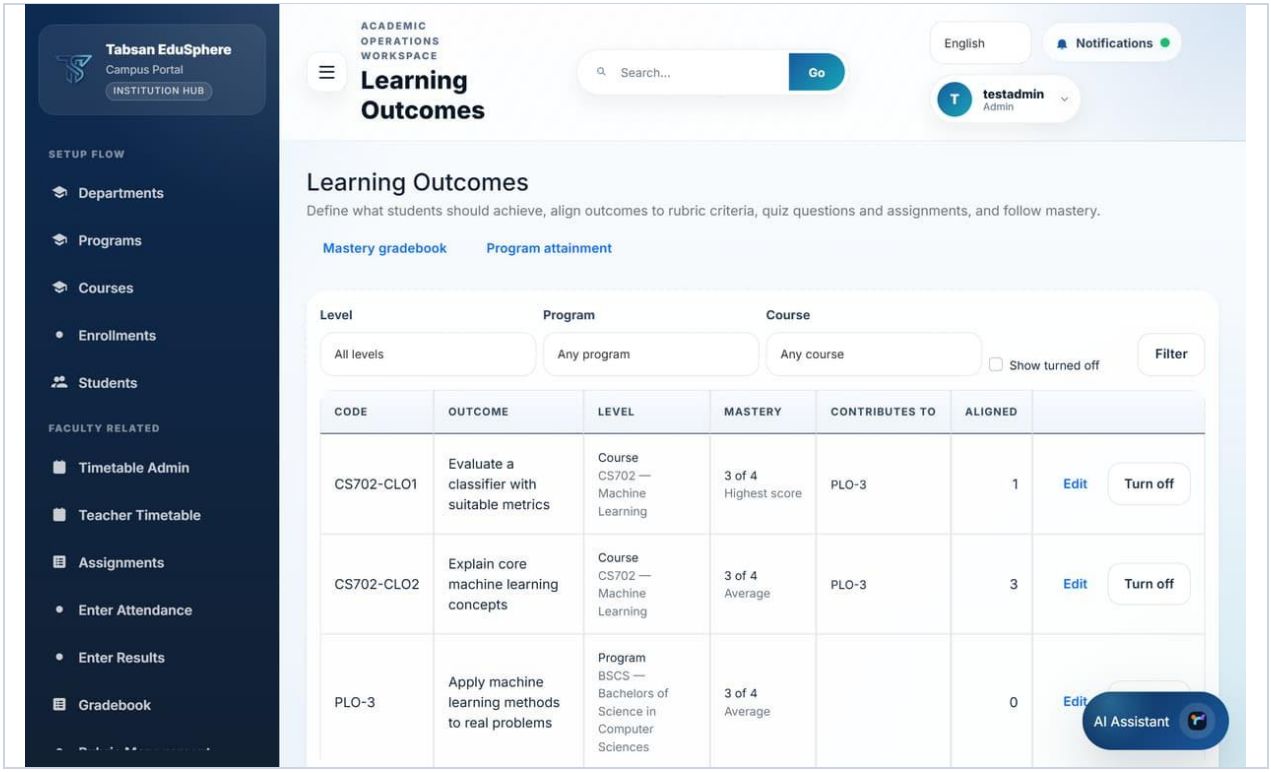

Figure 9.1 *Learning Outcomes: program and course outcomes with their mappings*

9.2 Aligning work with outcomes

Available to: SuperAdmin, Admin, Faculty

An outcome only gathers evidence from work aligned with it. Click **Outcomes** on a rubric criterion (Rubric Management), a quiz question (quiz builder), a bank question (Question Banks) or an assignment, and tick what it assesses. Work already graded is counted straight away.

Good to know

- Only grades students can see count: unposted grades and unmarked essay answers are left out until you post or mark them.
- After bulk changes, click **Recalculate** on the course's mastery gradebook.

9.3 Mastery gradebook

Available to: SuperAdmin, Admin, Faculty

Learning Outcomes > **Mastery gradebook** shows, for one course, each student against each outcome: green (mastered), amber (near) or red (below), with how many students were assessed and how many mastered each outcome. Export it to Excel for your records.

© 2026 Tabsan Nexora. All rights reserved.

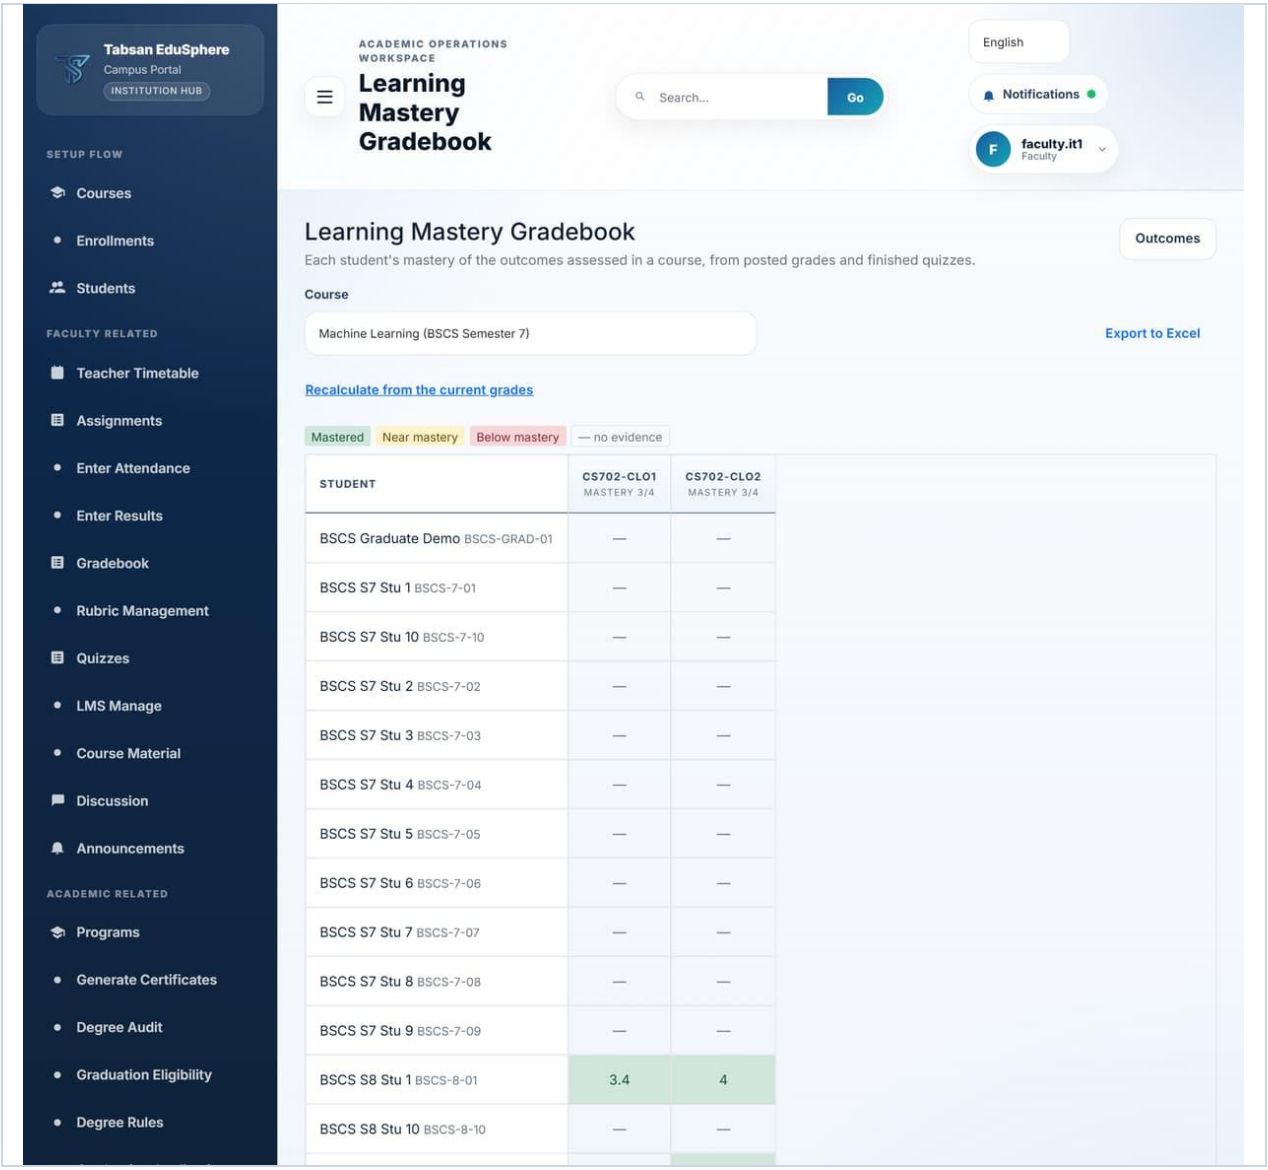

Figure 9.2 *Mastery gradebook for a course*

9.4 Program attainment

Available to: SuperAdmin, Admin

Program attainment reports, for each program outcome, how many students were assessed and how many attained it, the attainment percentage against your **Target (% of students)**, the average score and the courses the evidence came from.

Procedure

1. Open **Learning Outcomes** > **Program attainment**.
2. Choose the **Program**, enter the target and click **Show report**.
3. Use **Download PDF** or **Download Excel** for accreditation files.

© 2026 Tabsan Nexora. All rights reserved.

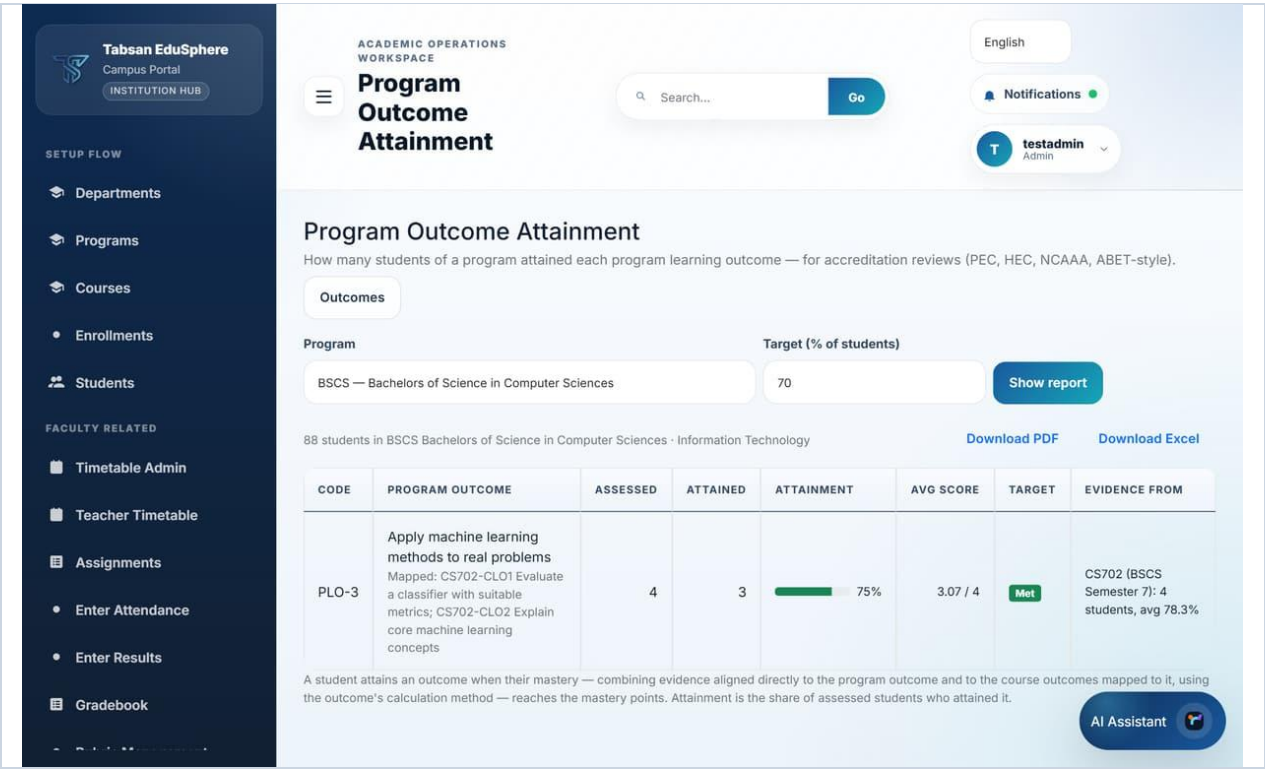

Figure 9.3 *Program outcome attainment*

9.5 My Outcomes (students)

Available to: Student

My Outcomes shows, for each course that uses learning outcomes, how well your graded work shows you have mastered each outcome: Mastered, Nearly there, Not yet or No evidence yet. Open **Evidence** to see which assignments and quizzes it comes from. Only grades your teacher has released count.

© 2026 Tabsan Nexora. All rights reserved.

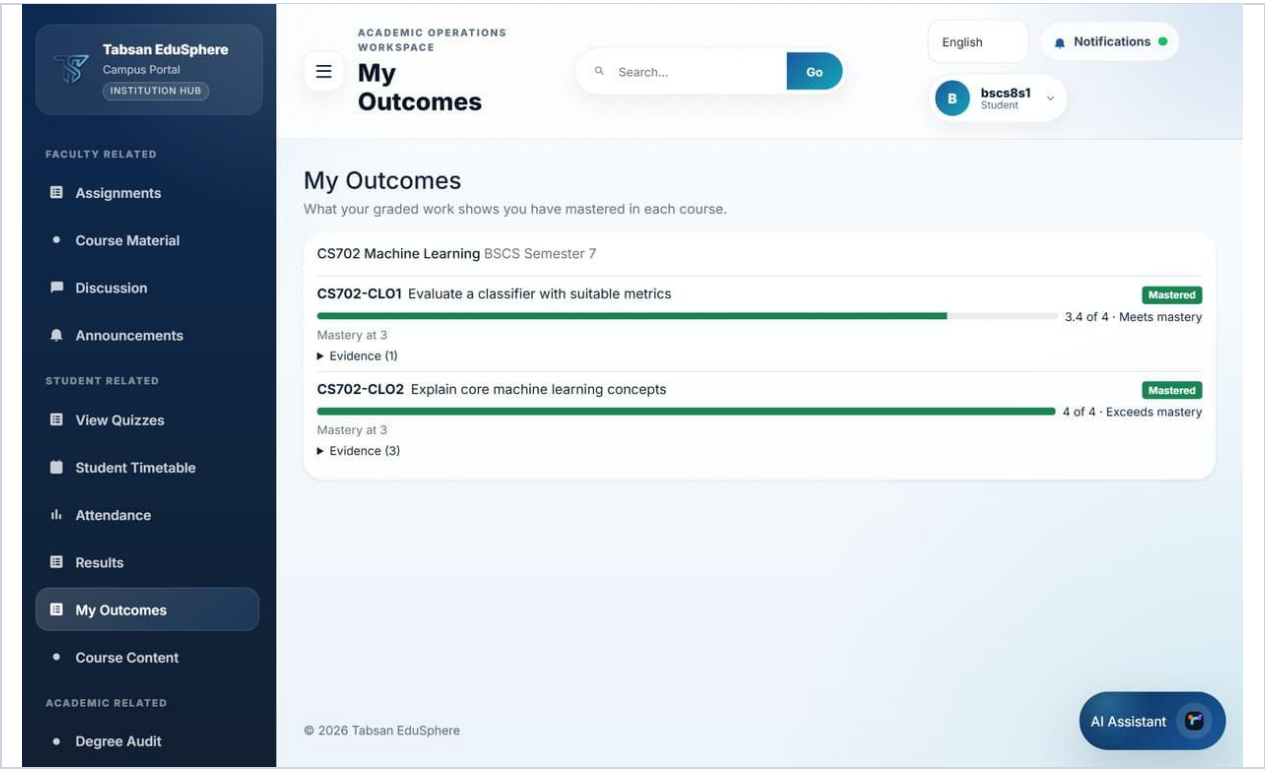

Figure 9.4 *My Outcomes*

© 2026 Tabsan Nexora. All rights reserved.

10 Results, Progression and Final Year Projects

This chapter covers how marks become grades, how students move from one level to the next, and how final year projects are run.

10.1 Results

Available to: SuperAdmin, Admin, Faculty, Student

The Results page shows published marks. Staff use the same filters as Enter Results to review a class. Students see only their own results, grouped by class or semester, with the mark, grade and publish date for each course.

Procedure

1. Open **Results**. Students can choose a **Class** to narrow the list.
2. Click **Export CSV** or **Export PDF** to download a copy of the results shown.
3. Students: if you believe a mark is wrong, click **Request Re-check** on that result, give a **Reason** and submit.

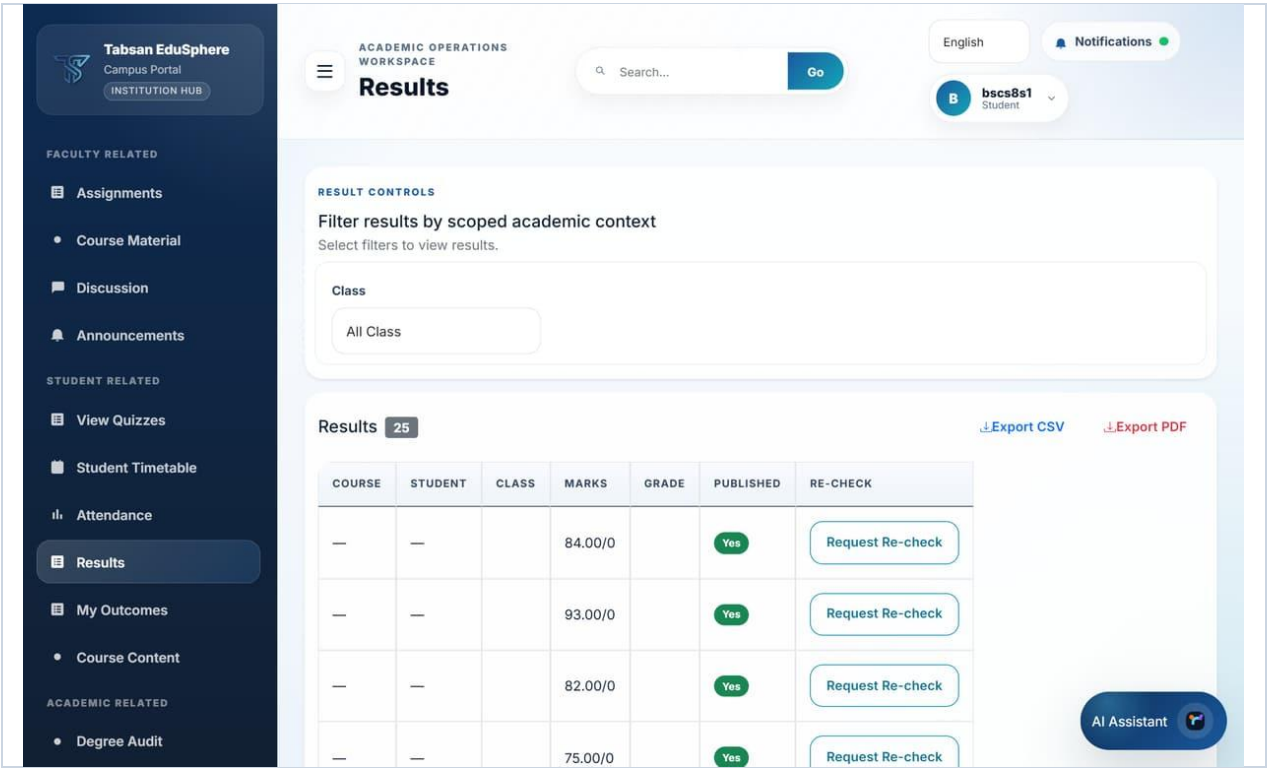

Figure 10.1 *Results (Student view)*

What happens next

The request is recorded as a change request for the administrators to review. If the mark is changed, the corrected result replaces the old one and the change is recorded in the audit log.

© 2026 Tabsan Nexora. All rights reserved.

Good to know

- Results only appear after the teacher publishes them. An empty page usually means marks have not been published yet.

10.2 Result Calculation

Available to: SuperAdmin, Admin

Result Calculation tells the portal how to turn marks into grades and grade points. It has two sections: the score-to-GPA scale, and the weighting of each assessment within a subject.

Procedure

1. In **Section 1: GPA and Score**, choose the **Institute** and add a row for each score band and its GPA value with **Add Row** (for example 85 and above = 4.0).
2. In **Section 2: Subject Score Calculation**, choose the **Course Type** or a specific **Course**, and set the **Weightage** of each **Component**, for example Midterm 30%, Final 50%, Assignments 20%.
3. Tick **Active** for the rows that should apply and click **Save**. Use **X** to remove a row.

© 2026 Tabsan Nexora. All rights reserved.

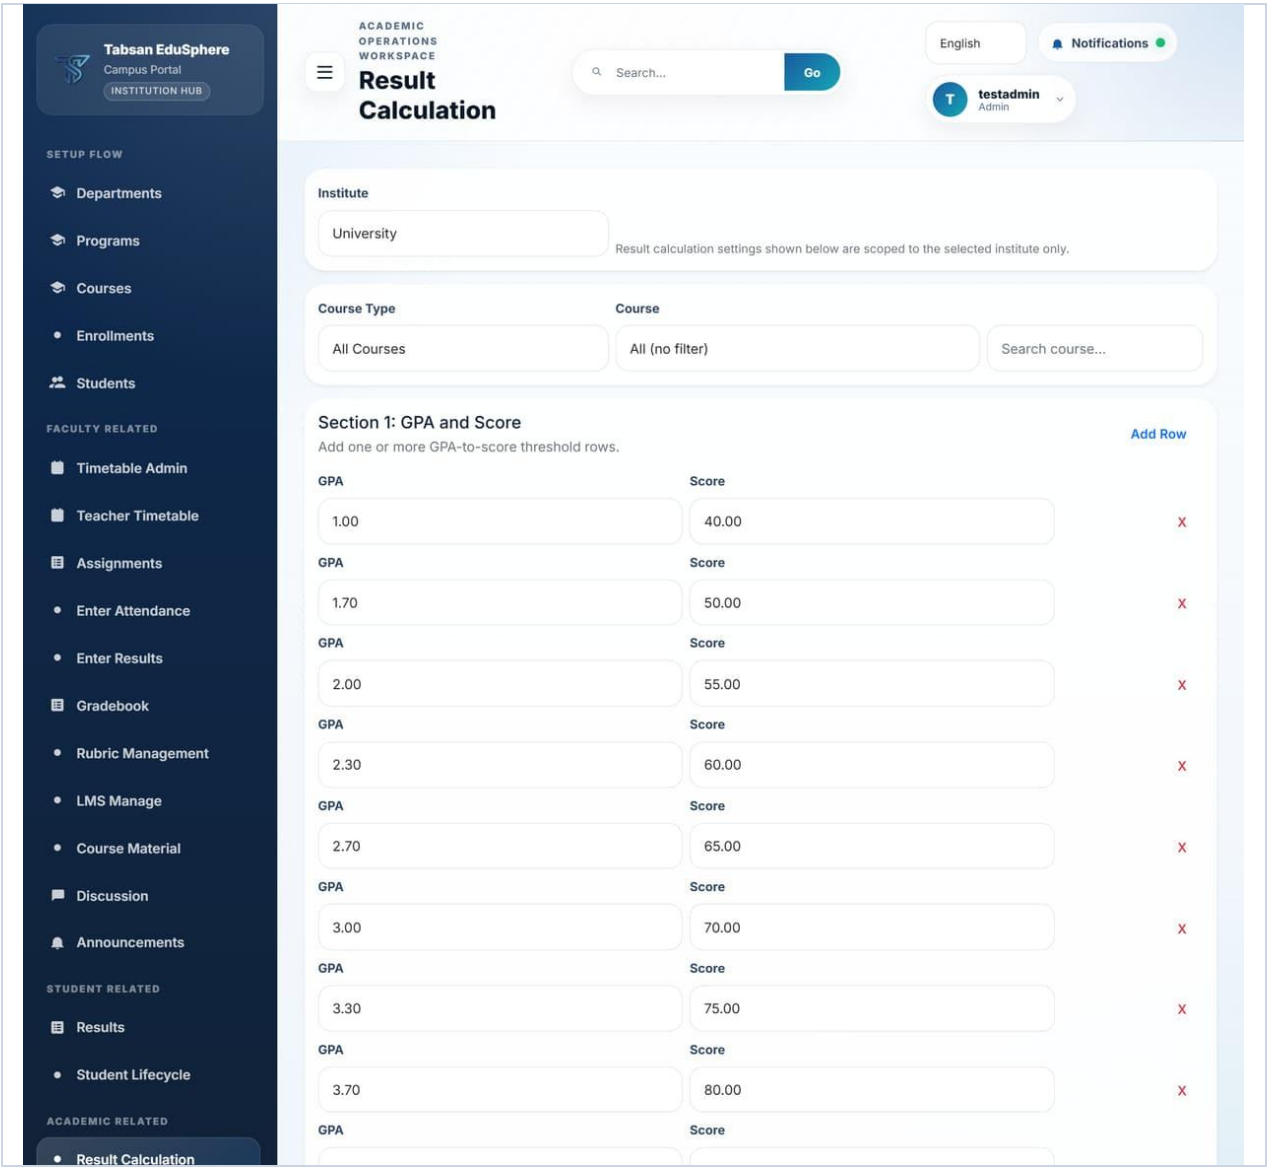

Figure 10.2 *Result Calculation*

Good to know

- Component weightings for a subject should add up to 100%.
- Change the rules before results are published for a term; changing them afterwards recalculates grades the next time results are processed.

> **NOTE** University results use GPA scales. School and College results are percentage based and do not need GPA rows.

10.3 Grading Config

Available to: SuperAdmin (edit), Admin and Faculty (view)

Grading Config sets the pass threshold, and optionally the grade bands, separately for School, College and University. The pass threshold decides whether a student is eligible for promotion to the next level.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Choose the scope (institute, department, semester, course or subject) the setting applies to.
2. Enter the **Pass Threshold** and, optionally, the **Grade Ranges JSON** that maps score ranges to letter grades.
3. Tick **Active** and click the matching button: **Save School Grading**, **Save College Grading** or **Save University Grading**.

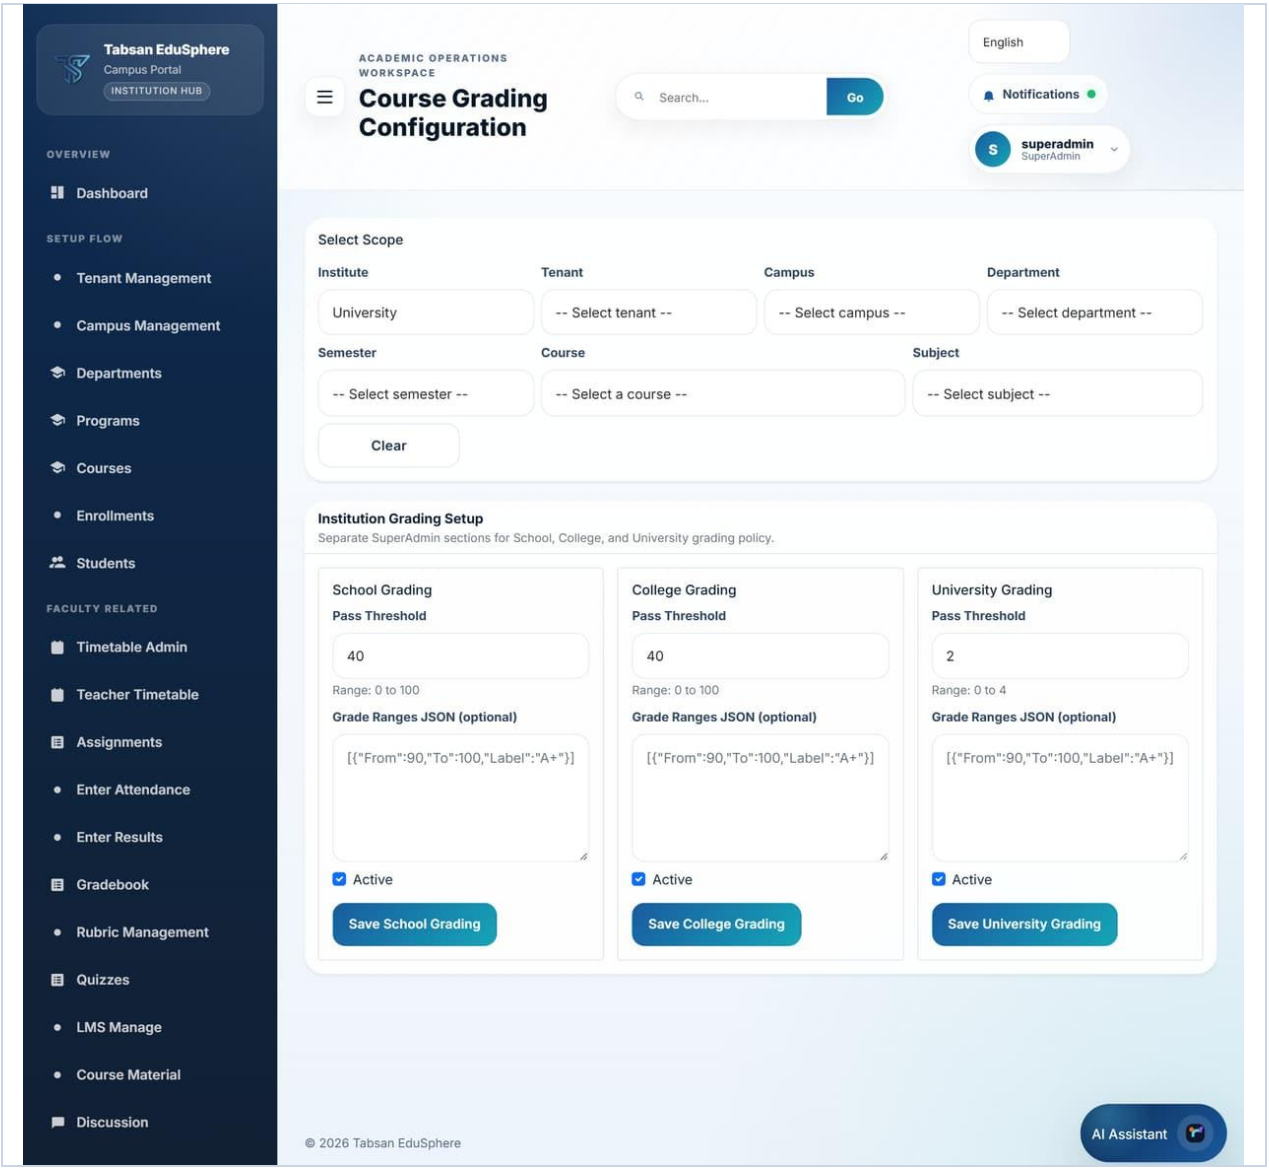

Figure 10.3 *Grading Config (SuperAdmin)*

10.4 Prerequisites

Available to: SuperAdmin, Admin

A prerequisite is a course a student must pass before they can enrol in another, for example CS101 before CS201. The page lists every course with the number of prerequisites it has.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Find the course in the list.
2. Click **Add Prerequisite** and choose the course that must be passed first.
3. To remove a requirement, click **Remove** next to it.

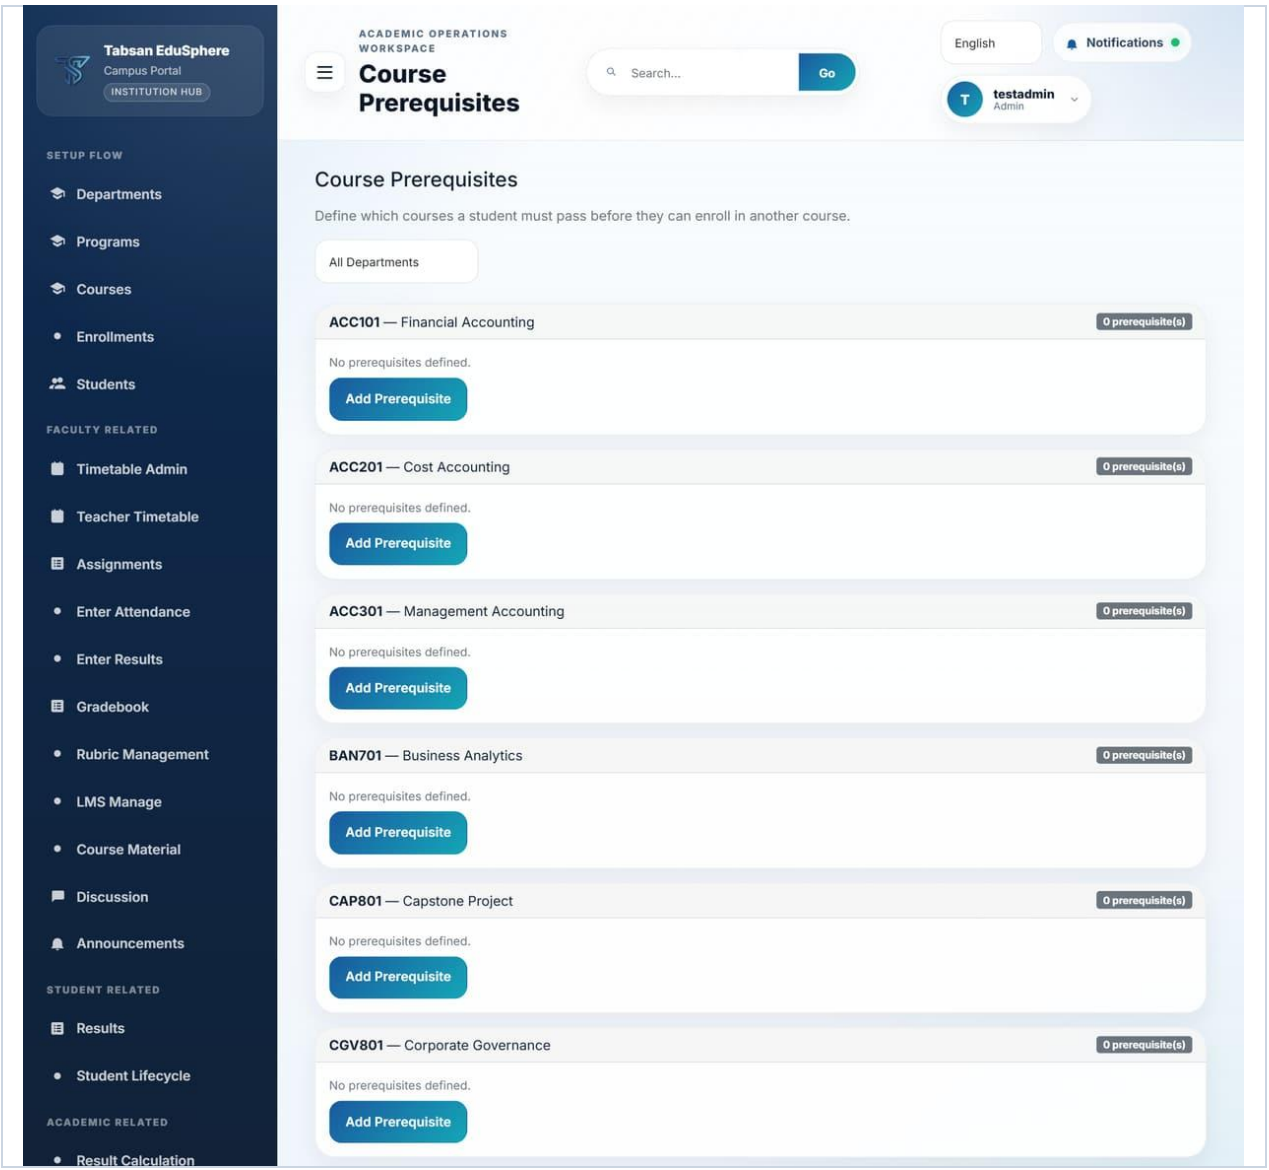

Figure 10.4 *Course Prerequisites*

What happens next

When a student, or an Admin on their behalf, tries to enrol in the course, the portal checks the student's published results and blocks the enrolment if a prerequisite has not been passed.

10.5 Student Lifecycle

Available to: SuperAdmin, Admin

Student Lifecycle moves students forward at the end of each term. **Promote** moves an eligible student to the next semester or class; **Graduate** completes the program for a student in the final level.

© 2026 Tabsan Nexora. All rights reserved.

A student is eligible for promotion when their result for the level meets the pass threshold set in Grading Config.

Before you start

- Results for the level are published, so eligibility can be calculated.

Procedure

1. Open **Student Lifecycle** and choose the **Department**.
2. Choose the **Semester** (or **Class**). The students at that level are listed with their standing.
3. Click **Promote** for each eligible student, or **Graduate** for a student in the final level.

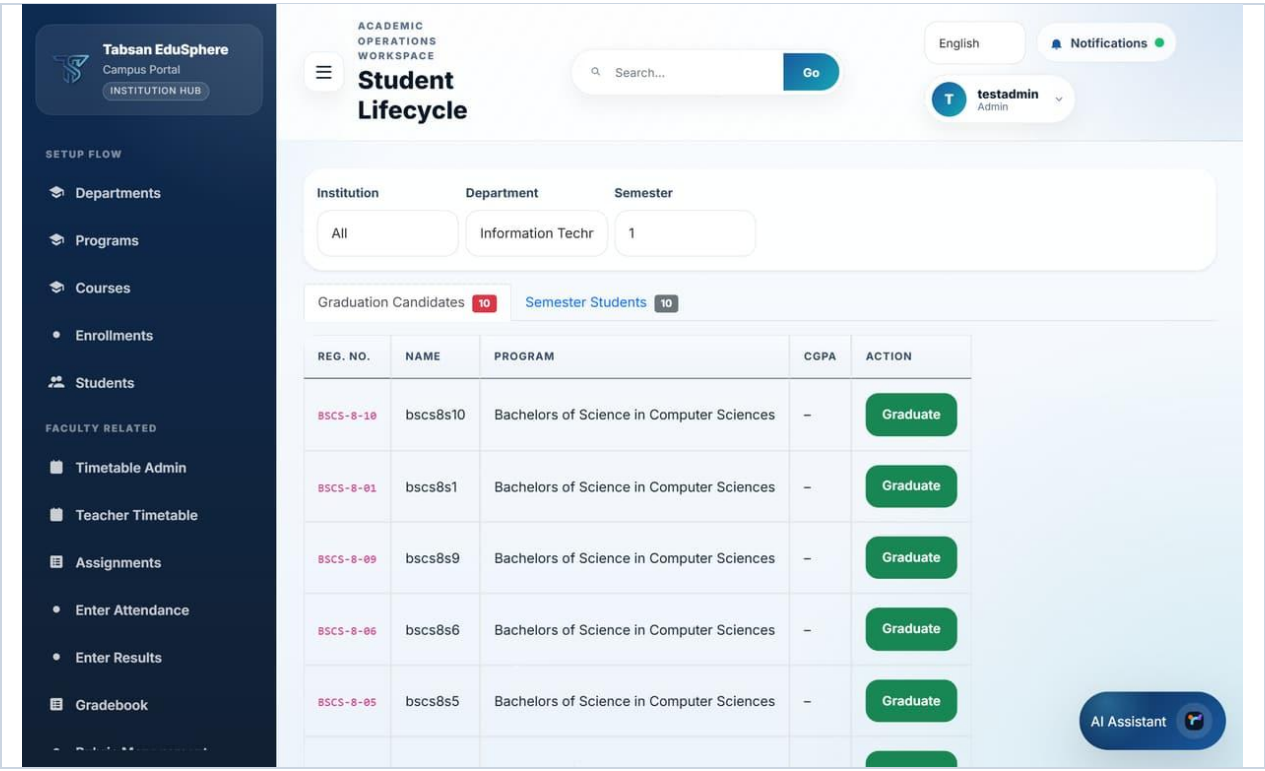

Figure 10.5 *Department selected*

© 2026 Tabsan Nexora. All rights reserved.

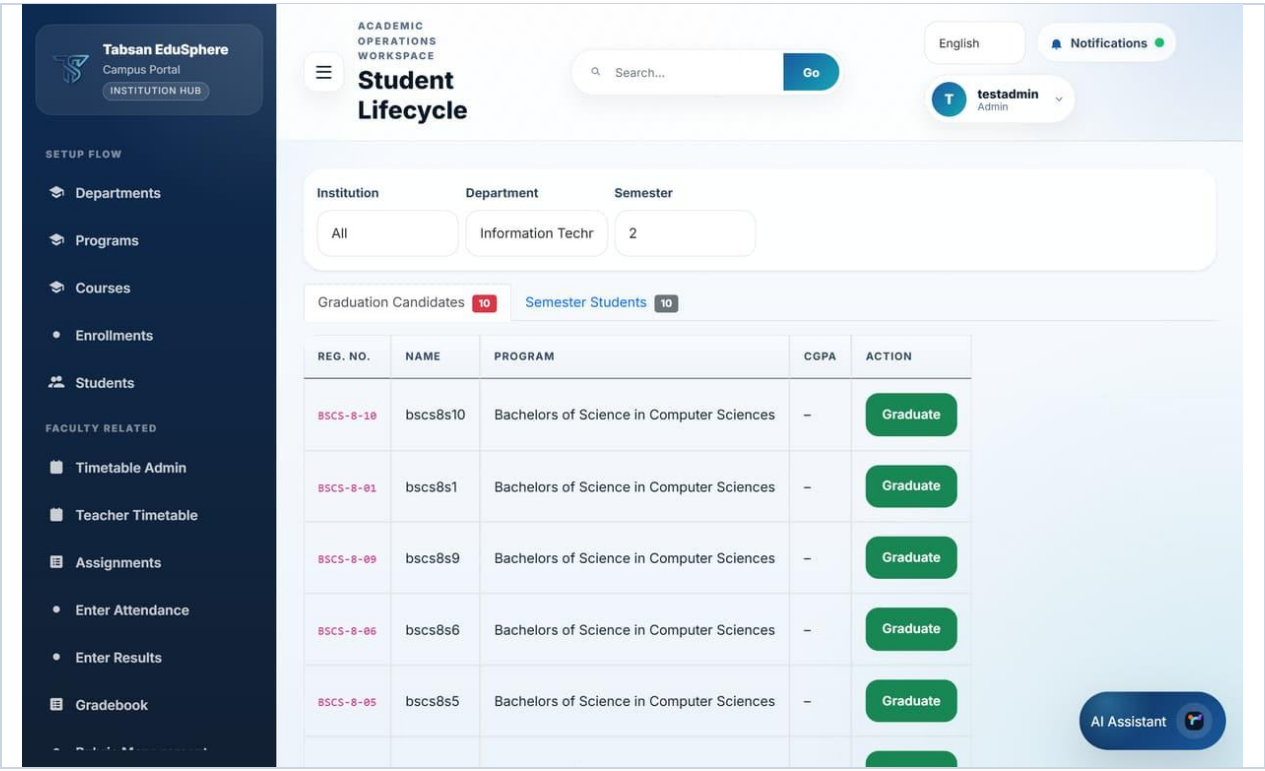

Figure 10.6 *Students in the selected semester*

What happens next

Promoted students move to the next level and appear in its lists. Graduated students change to the Graduated status and become eligible for certificates.

> **IMPORTANT** University students must have their FYP created before the final promotion, because promoting past the last semester graduates the student automatically.

10.6 Study Plan

Available to: SuperAdmin, Admin, Faculty

A study plan records the courses a student intends to take in future semesters. Plans are reviewed by an academic advisor, which helps students avoid missing prerequisites or required courses.

Procedure

1. Choose the **Department** and the **Student**, then click **Create** to start a plan.
2. Open the plan and add the courses the student intends to take. The portal can also suggest courses through its recommendations.
3. The advisor (Faculty) reviews the plan, adds advisor notes, and endorses or rejects it.

© 2026 Tabsan Nexora. All rights reserved.

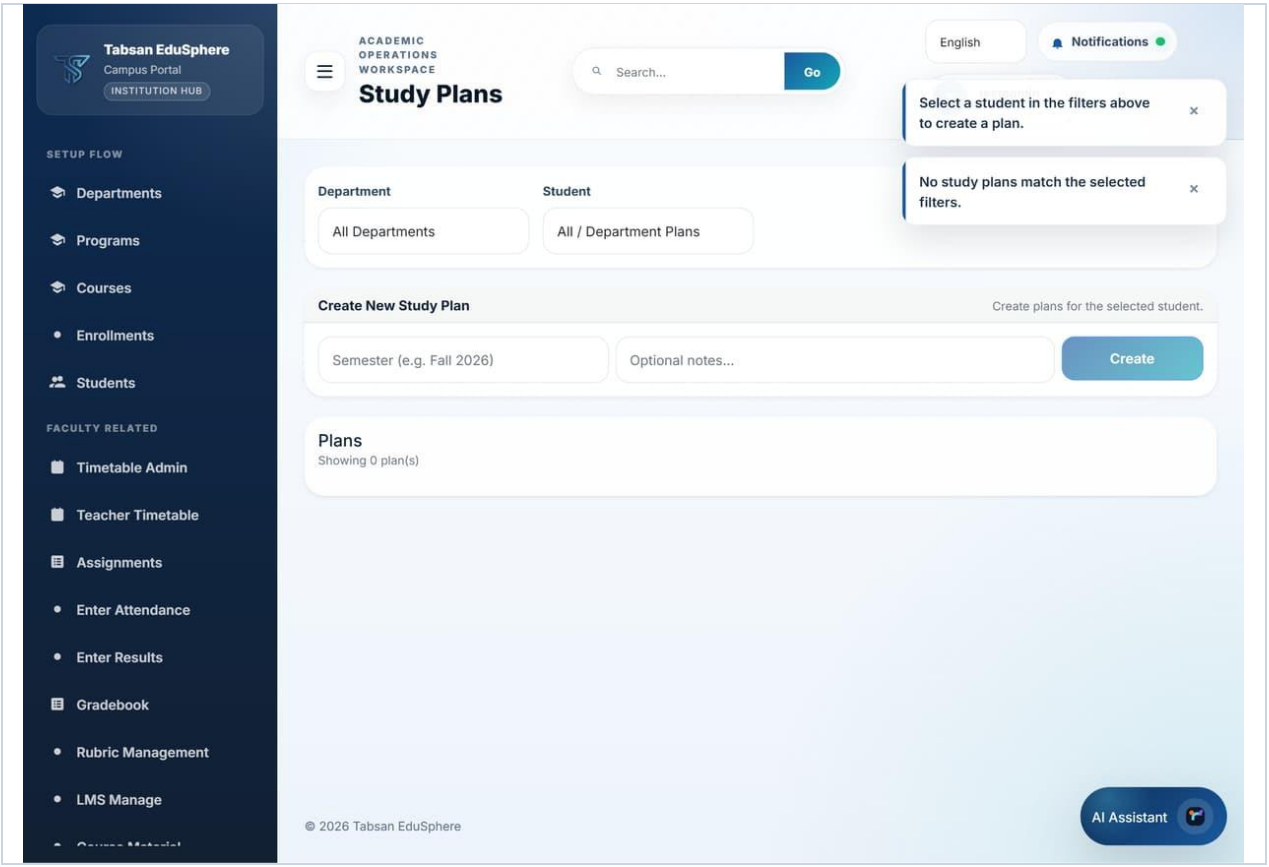

Figure 10.7 *Study Plan*

Study plan statuses

Status	Meaning
Pending	Waiting for advisor review.
Endorsed	Approved by the advisor.
Rejected	Returned with advisor notes; update and resubmit.

10.7 Final Year Projects (FYP)

Available to: SuperAdmin, Faculty

FYP tracks final year projects for University students in their last semester: the project title, the student, the supervisor, the department, the status and the final result. Supervisors also schedule meetings, which appear under **Upcoming Meetings**.

Procedure

1. A project is registered with **+ Create Project** (or proposed by the student), giving the **Title**, **Description**, **Department** and **Student**.
2. The project is reviewed and approved or rejected. An Admin or SuperAdmin assigns the **Supervisor**.
3. During the semester the supervisor holds meetings and tracks progress.
4. When the work is finished, completion is requested and approved, then the supervisor clicks **Enter Result** to record the FYP result and marks the project **Complete**.

© 2026 Tabsan Nexora. All rights reserved.

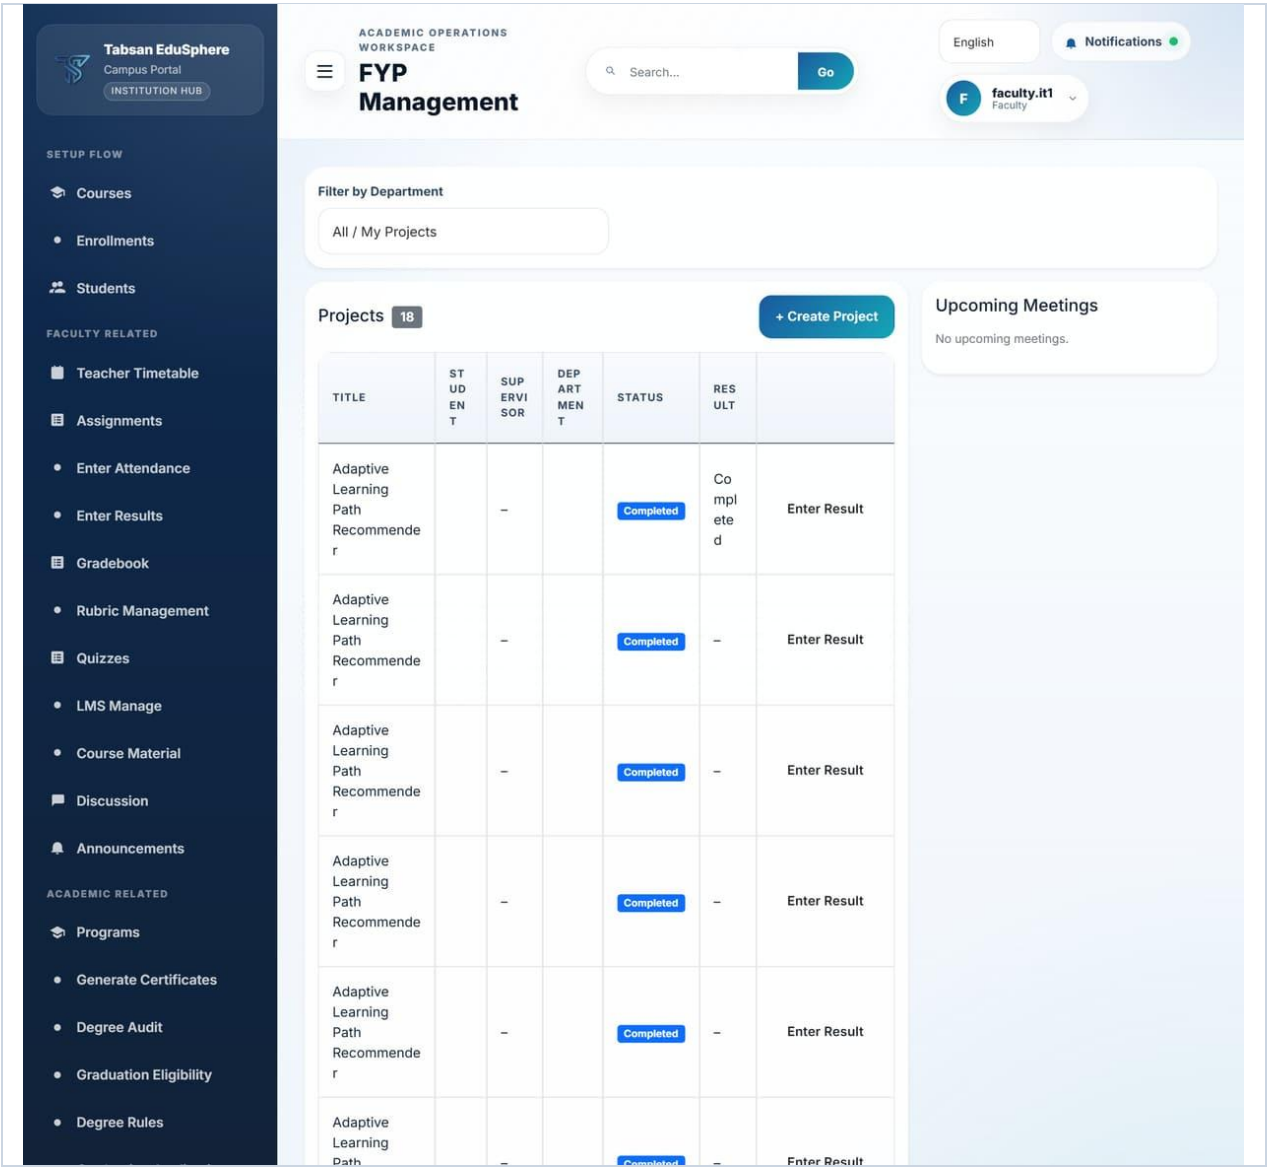

Figure 10.8 *FYP (Faculty view)*

FYP statuses

Status	Meaning
Proposed	Submitted for approval.
Under Review	Being reviewed by the department.
Approved	Accepted; work can start.
In Progress	Work is under way with a supervisor.
Completed	Finished and graded. Required before graduation.
Rejected	Not accepted; a new proposal is needed.

© 2026 Tabsan Nexora. All rights reserved.

11 Graduation and Certificates

Graduation applies to University programs. The portal checks each student against the program's degree rule, takes the application through a three-stage approval, and then makes certificates available.

11.1 Degree Rules

Available to: SuperAdmin (edit), Admin and Faculty (view)

A degree rule sets what a University program requires before a student can graduate. Without a rule, the degree audit for that program reports "No degree rule has been configured".

Procedure

1. Choose the **Academic Program**.
2. Enter the minimum total, core and elective credits and the minimum GPA.
3. Click **Create Rule**. Existing rules are listed below, with **Delete** to remove one.

Fields and options

Field	What to enter or choose
Min Total Credits	The total credit hours the student must complete.
Min Core Credits / Min Elective Credits	How many of those credits must come from core courses and from electives.
Min GPA	The lowest CGPA allowed for graduation, for example 2.00.

© 2026 Tabsan Nexora. All rights reserved.

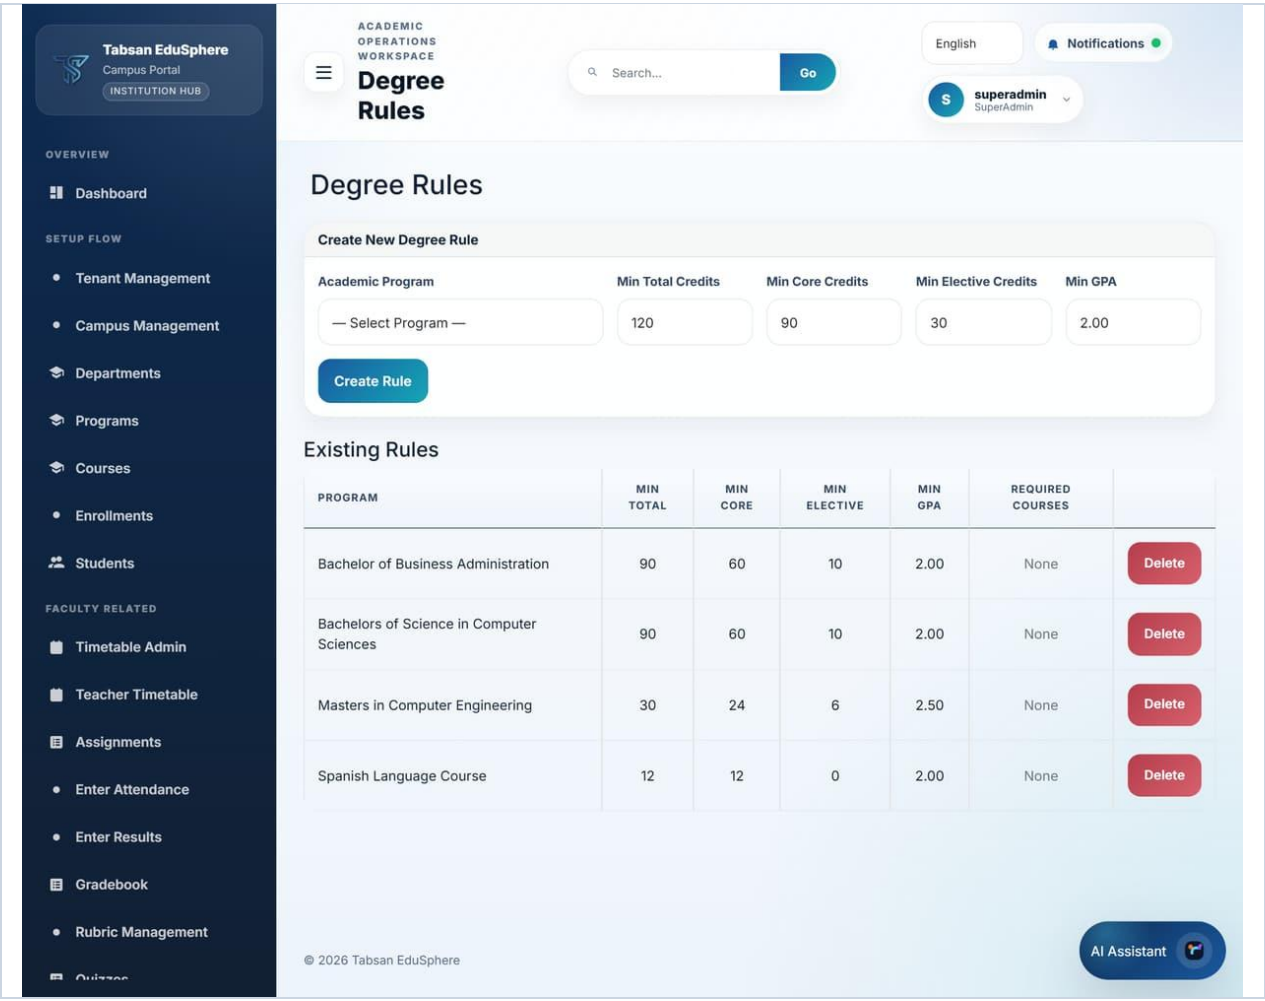

Figure 11.1 *Degree Rules*

11.2 Degree Audit

Available to: SuperAdmin, Admin, Faculty, Student

Degree Audit compares a student's completed courses with the program's degree rule and shows what is still missing. Staff choose a **Student** and click **Load Audit**. Students see their own audit straight away.

The audit lists completed courses with their credits, type (core or elective) and grade points, and an **Unmet Requirements** box such as "Total credits: 84/90 required".

© 2026 Tabsan Nexora. All rights reserved.

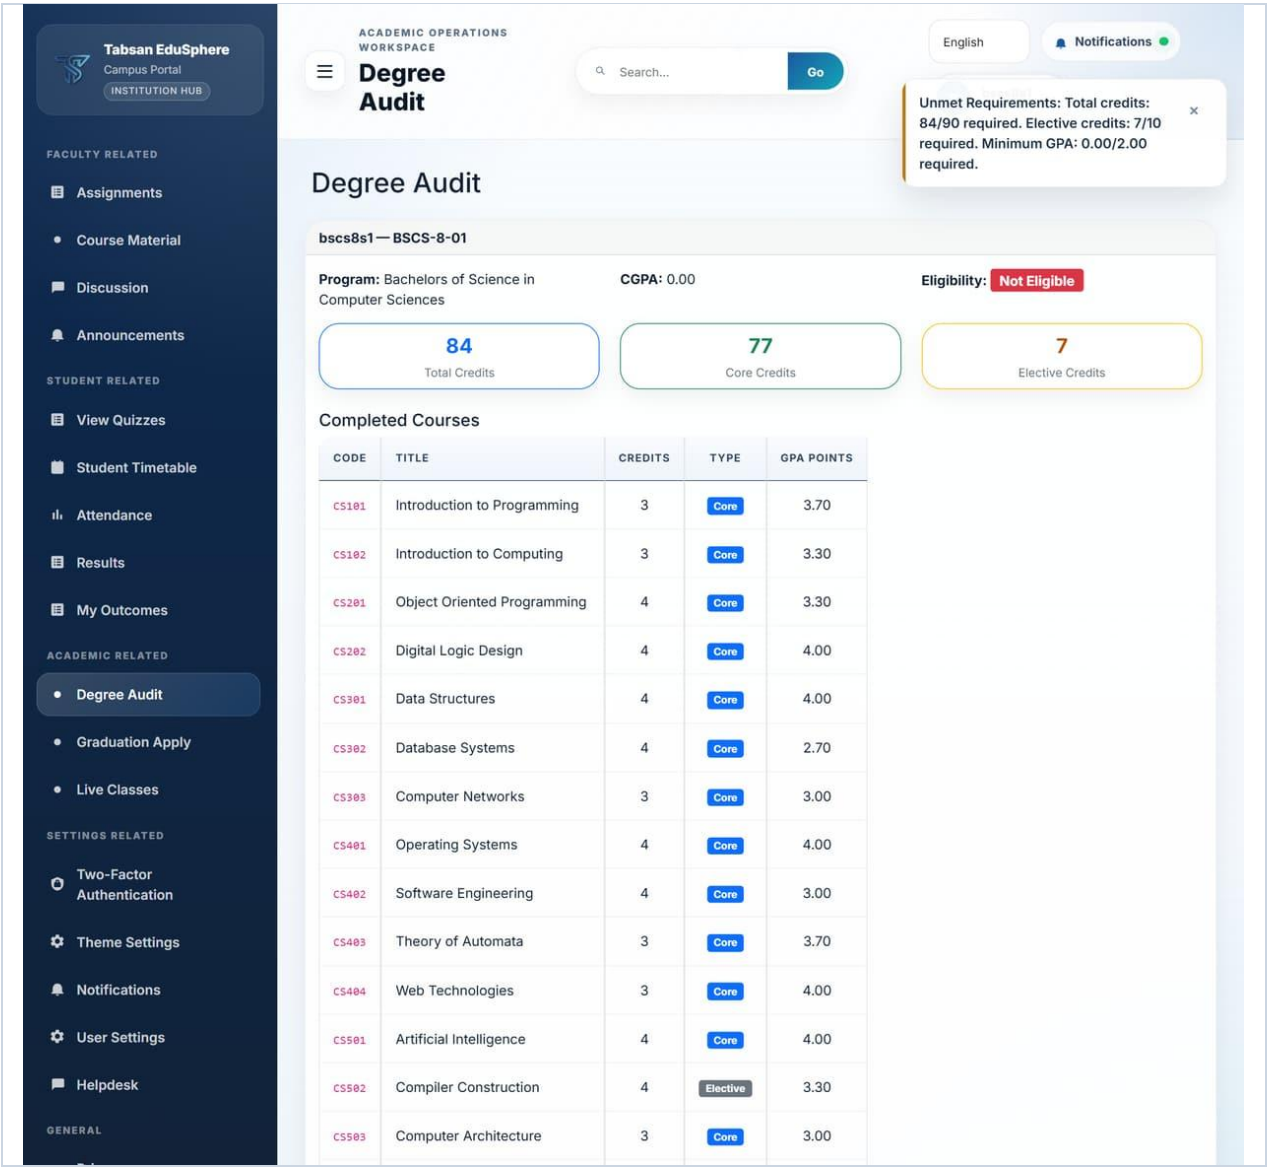

Figure 11.2 *Degree Audit (Student view)*

Good to know

- Students should check their degree audit at the start of the final year, so any missing courses can still be taken.

11.3 Graduation Eligibility

Available to: SuperAdmin, Admin, Faculty

Graduation Eligibility lists students with their credits earned, CGPA, unmet requirements and eligibility status, so staff can see who is ready to graduate. Click **View Audit** for the detail behind a student's status. Faculty see the students of their own departments.

© 2026 Tabsan Nexora. All rights reserved.

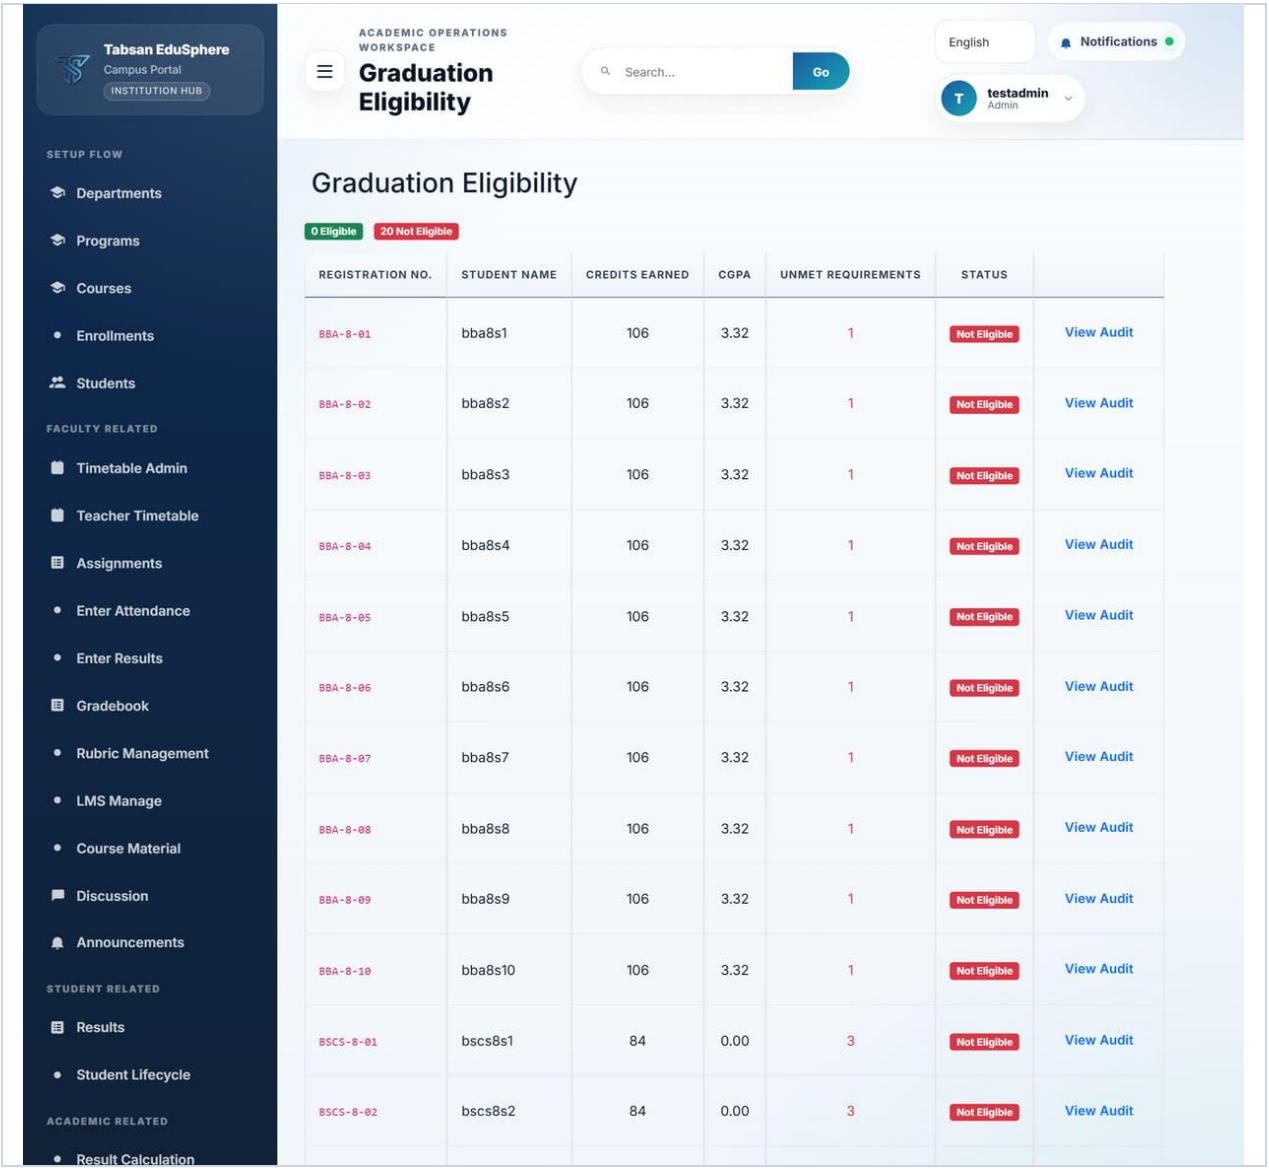

Figure 11.3 *Graduation Eligibility*

11.4 Applying for graduation (Students)

Available to: Student

An active University student in the final semester with a completed FYP can apply for graduation from the portal.

Before you start

- Your degree audit shows no unmet requirements, and your FYP status is Completed.

Procedure

1. Open **Graduation Apply**.
2. Optionally add a **Personal Note** for the reviewers.
3. Click **Submit Application**. Your application and its current stage are shown on the same page.

© 2026 Tabsan Nexora. All rights reserved.

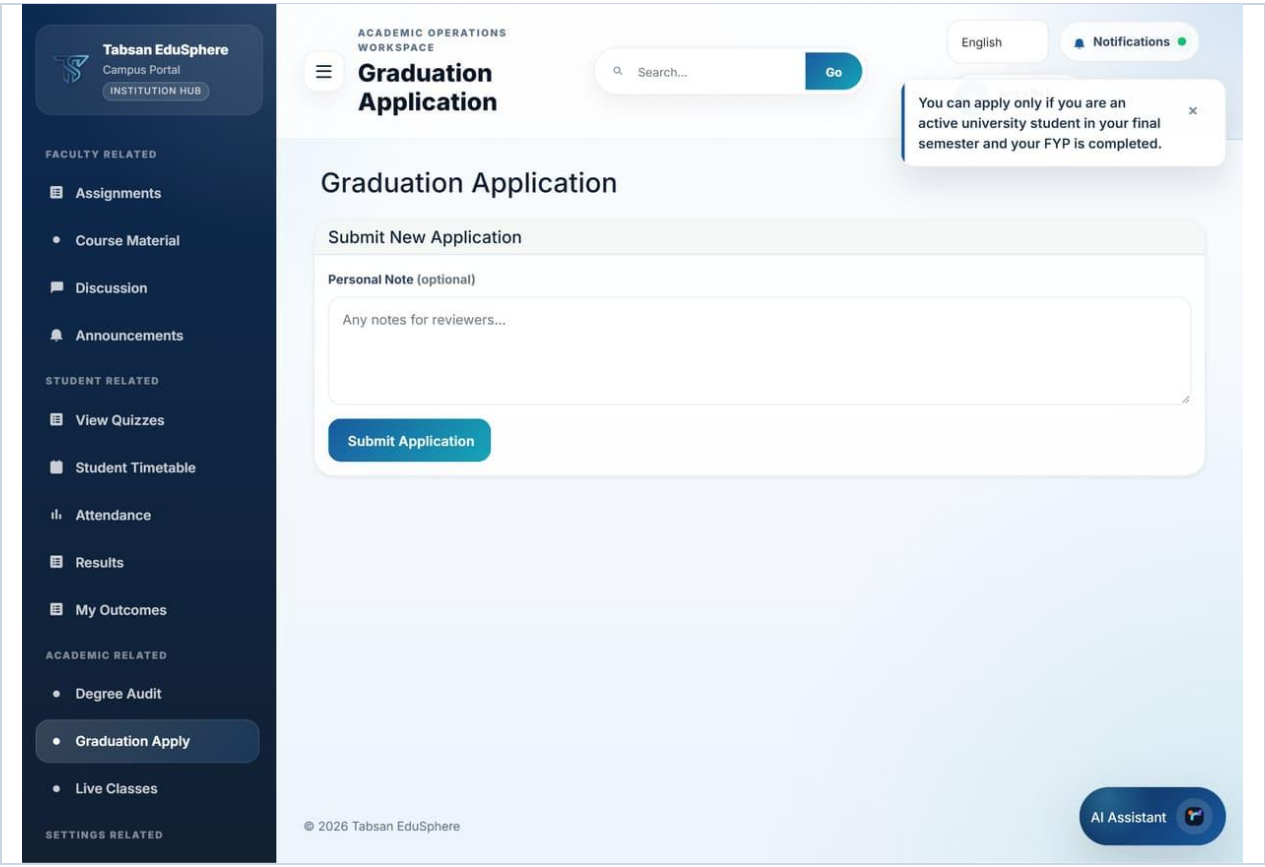

Figure 11.4 *Graduation Application (Student)*

11.5 Graduation Applications

Available to: SuperAdmin, Admin, Faculty

Applications are approved in three stages: first by Faculty, then by an Admin, and finally by a SuperAdmin. Any of these approvers can reject an application at their stage.

Procedure

1. Open **Graduation Applications**.
2. Filter by **Status** and **Department** and click **Filter**.
3. Click **View** on an application, review the student's audit, and approve or reject it.

© 2026 Tabsan Nexora. All rights reserved.

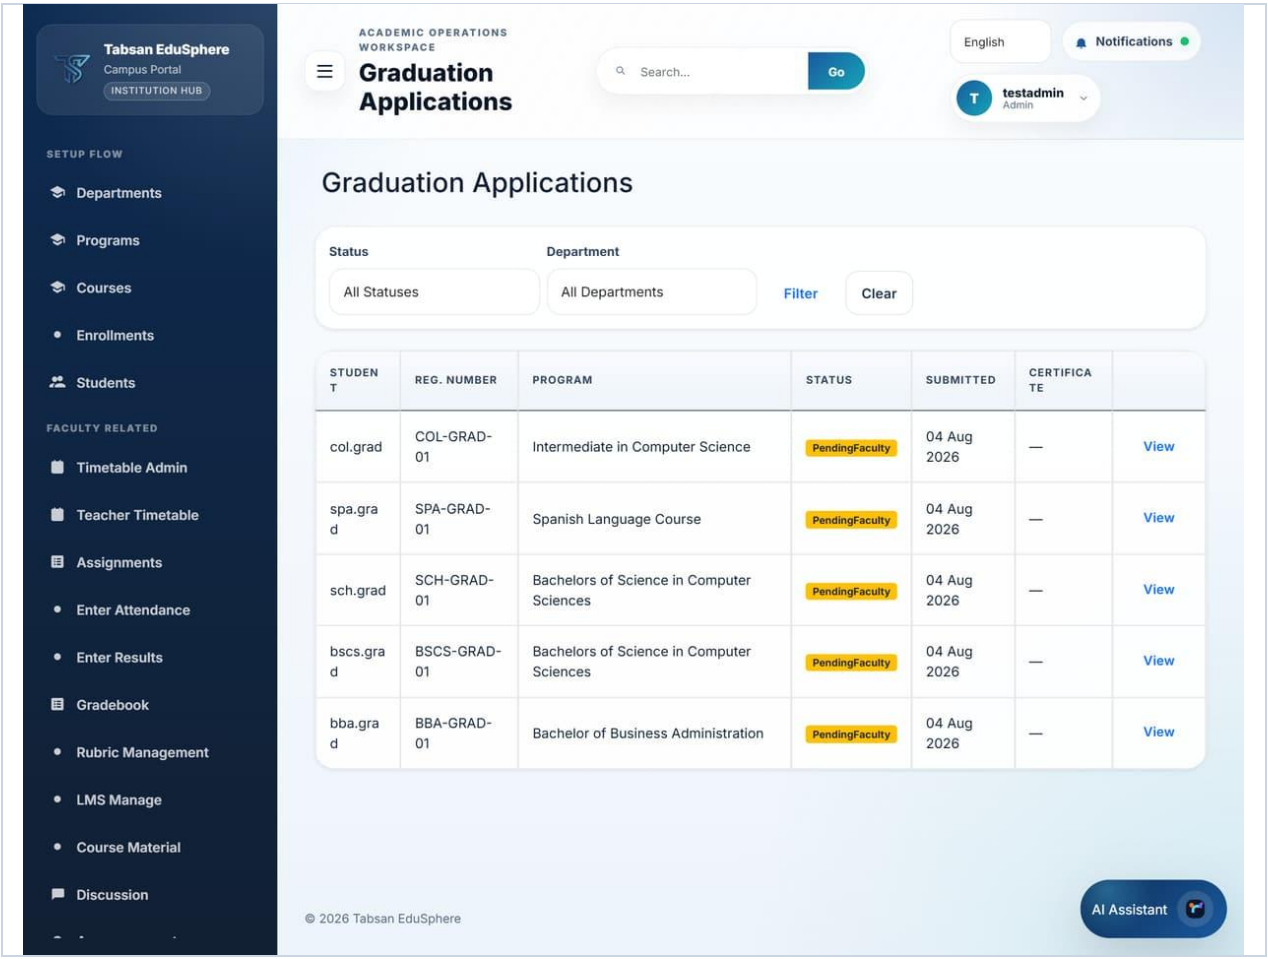

Figure 11.5 *Graduation Applications*

Application statuses

Status	Meaning
Pending Faculty	Waiting for a Faculty approver.
Pending Admin	Approved by Faculty; waiting for an Admin.
Pending Final Approval	Approved by an Admin; waiting for the SuperAdmin.
Approved	Graduation approved; the certificate becomes available.
Rejected	Not approved. The student can see the outcome on their application and should speak to their department.

11.6 Generate Certificates

Available to: SuperAdmin, Admin, Faculty

Generate Certificates produces official documents for students: degree certificates and transcripts for University graduates, and completion certificates and report cards for School and College students. Files are named with the registration number and document type.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Open **Generate Certificates** and filter by institution, department, course and class; use **Search Students** to find a student, then click **Apply**.
2. In the student's row, choose the document type and click **Generate**. The generated files are listed under Certificates for download.
3. Under **Certificate Templates**, use **Download Default** to get the standard layout, or **Import Template** to upload your institution's own design.

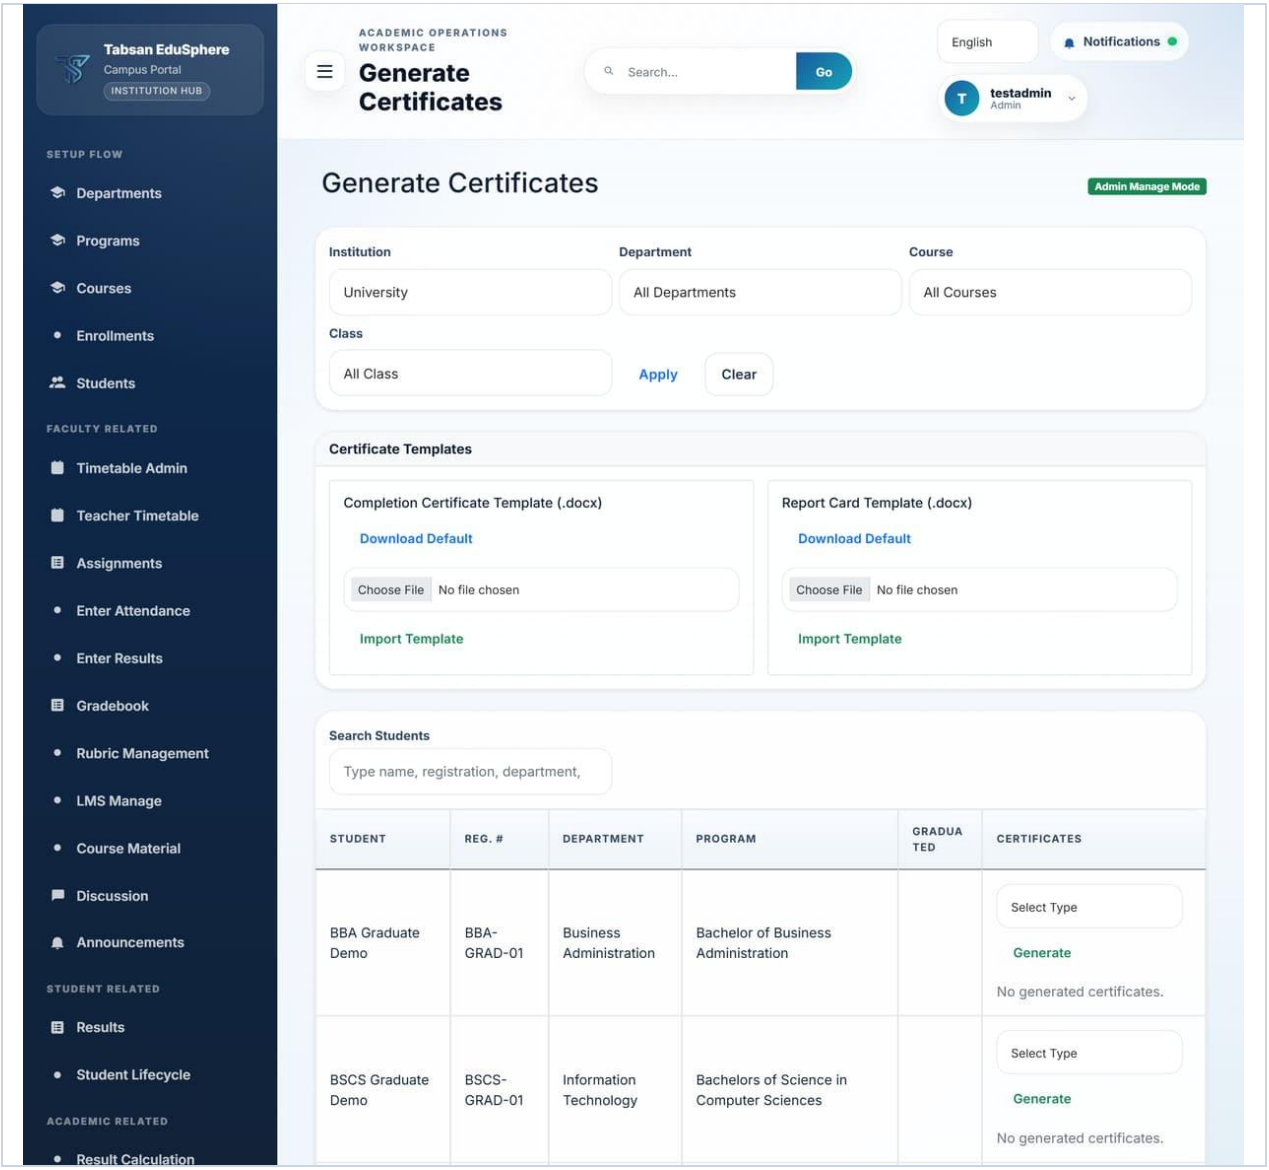

Figure 11.6 *Generate Certificates*

Good to know

- Degree certificates are available only for University graduates. School completion certificates require Class 10, and College ones require Class 11 and 12 results.

© 2026 Tabsan Nexora. All rights reserved.

12 Reports and Analytics

Reports produce lists and summaries you can view on screen and download, while Analytics shows trends as charts.

12.1 Report Center

Available to: SuperAdmin, Admin, Faculty, Finance

Report Center lists the reports your role may run, as cards. Finance users see only the Payment Summary; students do not have reports.

Report	What it shows
Attendance Summary	Attendance totals and percentages by offering and student.
Enrollment Summary	Enrolment counts by department, program and semester.
FYP Status Report	Final year projects with supervisor, status and result.
GPA & CGPA Report	Semester GPA and CGPA per student (University only).
Low Attendance Warning	Students below the attendance threshold (default 75%).
Payment Summary	Fee receipts by status and amount.
Result Summary	Marks and grades by subject and exam type.
Semester Results	Results for a whole semester or class.
Student Transcript	A student's full academic record.

Procedure

1. Open **Report Center** and click a report card.
2. Choose the filters (for example **Department** and **Program**) and click **Filter**. Some reports need a particular filter: Semester Results needs a semester, and Student Transcript needs a student.
3. Review the results on screen. A summary line shows the number of records and key totals.
4. Click **Excel**, **CSV** or **PDF** to download the report in that format.

© 2026 Tabsan Nexora. All rights reserved.

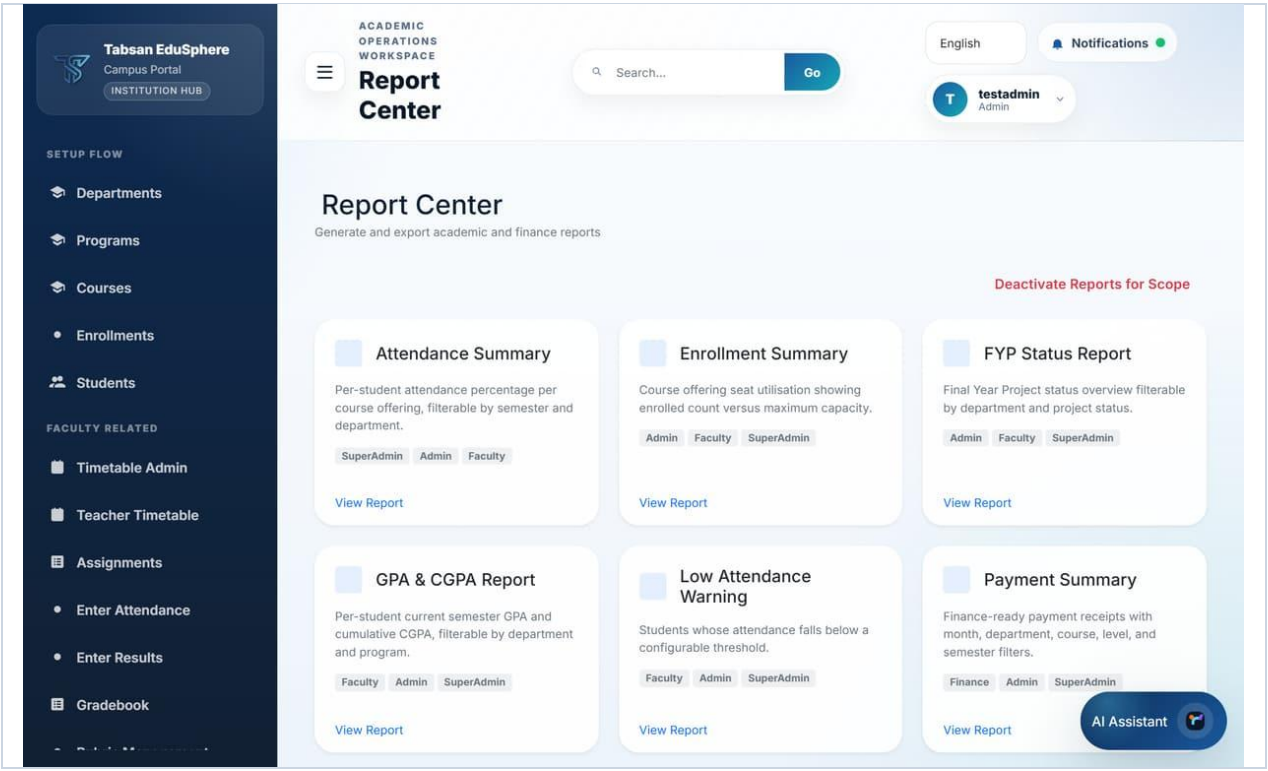

Figure 12.1 *Report Center*

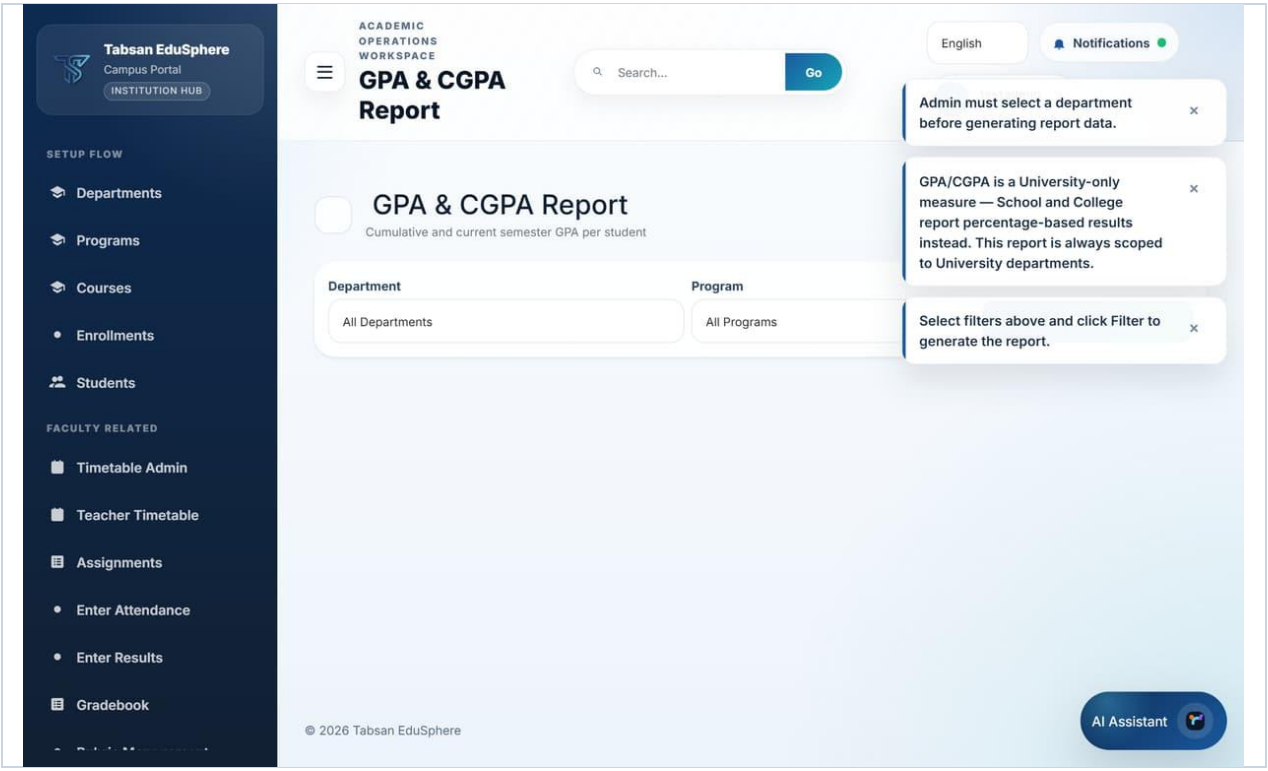

Figure 12.2 *Report filters*

© 2026 Tabsan Nexora. All rights reserved.

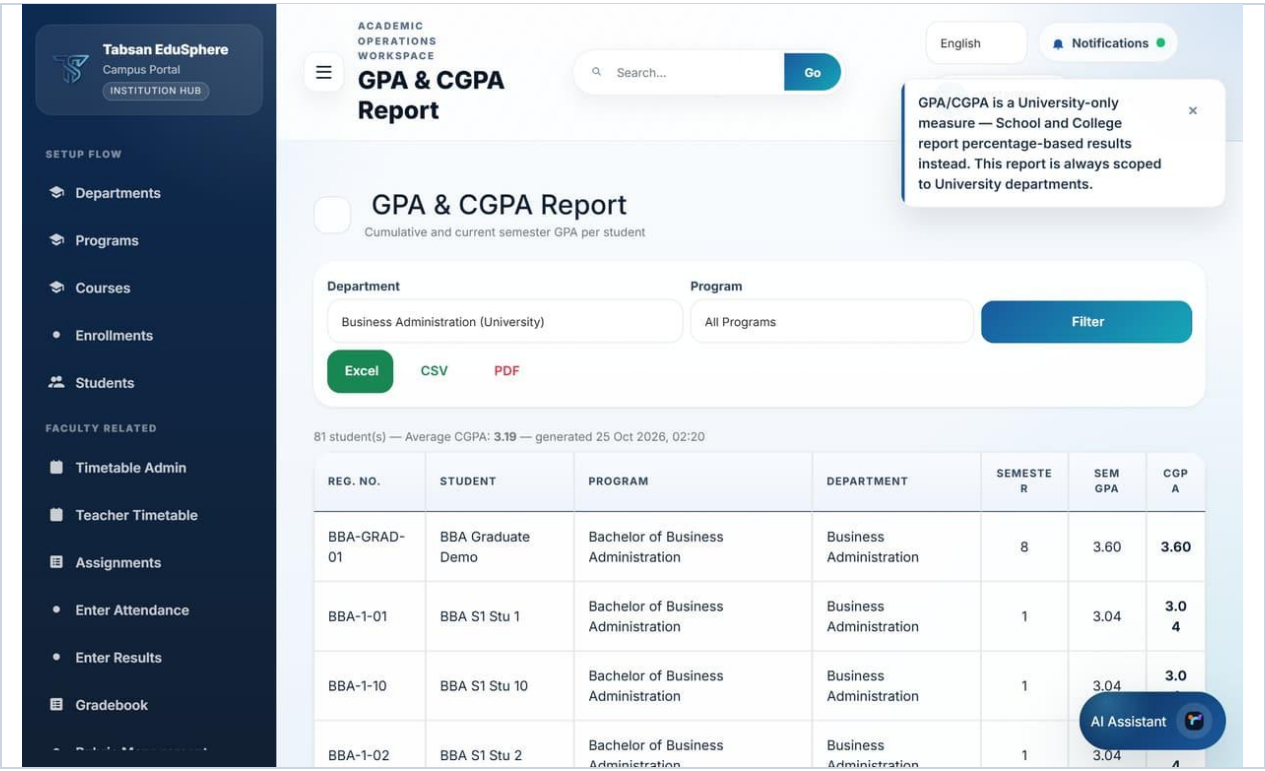

Figure 12.3 *GPA & CGPA Report generated, with export buttons*

Good to know

- Excel is best for further analysis, CSV for importing into other systems, and PDF for printing or sharing.
- Reports reflect published data only; unpublished marks are not included.

> **NOTE** Admins must choose a department before a report generates. SuperAdmin can switch reports off for a tenant or campus with Deactivate Reports for Scope.

12.2 Analytics

Available to: SuperAdmin, Admin, Faculty, Finance

Analytics gives an overview of performance, attendance and assignments, with headline figures (for example average marks and overall attendance) and charts of trends over time, plus a student table you can sort and review.

Procedure

1. Open **Analytics**.
2. Choose the institute, campus, department, course and semester/class you are interested in, and click **Apply Filters**.
3. Read the headline cards and charts. Click **Reset** to clear the filters.

© 2026 Tabsan Nexora. All rights reserved.

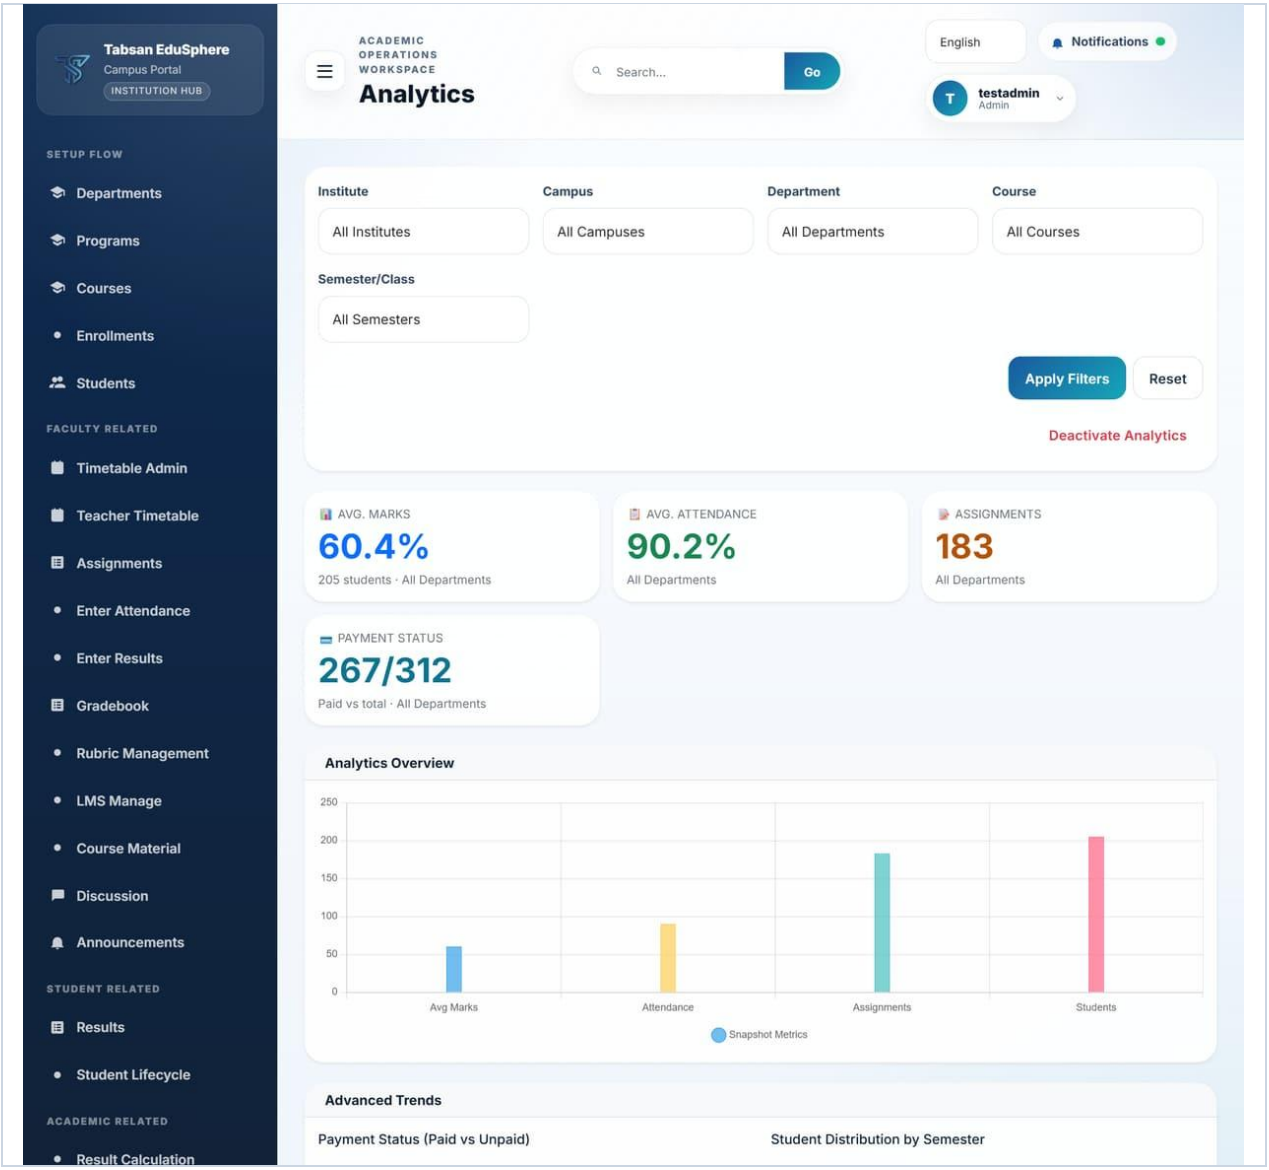

Figure 12.4 *Analytics overview*

© 2026 Tabsan Nexora. All rights reserved.

13 Finance

Finance covers fee receipts: issuing them to students, recording payment and keeping the totals accurate.

13.1 Fee receipts (Payments)

Available to: SuperAdmin, Admin, Finance

Payments manages fee receipts from creation to confirmation. Each receipt belongs to one student and has an amount, a receipt number, a description and a due date. The list shows all receipts with their status, and can be filtered by student and paged with **Previous** and **Next**.

Procedure

1. Open **Payments**.
2. Under **Create Fee Receipt**, choose the **Student**, enter the **Amount**, **Receipt No**, **Description** and **Due Date**.
3. Click **Create**. The receipt starts as Pending.
4. When payment has been received, click **Confirm** on the receipt. It changes to Paid.
5. If a receipt was issued in error, click **Cancel**.
6. For many receipts at once, click **Export Template**, fill in the CSV and upload it with **Import CSV**.

Fields and options

Field	What to enter or choose
Student	The student the fee is for.
Amount	The amount due, in your institution's currency.
Receipt No	Your reference number, for example RCP-2026-0101. Use a unique number for each receipt.
Description	What the fee is for, for example "Semester 3 tuition fee".
Due Date	The date by which the student should pay.

© 2026 Tabsan Nexora. All rights reserved.

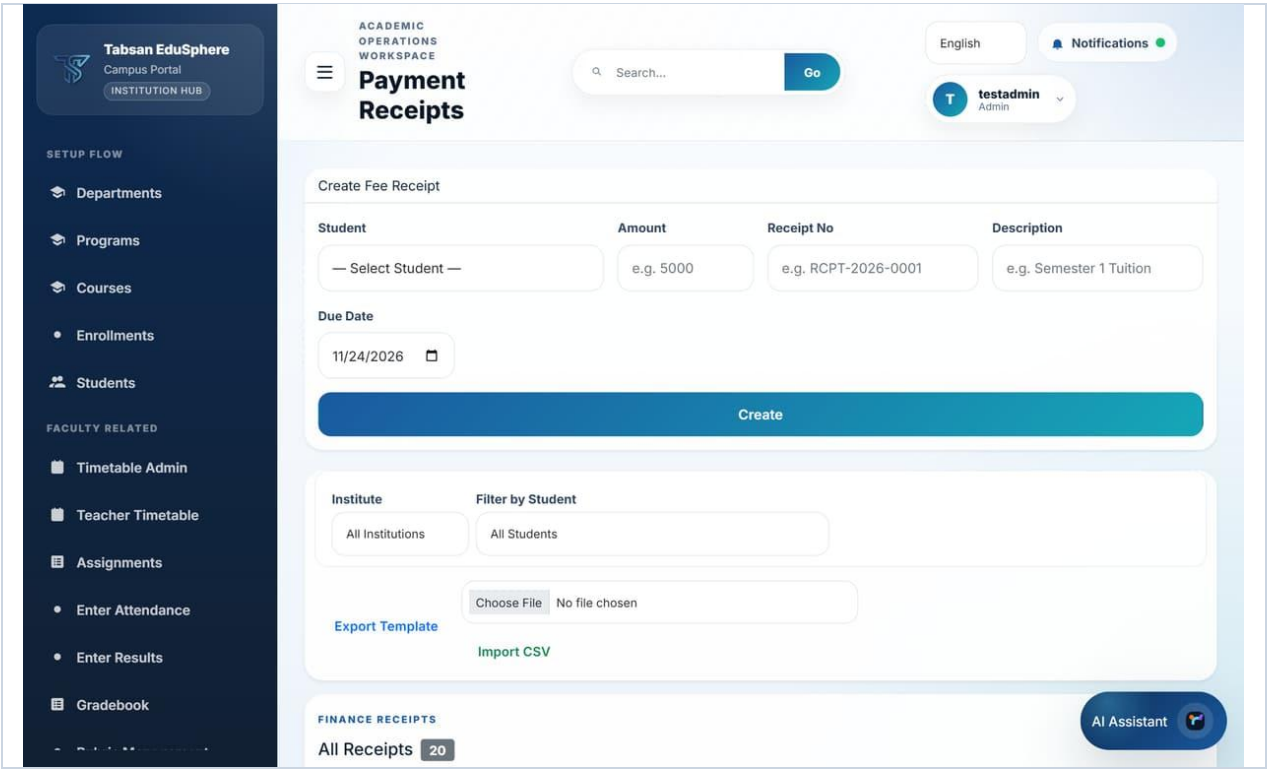

Figure 13.1 *Payments – all receipts*

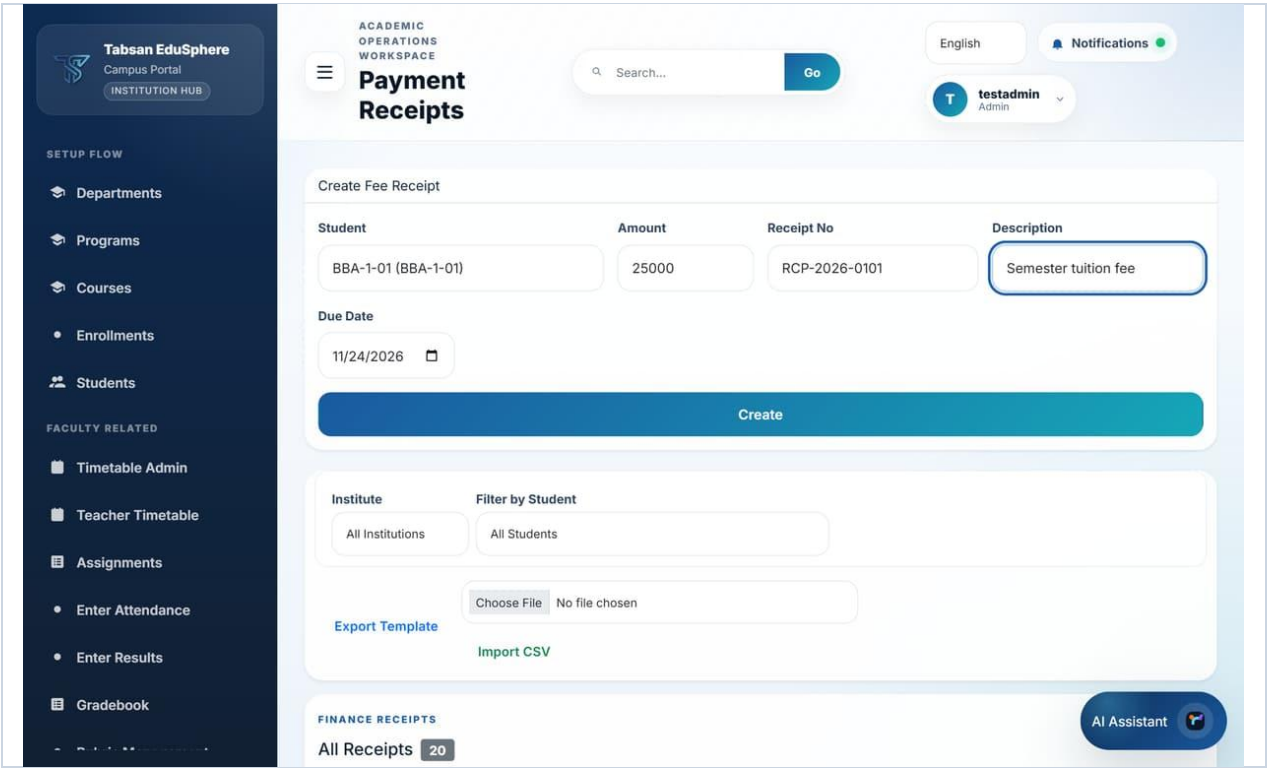

Figure 13.2 *Create Fee Receipt form completed*

Receipt statuses

Status	Meaning
Pending	Issued and waiting for payment.
Submitted	The student has reported payment and supplied proof; waiting for Finance to confirm.

© 2026 Tabsan Nexora. All rights reserved.

Status	Meaning
Paid	Payment confirmed by Finance or an Admin. Cannot be cancelled.
Cancelled	Withdrawn. Hidden from the student's own list but kept for audit.

TIP Use Filter by Student to see one student's payment history, and Report Center > Payment Summary for totals.

© 2026 Tabsan Nexora. All rights reserved.

14 Users, Communication and Personal Settings

This chapter covers creating accounts, keeping your own details and password up to date, notifications, the helpdesk and the look of the portal.

14.1 User Import and creating users

Available to: SuperAdmin, Admin

User Import creates accounts for students, faculty, admins and finance staff, either one at a time with a form or many at once from a CSV file. Every new account starts with the username as its temporary password and must choose a new password at first sign-in.

For students, the import also creates the student's academic profile (registration number, program and department), so they can use the student portal straight away.

Procedure

1. Open **User Import**.
2. Bulk: download **faculty-admin-import-template.csv** or **students-import-template.csv**, fill it in a spreadsheet (Username, Email and Role are required), save it as CSV, choose it in **CSV File** and click **Upload and Import**. Review the import report.
3. Single user: in **Create Single User**, enter the **Username**, **Email**, **Full Name** and **Role**. For a Faculty member choose the **Department**; for a Student choose the **Department** and **Program** and, optionally, a **Registration No.** (it defaults to the username). Mobile number, address and profile photo are optional.
4. Click **Create User**. A message confirms the account was created, or explains why it was not (for example, the username already exists).

Fields and options

Field	What to enter or choose
Username	The sign-in name. Must be unique. Also the temporary password.
Email	Used for notifications and password resets.
Role	Admin, Faculty, Student or Finance. SuperAdmin accounts cannot be created here.
Department (Faculty / Student)	The department the person belongs to.
Program (Student)	The program the student is admitted to. Choose a program of the selected department.
Registration No. (Student)	Optional. The student's registration number; if left blank, the username in capitals is used. Must be unique.
Campus Assignments	Optional. For staff who work on more than one campus: campus IDs separated by a | character.

© 2026 Tabsan Nexora. All rights reserved.

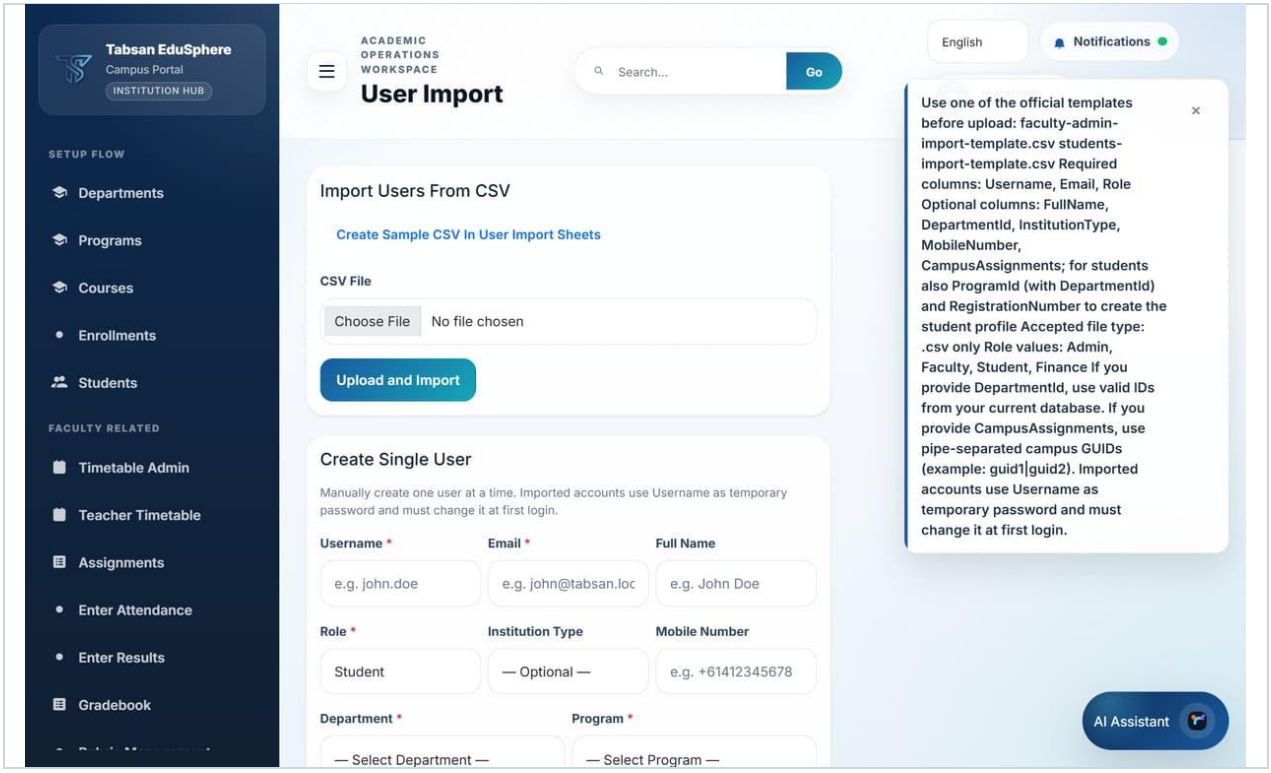

Figure 14.1 *User Import*

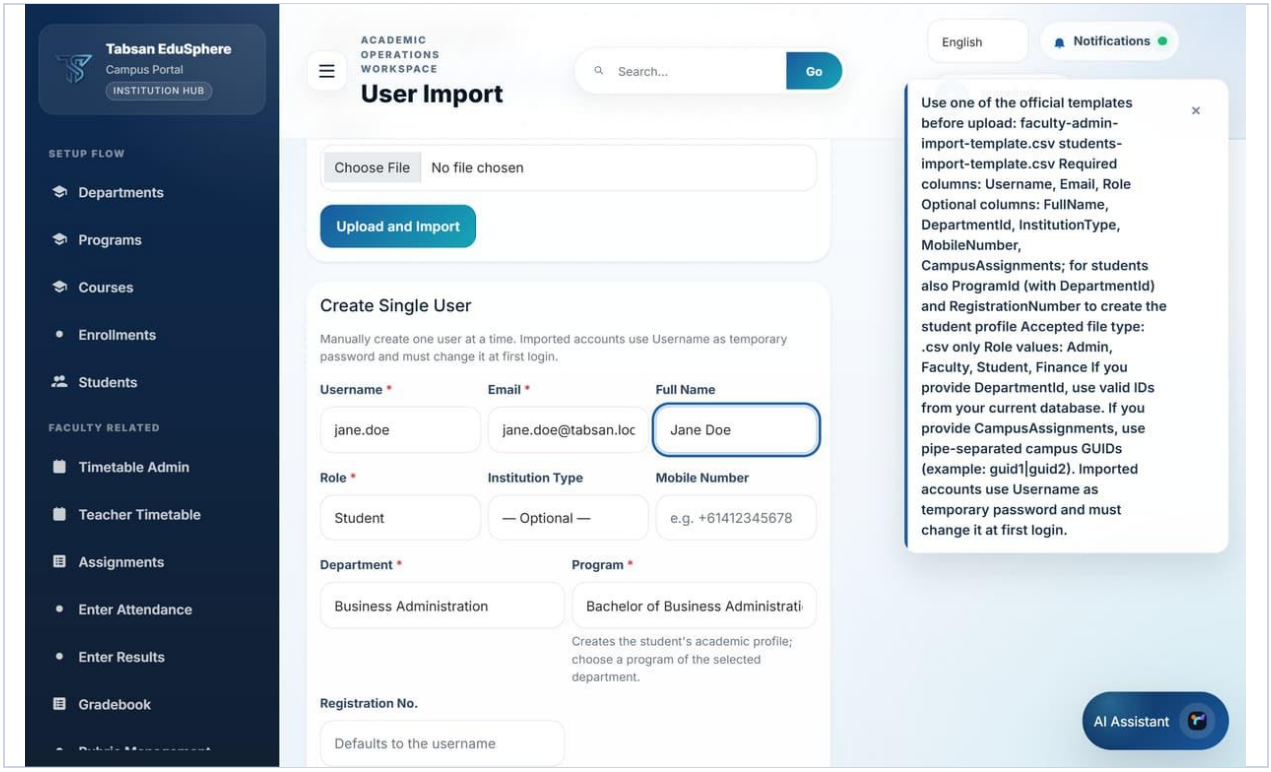

Figure 14.2 *Create Single User form for a student, with Department and Program*

What happens next

The import report shows how many rows were imported, how many were skipped as duplicates, and the reason for any errors, row by row. Fix the rows with errors and import just those rows again.

© 2026 Tabsan Nexora. All rights reserved.

> **TIP** In the students CSV template, fill DepartmentId and ProgramId (and optionally RegistrationNumber) to create each student profile during a bulk import.

14.2 User Settings

Available to: SuperAdmin, Admin, Faculty, Student, Finance

Every user can keep their own details up to date: email, mobile number, address and profile photo. This is also where you change your password.

Admins see an extra user directory on the left. They can search for a user in their scope, edit the user's name and contact details, and reset the user's password to the default when someone is locked out.

Procedure

1. Open **User Settings** from the sidebar or the profile menu.
2. Update your **Email**, **Mobile** or **Address** and click **Save Details**.
3. To change your profile picture, choose an image and click **Upload Photo** (JPG or PNG, up to 2 MB).
4. To change your password, enter your **Current password**, a **New password** and **Confirm new password**, then click **Change Password**.

© 2026 Tabsan Nexora. All rights reserved.

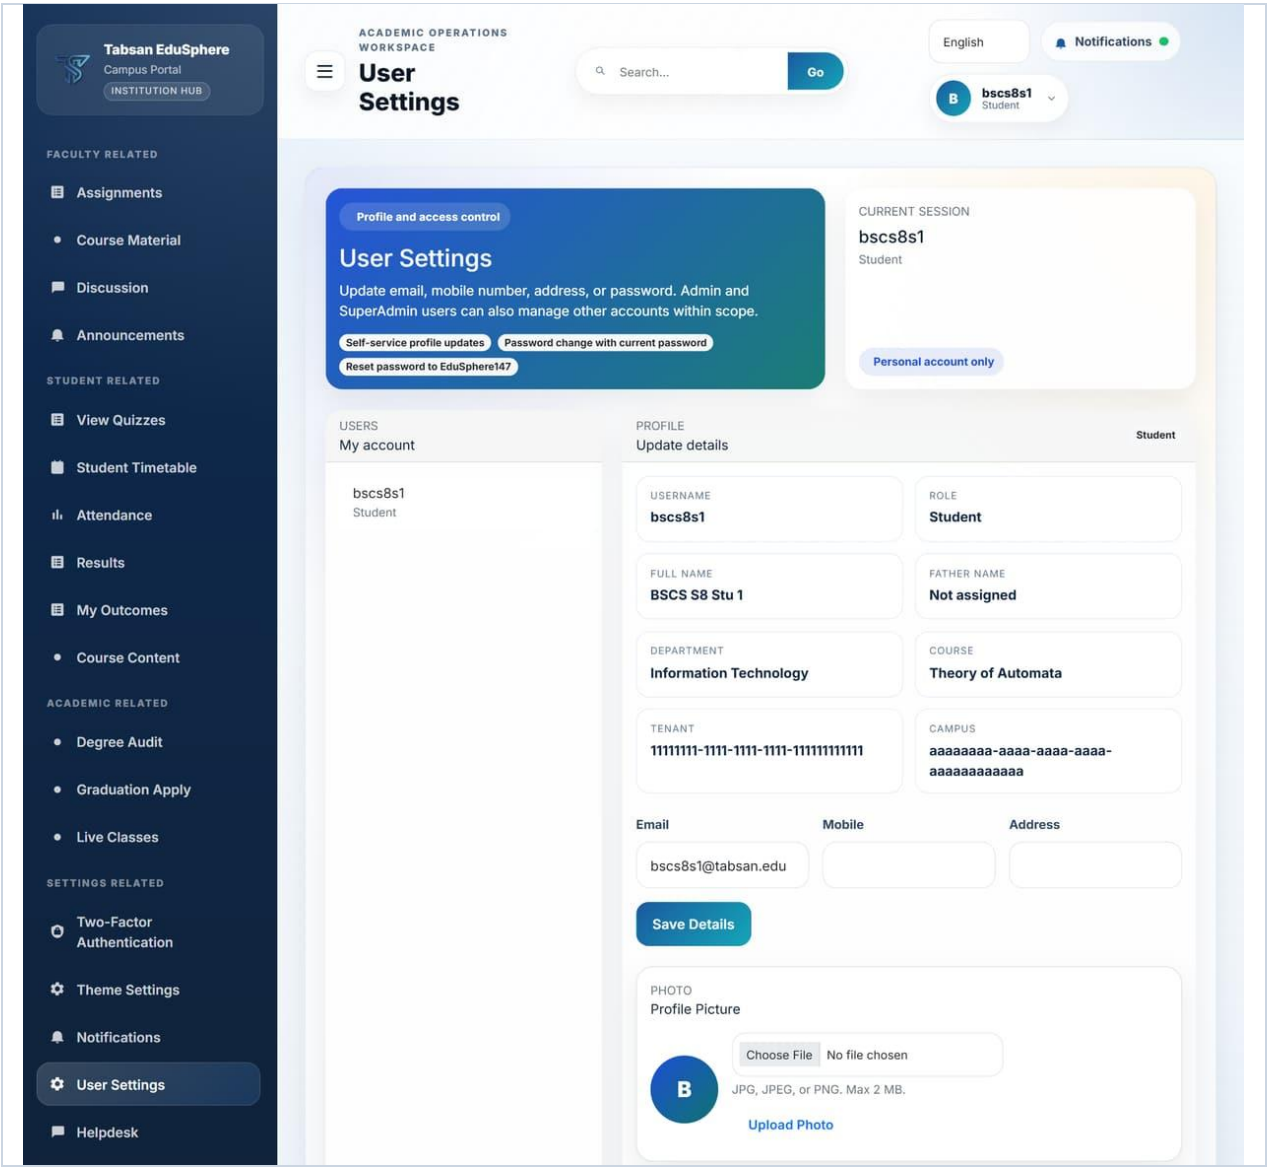

Figure 14.3 *User Settings (Student view)*

© 2026 Tabsan Nexora. All rights reserved.

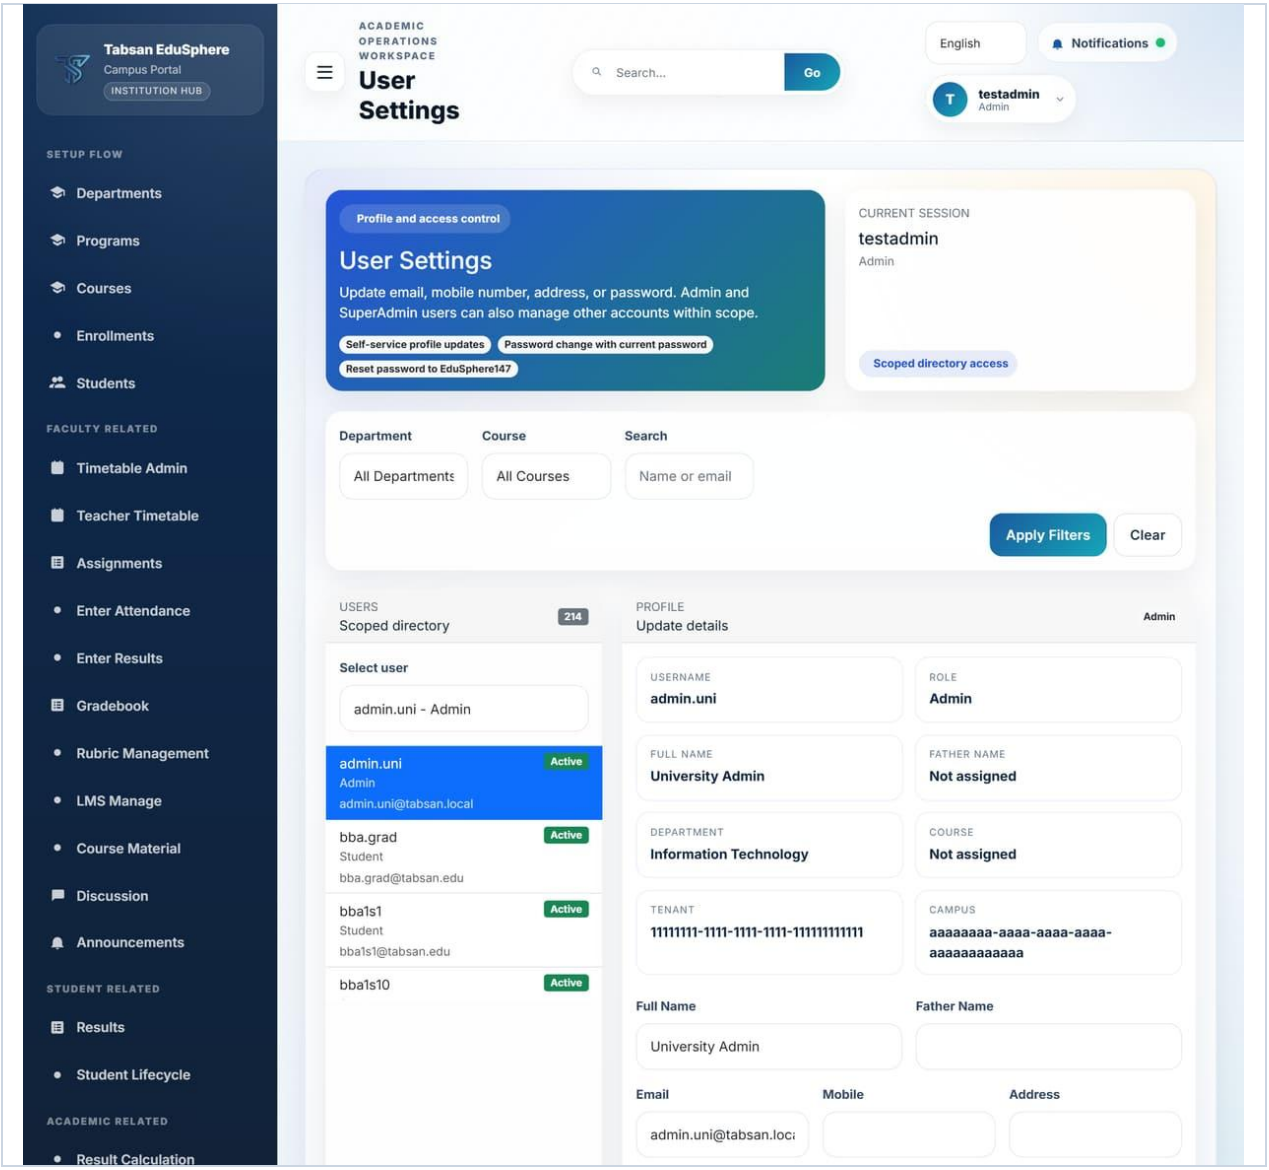

Figure 14.4 *User Settings with the user directory (Admin view)*

Good to know

- A new password must be at least 8 characters and different from your current one.
- Admins: after **Reset Password**, tell the user their temporary password; they must change it at their next sign-in.

14.3 Two-Factor Authentication

Available to: SuperAdmin, Admin, Faculty, Student, Finance

Two-factor authentication (2FA) protects your account even if someone learns your password. After you enable it, signing in needs both your password and a 6-digit code from an authenticator app on your phone, such as Microsoft Authenticator, Google Authenticator or Authy. The code changes every 30 seconds.

Before you start

- Install an authenticator app on your phone.

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Open **Two-Factor Authentication** from the profile menu.
2. Click **Start 2FA Setup**. A QR code and a manual key appear.
3. In your authenticator app, add an account and scan the QR code (or type the manual key).
4. Enter the 6-digit code shown in the app to verify and enable 2FA.
5. Write down the recovery codes shown and keep them somewhere safe. Each can be used once instead of a code if you lose your phone.
6. To turn 2FA off later, return to this page, enter a current code and disable it. The old secret is deleted, so setting it up again needs a new QR code.

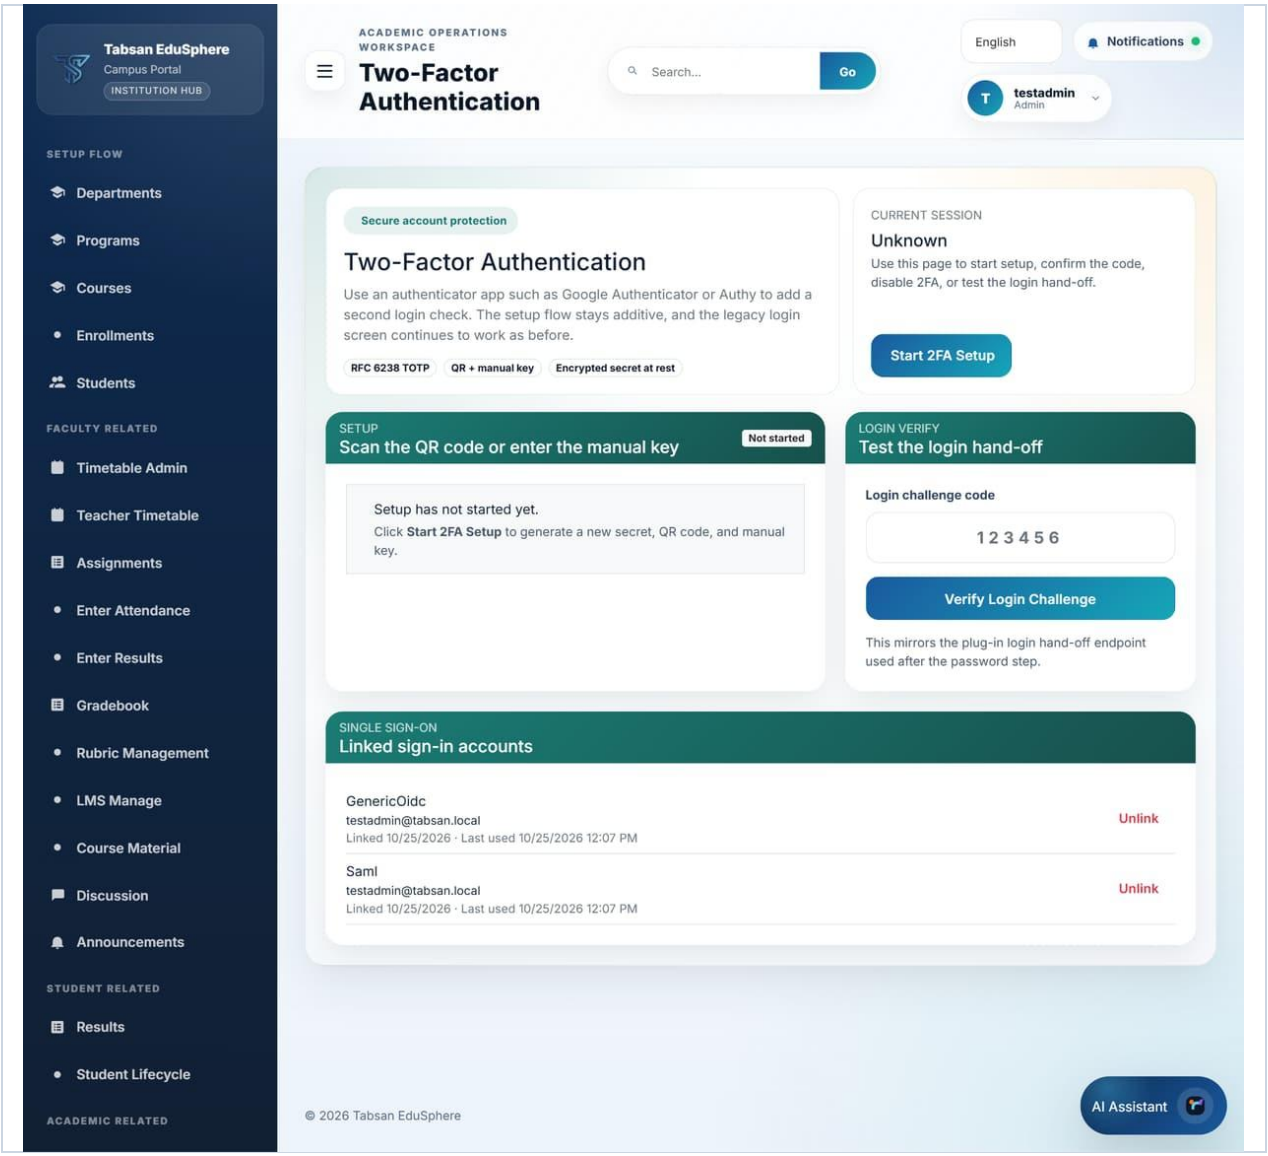

Figure 14.5 *Two-Factor Authentication*

> **IMPORTANT** If you lose your phone and your recovery codes, an administrator must reset two-factor authentication for you.

© 2026 Tabsan Nexora. All rights reserved.

14.4 Linked sign-in accounts

Available to: SuperAdmin, Admin, Faculty, Student, Finance

When your institution uses single sign-on, the **Two-Factor Authentication** page also shows **Linked sign-in accounts**: the institution accounts (for example Microsoft, Google or SAML) linked to your EduSphere account, with the email and the date each was linked.

Click **Unlink** to remove a link, for example after changing institution accounts. You can link it again by signing in with the provider's button. Administrators can see and remove the links of the users they manage.

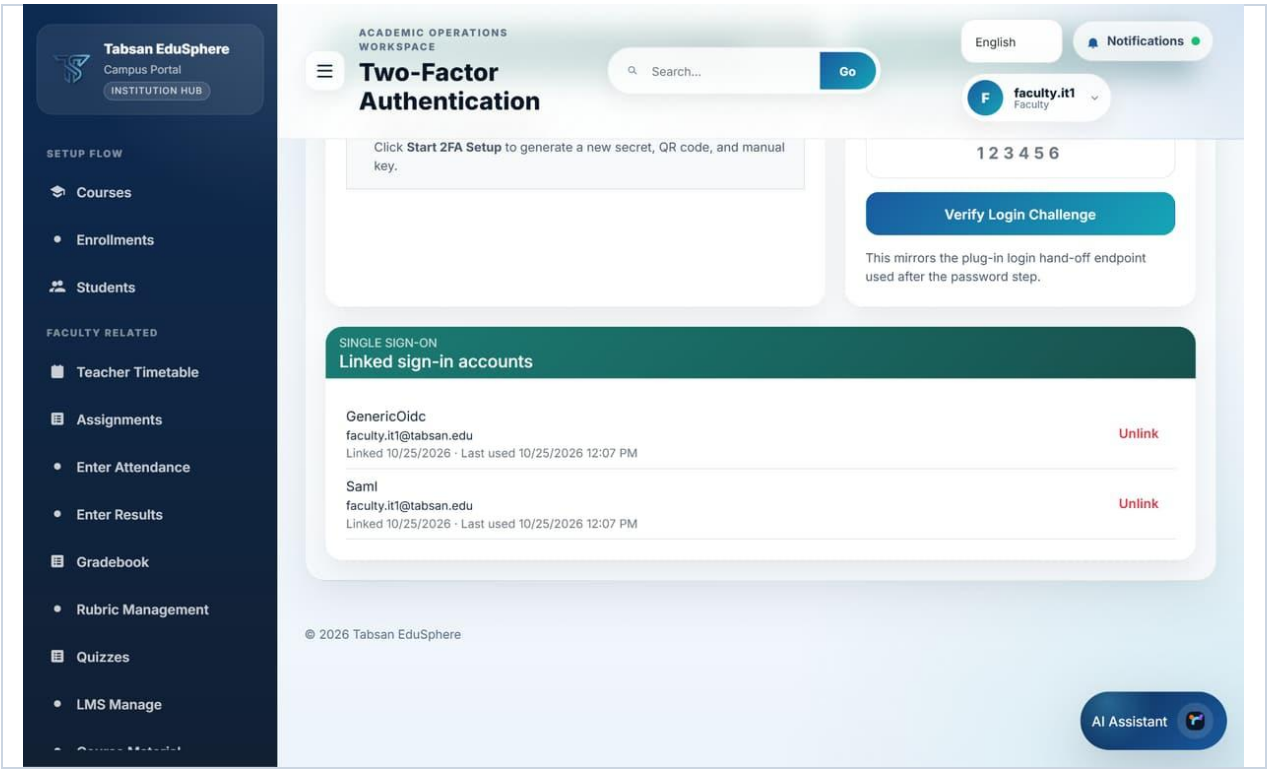

Figure 14.6 *Linked sign-in accounts*

> **NOTE** If your institution requires single sign-on, unlinking your only account may stop you signing in. Ask your administrator first.

14.5 Notifications

Available to: SuperAdmin, Admin, Faculty, Student, Finance

The notification inbox collects messages from the portal, such as new announcements, published results, new assignments and quizzes, live classes being scheduled or moved, graduation decisions and replies to your helpdesk tickets. Each shows when it was sent and its type. A green dot on the **Notifications** button means you have unread items.

Click **Mark read** on a notification, or **Mark All Read** to clear the indicator.

At the top, **Notifications on this device** turns on notifications for the phone or computer you are using and lets you choose which kinds you receive there (see Chapter 3).

© 2026 Tabsan Nexora. All rights reserved.

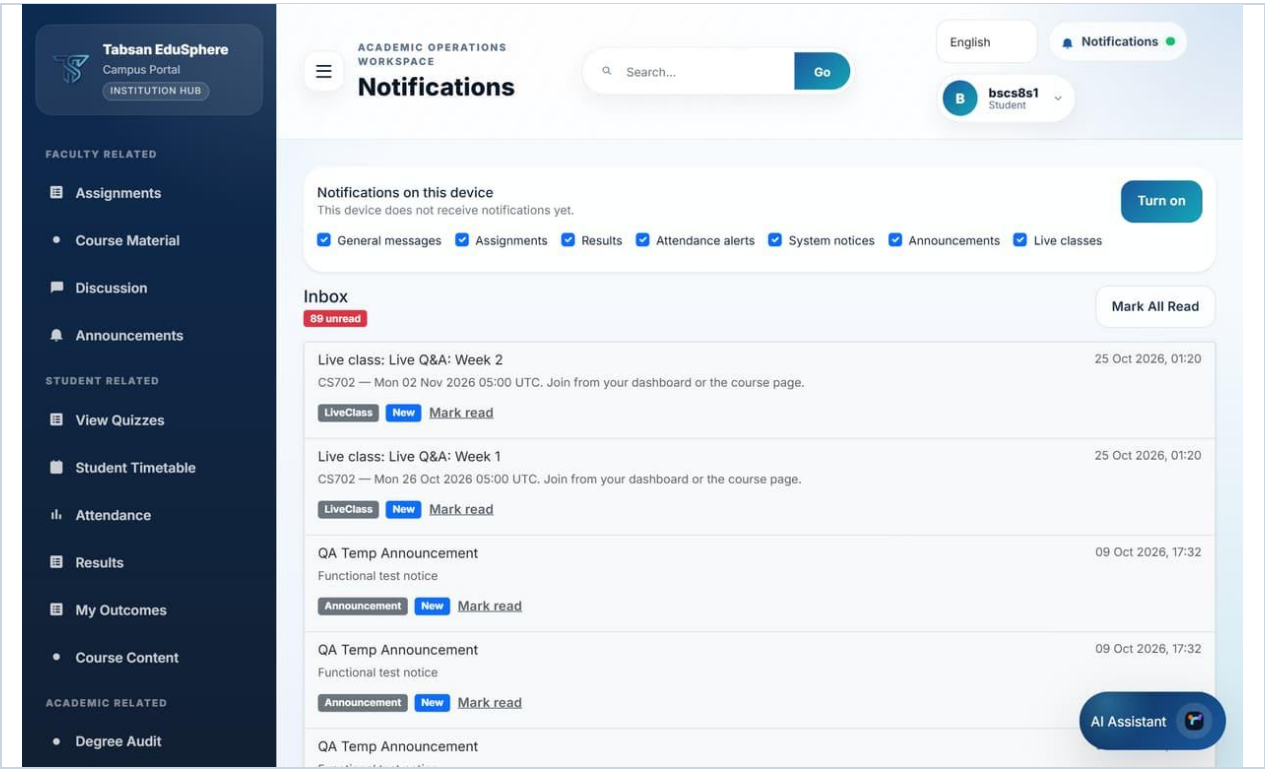

Figure 14.7 *Notifications: this device and the inbox*

14.6 API Tokens

Available to: SuperAdmin, Admin

Other systems, such as a student information system, a reporting tool or a script, can call the EduSphere REST API with a personal access token. A token acts as you, with your role and access, so give each integration its own token.

Procedure

1. Open **API Tokens**.
2. Under **New token**, enter a **Name** (for example "Nightly SIS sync"), how many days it is **Valid for** (up to 365) and whether it is **Read only**, and click **Create token**.
3. Copy the token straight away and store it in the other system. It is shown only once; EduSphere keeps only a fingerprint of it.
4. Click **Revoke** when a token is no longer used, or if it may have been seen by someone else.

© 2026 Tabsan Nexora. All rights reserved.

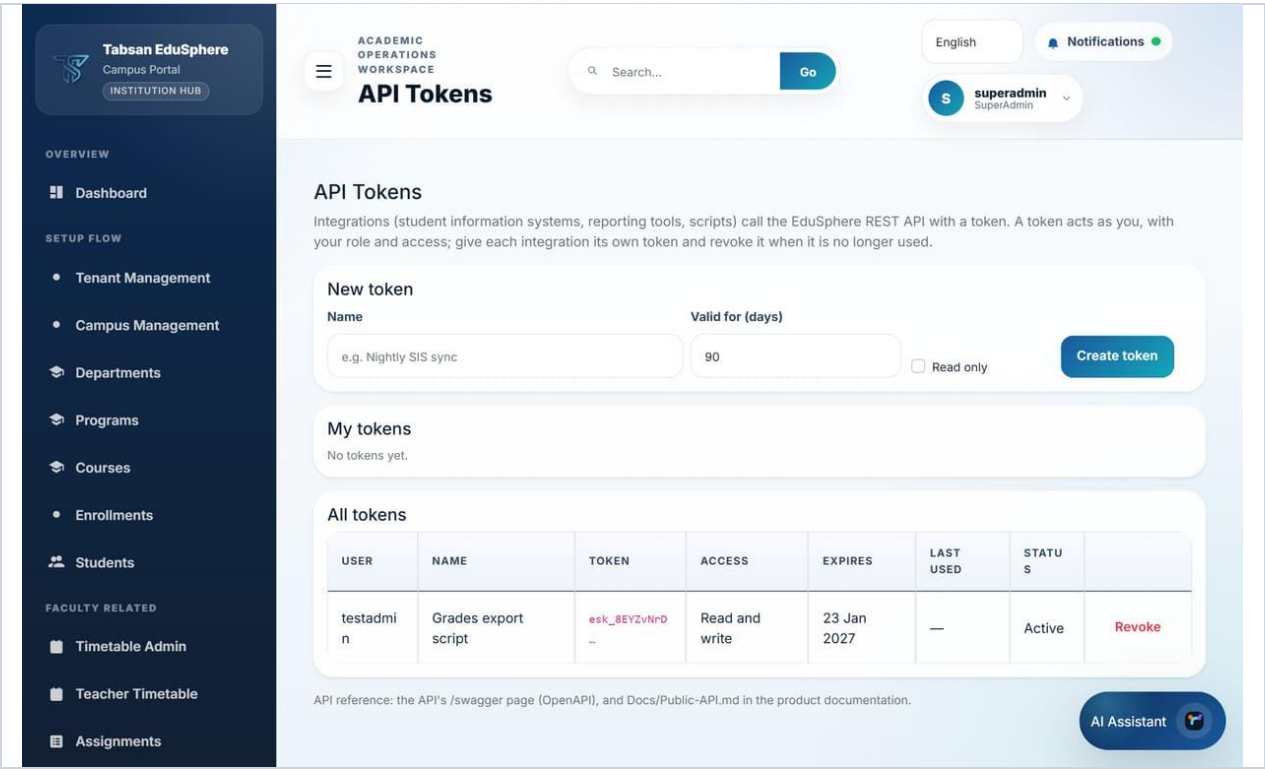

Figure 14.8 *API Tokens: your tokens and, for administrators, everyone's*

Good to know

- Administrators see every user's tokens under **All tokens** and can revoke any of them.
- Developers find the API reference on the API's /swagger page and in Docs/Public-API.md.

14.7 Helpdesk

Available to: SuperAdmin, Admin, Faculty, Student, Finance

Helpdesk is the place to ask the institution for help, for example about a timetable clash, a missing mark or a sign-in problem. Each request is a ticket that staff answer and track until it is resolved. All messages in a ticket are kept together.

Procedure

1. Open **Helpdesk**. Use the status tabs (All, Open, InProgress, Resolved, Closed) to filter your tickets.
2. Click **New Ticket**.
3. Choose the **Department** (optional) and **Category**, enter a short **Subject** and the **Details**, and click **Submit Ticket**.
4. Open a ticket with **View** to read replies and respond.

Fields and options

Field	What to enter or choose
Category	Academic (courses, marks, timetables), Technical (sign-in or portal problems) or Administrative (fees, documents, records).

© 2026 Tabsan Nexora. All rights reserved.

Field	What to enter or choose
Subject	A one-line summary, for example "CS201 midterm mark missing".
Details	Include what you were doing, what you expected and what happened. Screenshots help.

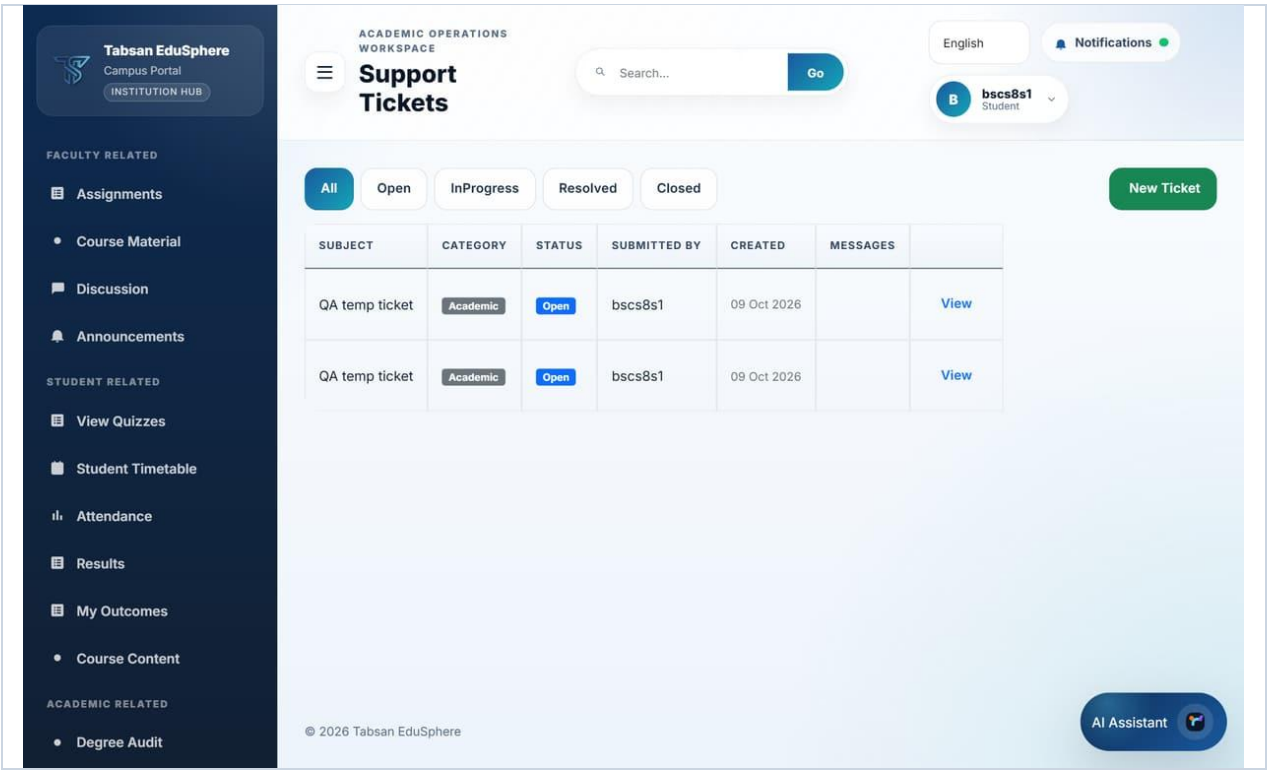

Figure 14.9 *Helpdesk ticket queue*

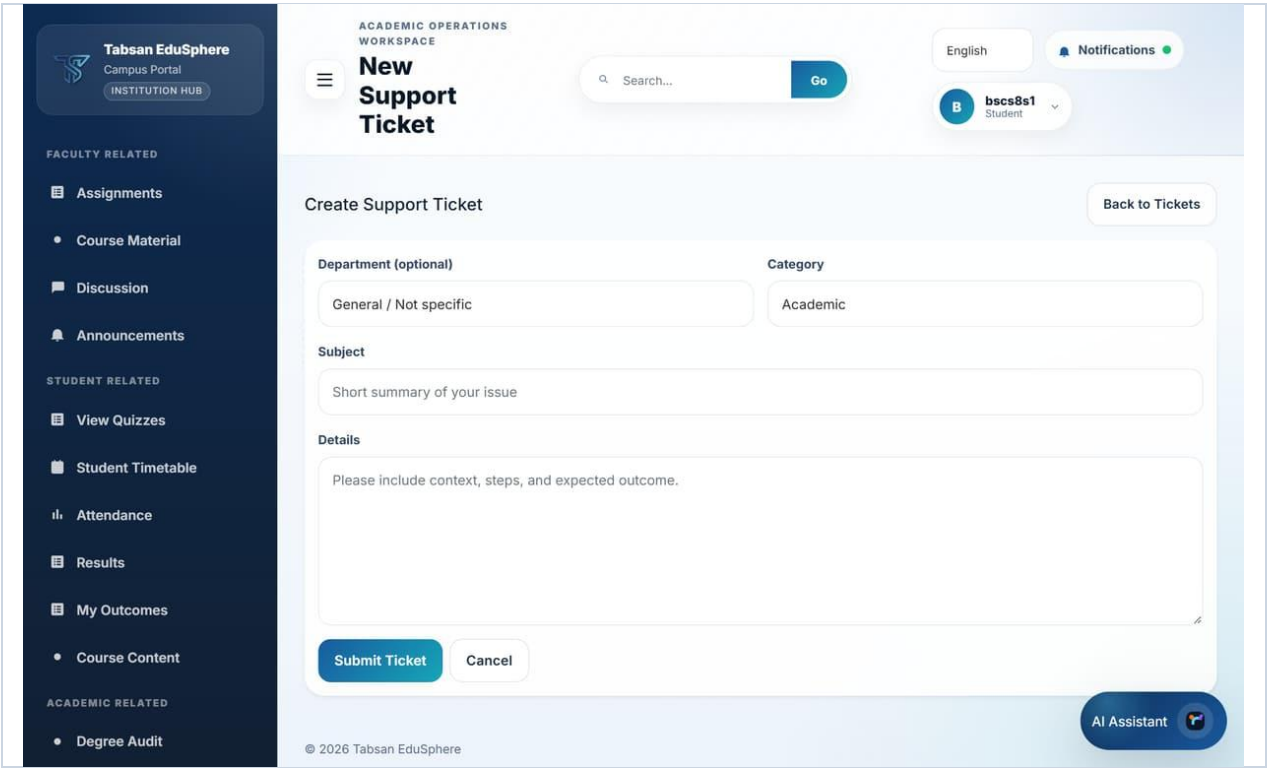

Figure 14.10 *New Support Ticket form*

© 2026 Tabsan Nexora. All rights reserved.

Ticket statuses

Status	Meaning
Open	New; waiting for staff.
In Progress	A staff member is working on it.
Resolved	Staff believe the issue is fixed. Reply if it is not.
Closed	Finished. Open a new ticket for a new issue.

14.8 Theme Settings

Available to: SuperAdmin, Admin, Faculty, Student, Finance

Theme Settings changes the colours of the portal for your own account, for example a dark theme for evening use. Click a theme to preview it on the page, then click **Save Theme**. **Reset Preview** returns to your saved theme, and you can go back to **Default** at any time.

Every theme keeps text readable. The dark themes (Midnight Dark, Deep Navy, Graphite Pro and Slate Grey) switch pages, tables, forms, menus and pop-ups to dark backgrounds with light text, and the coloured themes keep dark text on light backgrounds.

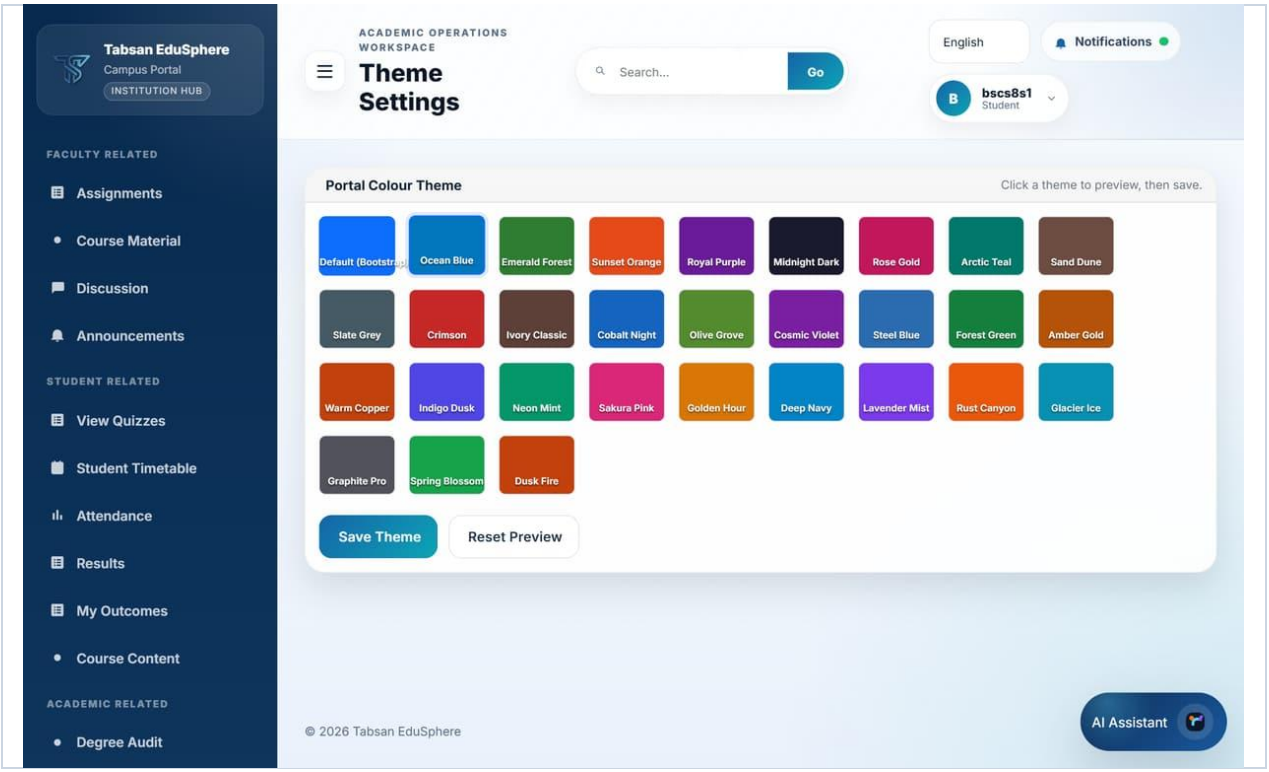

Figure 14.11 *Theme Settings with the Ocean Blue theme previewed*

© 2026 Tabsan Nexora. All rights reserved.

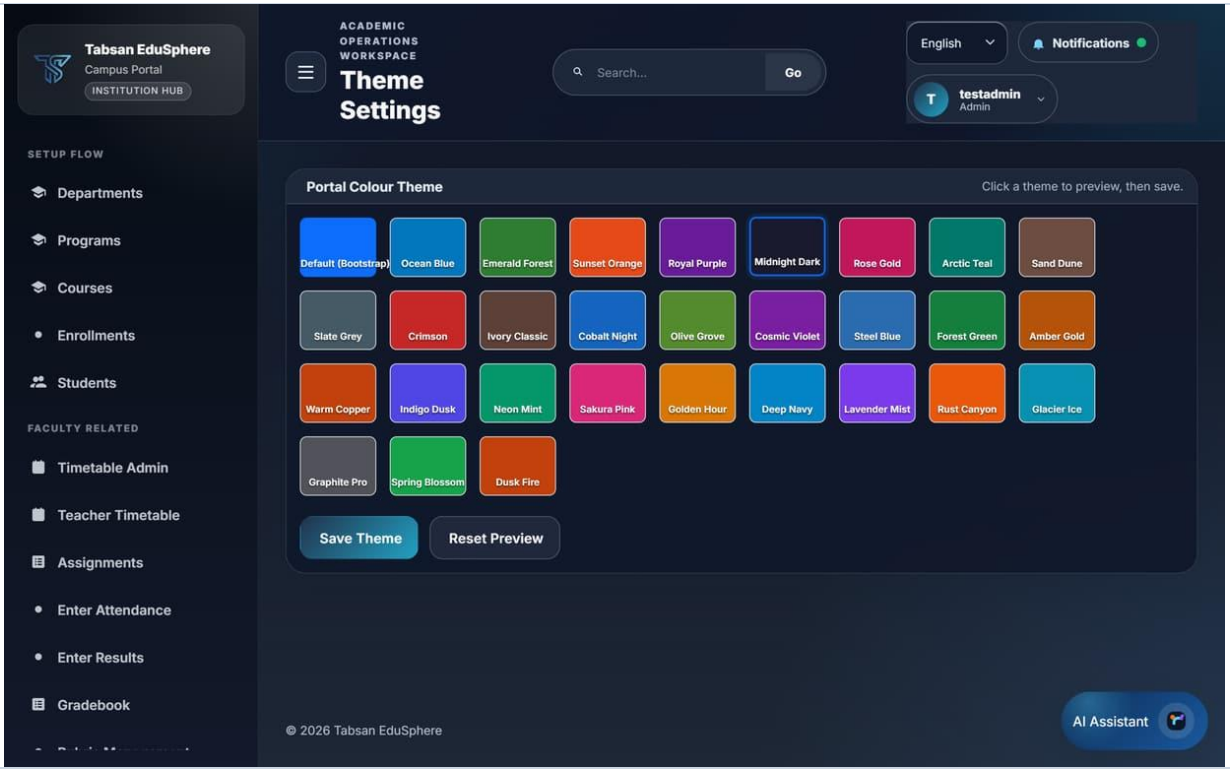

Figure 14.12 *Theme Settings with the Midnight Dark theme previewed*

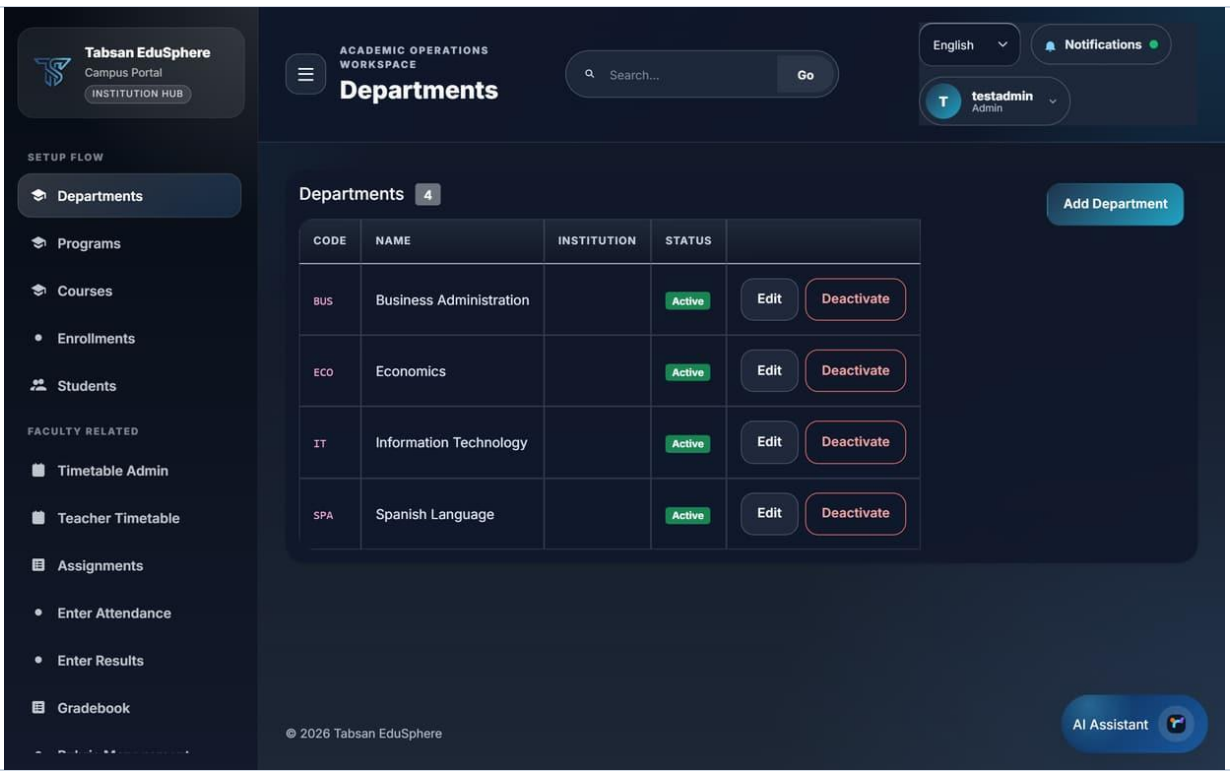

Figure 14.13 *The Departments page in the Midnight Dark theme*

© 2026 Tabsan Nexora. All rights reserved.

15 SuperAdmin Administration

The pages in this chapter are available only to SuperAdmin users. They control the whole installation, so changes here affect every user.

15.1 Dashboard

Available to: SuperAdmin

The SuperAdmin Dashboard explains the workspace modes and holds the API connection settings (API Base URL, access token and default department). These settings connect the portal to its back-end service. Change them only on instruction from your technical team.

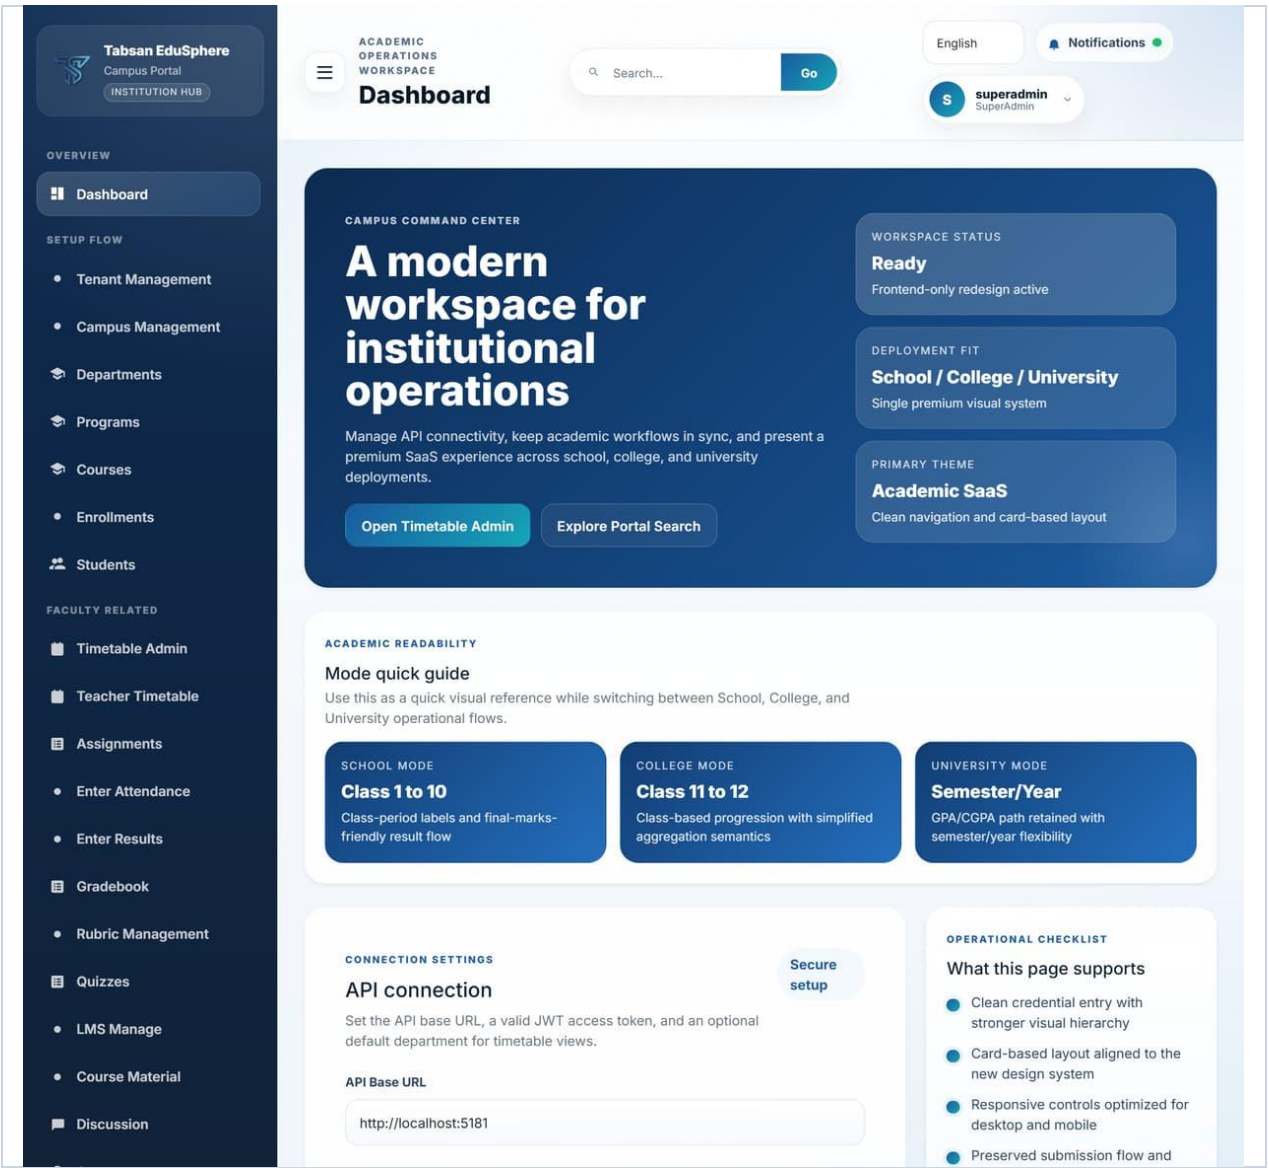

Figure 15.1 *SuperAdmin Dashboard*

15.2 Tenant and Campus Management

Available to: SuperAdmin

© 2026 Tabsan Nexora. All rights reserved.

A tenant is a separate institution in the installation, for example the University, the College and the School, each with its own users and data. Each tenant has one or more campuses.

Procedure

1. In **Tenant Management**, enter a **Code** and **Name** and click **Create Tenant**.
2. Click **Manage Campuses**, choose the tenant, enter the campus **Code** and **Name**, and click **Create**.
3. Use **Save** to rename, and **Deactivate** for tenants or campuses no longer in use. Deactivated items are hidden from all filters.

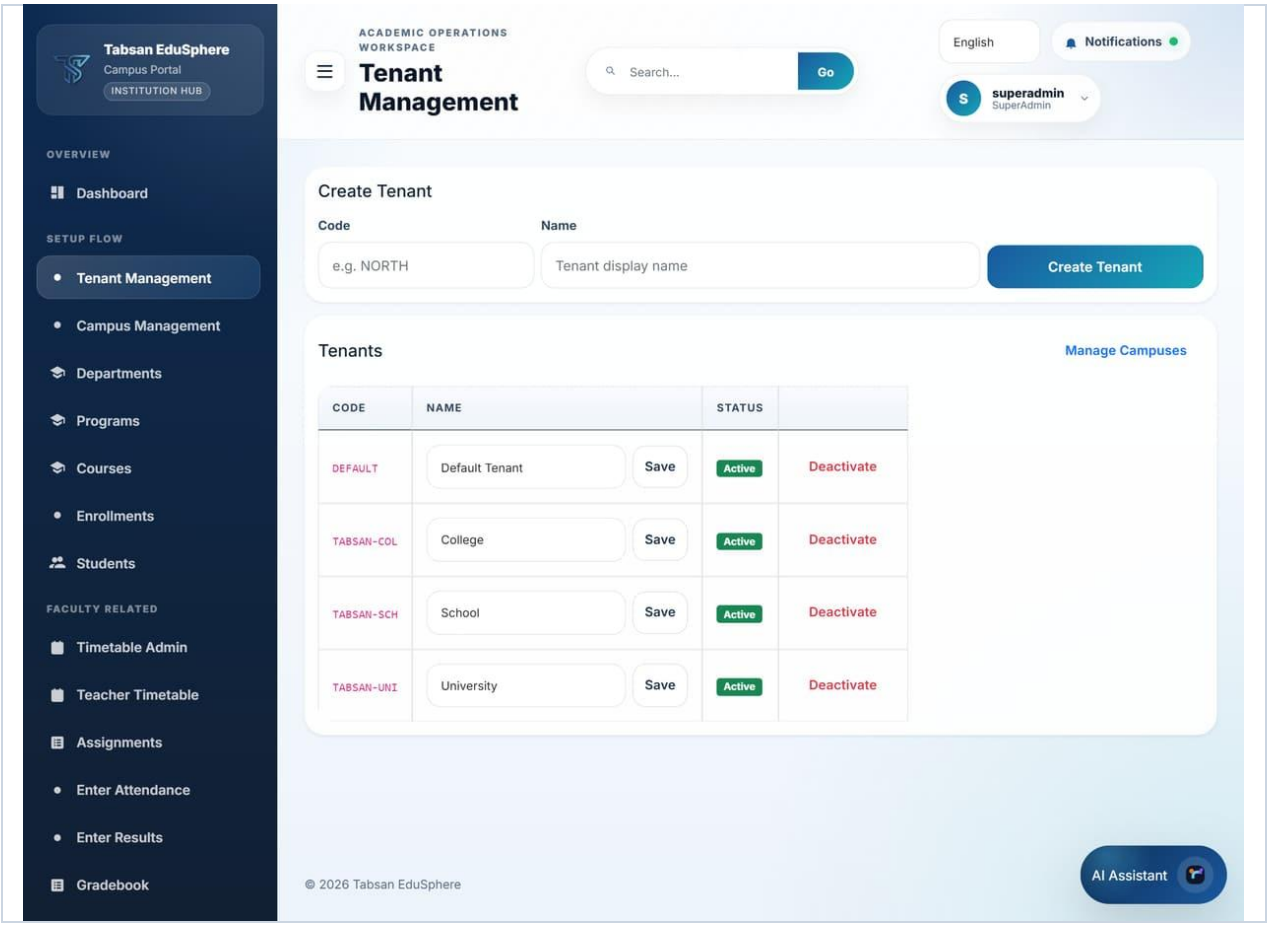

Figure 15.2 *Tenant Management*

© 2026 Tabsan Nexora. All rights reserved.

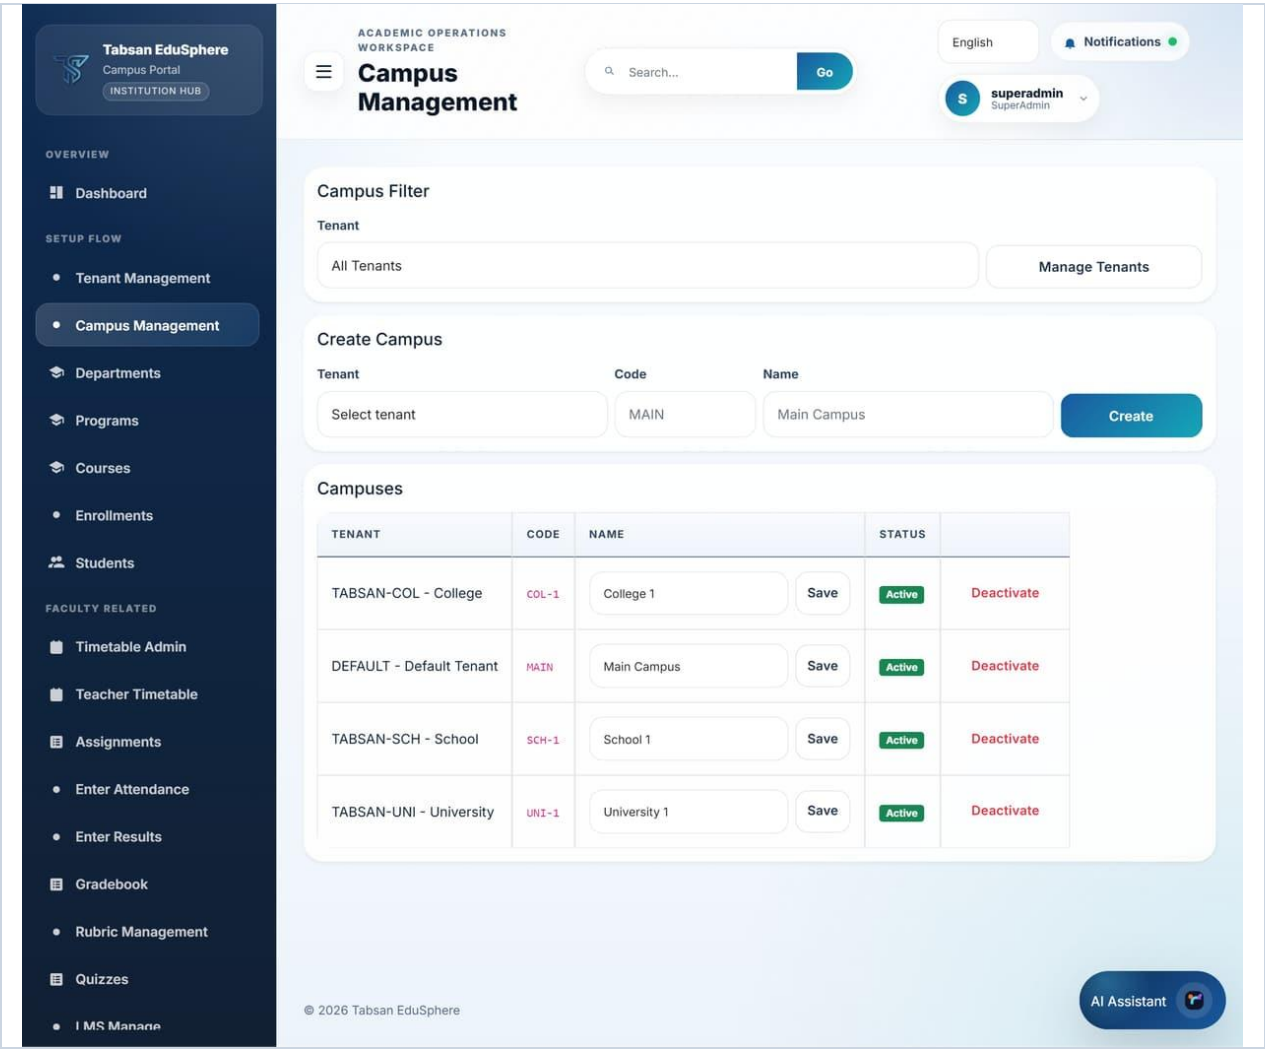

Figure 15.3 *Campus Management*

15.3 Admin Users

Available to: SuperAdmin

Admin Users creates Admin accounts and decides which departments each Admin manages. An Admin sees and manages only the departments assigned to them.

Procedure

1. Enter the **Username**, **Email** and a **Temporary Password**, and optionally an **Institution Type**.
2. Tick the **Initial Department Assignments** (use **Select All** or **Clear** to speed this up) and click **Create Admin**.
3. To change an existing Admin, search for and select them, update their details and department assignments, and click **Save Changes**.

© 2026 Tabsan Nexora. All rights reserved.

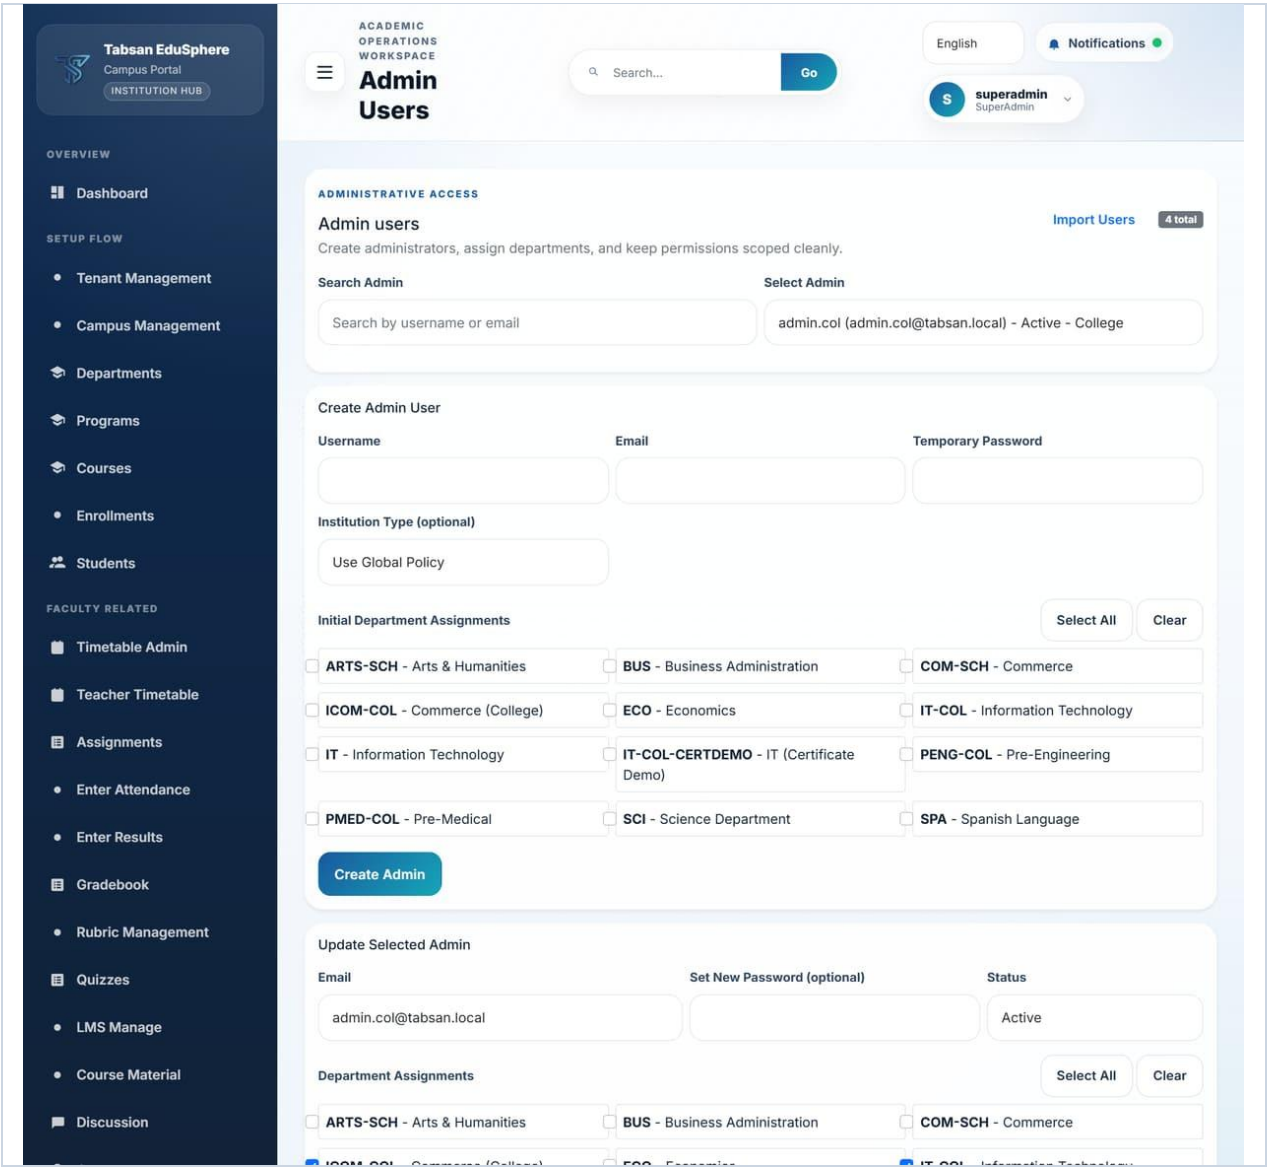

Figure 15.4 *Admin Users*

15.4 Module Composition

Available to: SuperAdmin

Module Composition shows the module registry (22 modules, such as Attendance, Results, Reports, FYP, Single Sign-On, Learning Outcomes & Mastery, Live Classes and Similarity Checking), whether each is active, whether your role can use it, and the dashboard widgets for your role. Deactivate a module to hide its features for everyone. Modules allowed by the license are activated automatically when the license is uploaded.

© 2026 Tabsan Nexora. All rights reserved.

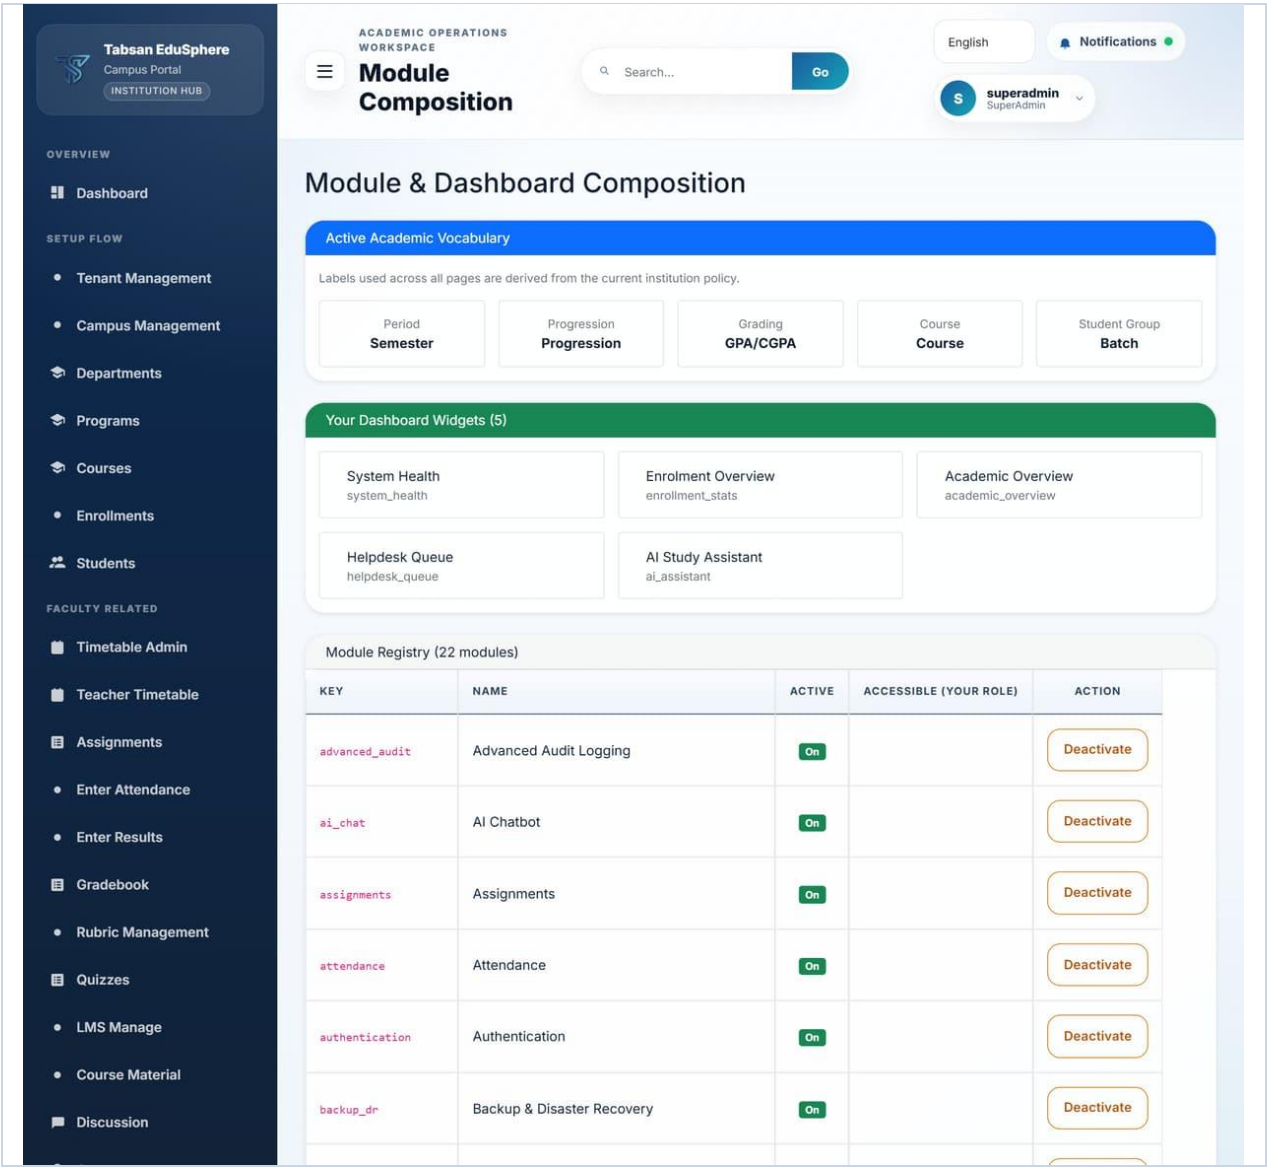

Figure 15.5 *Module Composition*

15.5 Sidebar Settings

Available to: SuperAdmin

Sidebar Settings controls which menu items Admin, Faculty and Student users see. Each row is a menu with its purpose and a switch for each role. SuperAdmin always keeps full access, and menus marked System cannot be switched off. Appendix A shows the default settings.

© 2026 Tabsan Nexora. All rights reserved.

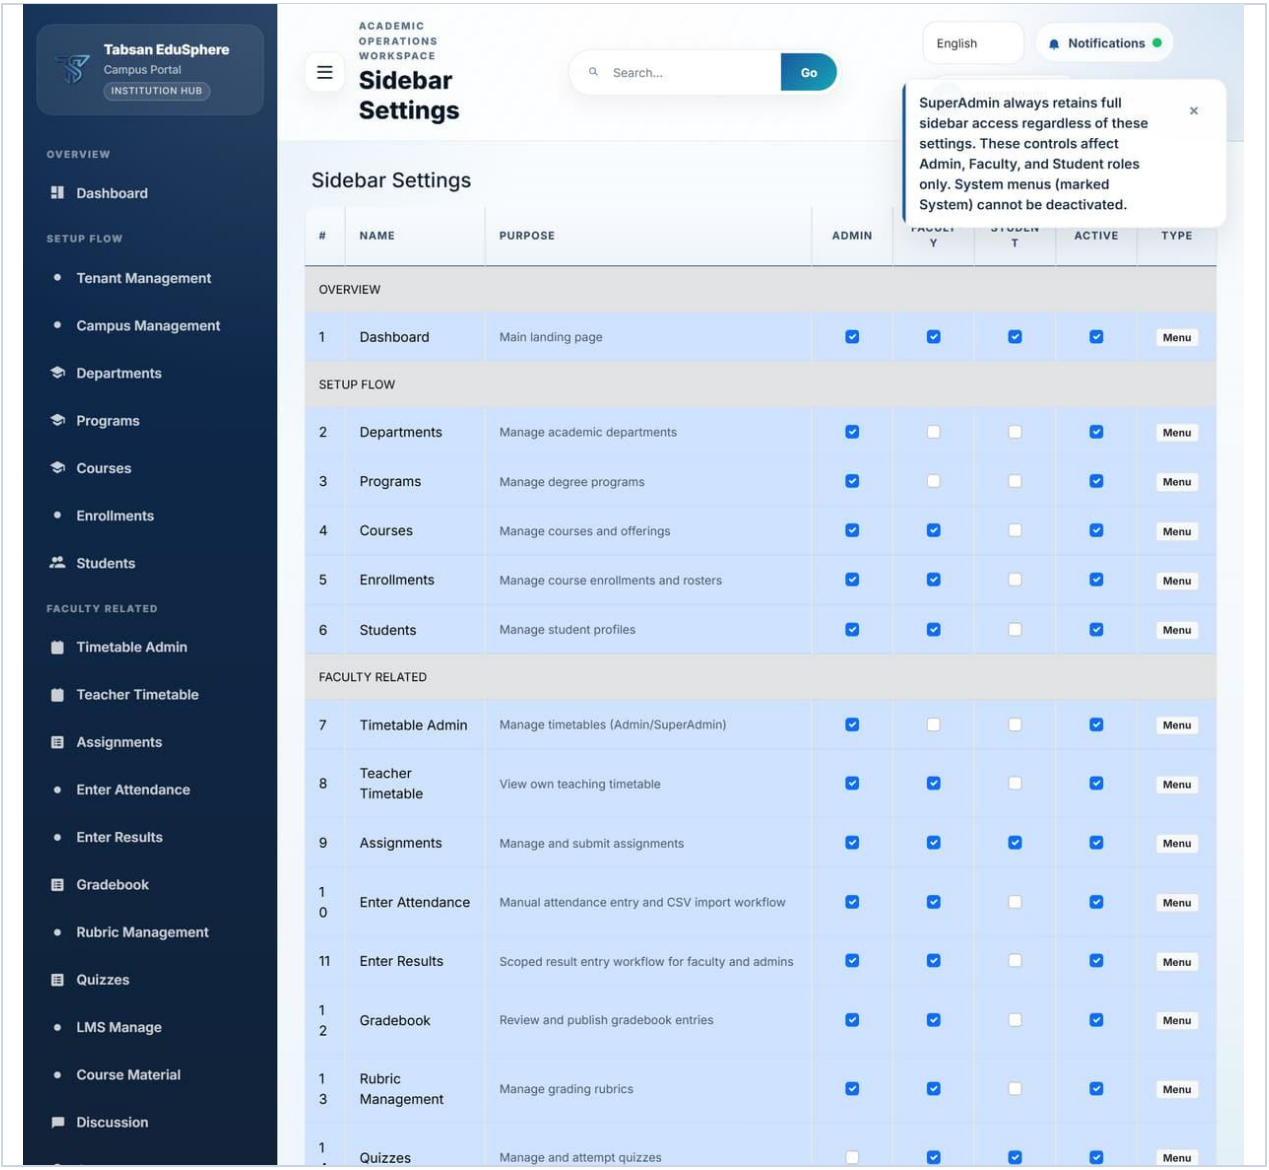

Figure 15.6 *Sidebar Settings*

15.6 Report Settings

Available to: SuperAdmin

Report Settings lists the report definitions (nine by default). Here you can create a new definition, switch a report on or off, and choose which roles may run it. Report Center then shows each user only the reports allowed for their role.

© 2026 Tabsan Nexora. All rights reserved.

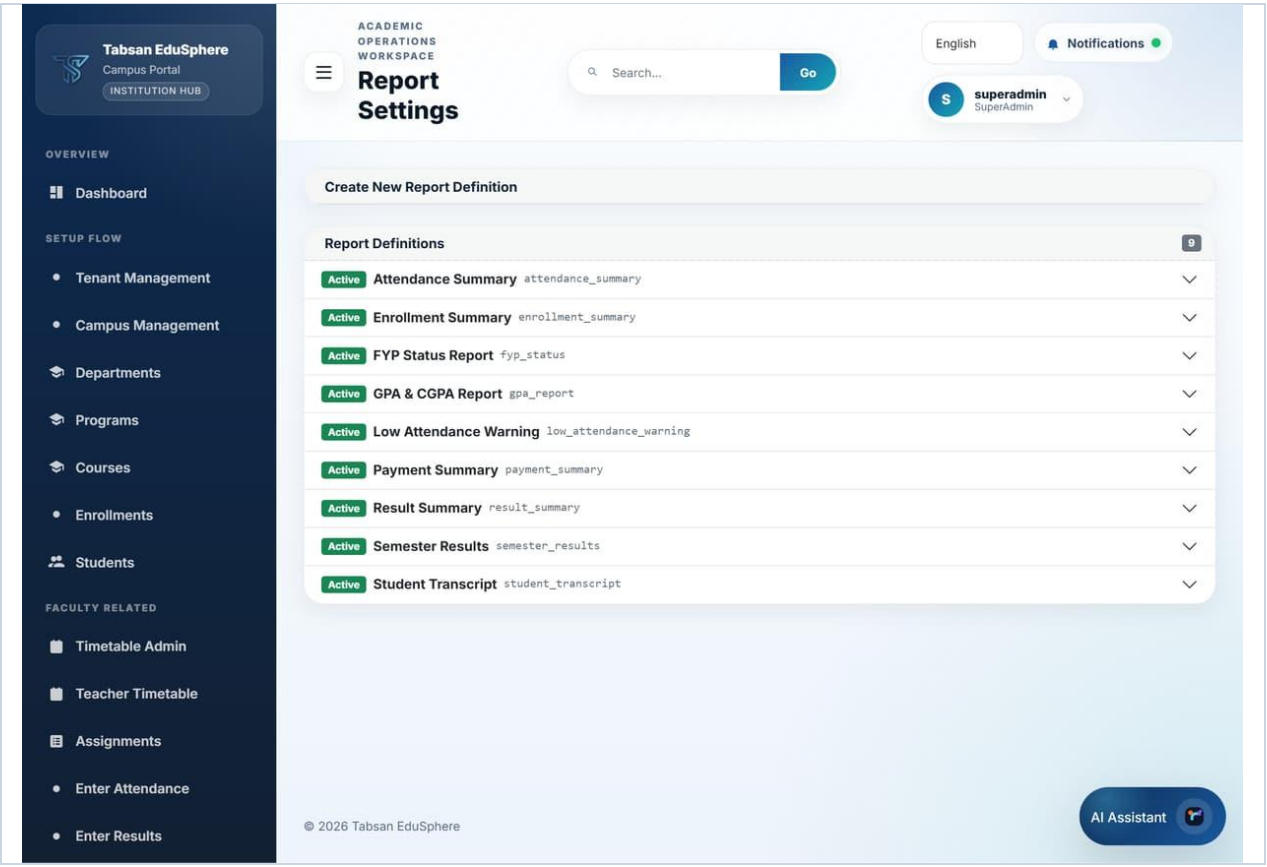

Figure 15.7 *Report Settings*

15.7 Dashboard Settings (Branding)

Available to: SuperAdmin

Dashboard Settings controls how the portal presents your institution.

Procedure

1. Update the fields you want to change.
2. Click **Save Branding**. The changes apply to all users at their next page load.

Fields and options

Field	What to enter or choose
University / Institution Name	Shown in the sidebar and on generated documents.
Portal Subtitle	The line under the name, for example "Campus Portal".
Footer Text	Text shown at the bottom of every page.
Portal Logo	Upload your institution's logo (shown in the sidebar). If none is uploaded, the Tabsan emblem is used.
Privacy Policy URL / Text	A link to, or the text of, your privacy policy.
Font Family / Font Size	The portal's main font and base text size.

© 2026 Tabsan Nexora. All rights reserved.

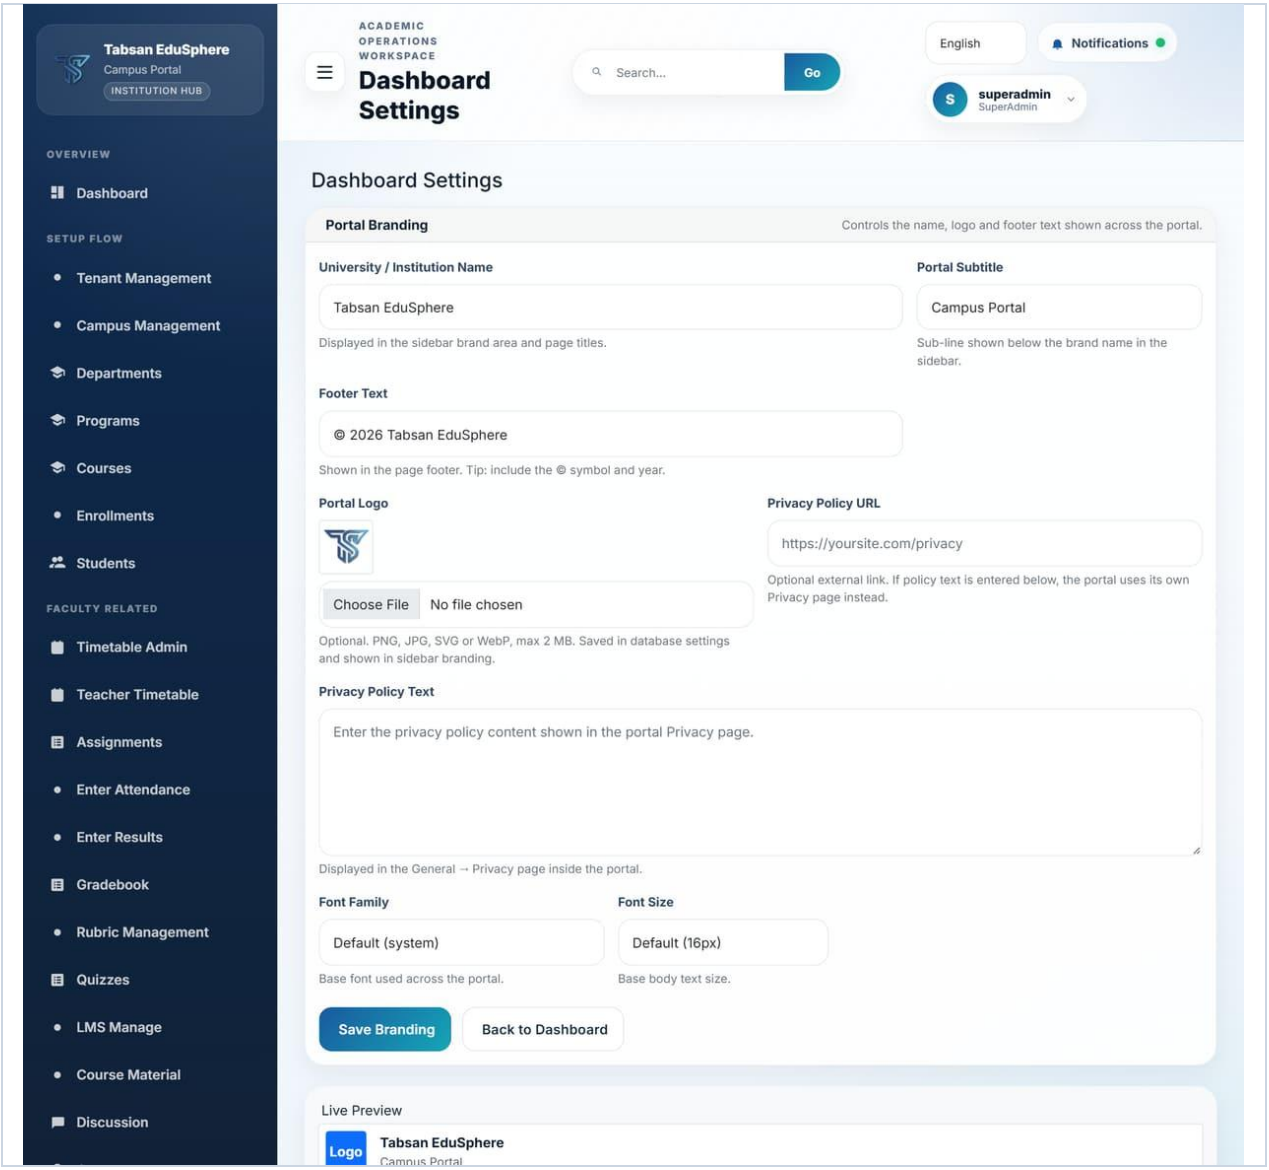

Figure 15.8 *Dashboard Settings – portal branding*

15.8 Institution Policy

Available to: SuperAdmin

Institution Policy switches the University, School and College institution types on or off for the installation, within what the license allows. Switching a type off hides its departments, menus and reports. Tick the types in use and click **Save Policy**.

© 2026 Tabsan Nexora. All rights reserved.

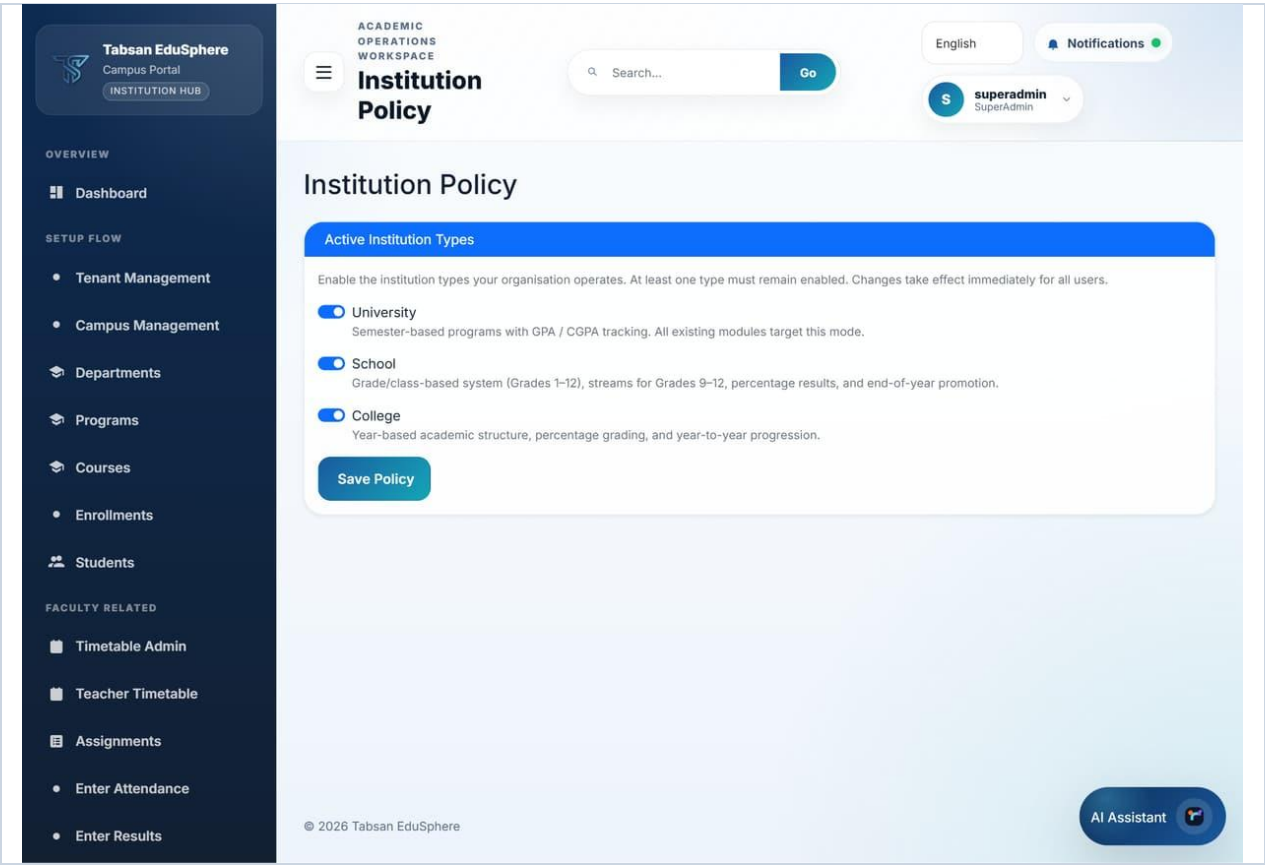

Figure 15.9 *Institution Policy*

15.9 License Update

Available to: SuperAdmin

License Update shows the current product license (status, type, activation date and expiry date) and lets you upload a new or renewed license file supplied by Tabsan.

Procedure

1. Open **License Update**.
2. Under **Upload License File**, choose the .tablic file supplied by Tabsan.
3. Click **Upload & Activate**. The Current License table updates and the license status shows Active.

© 2026 Tabsan Nexora. All rights reserved.

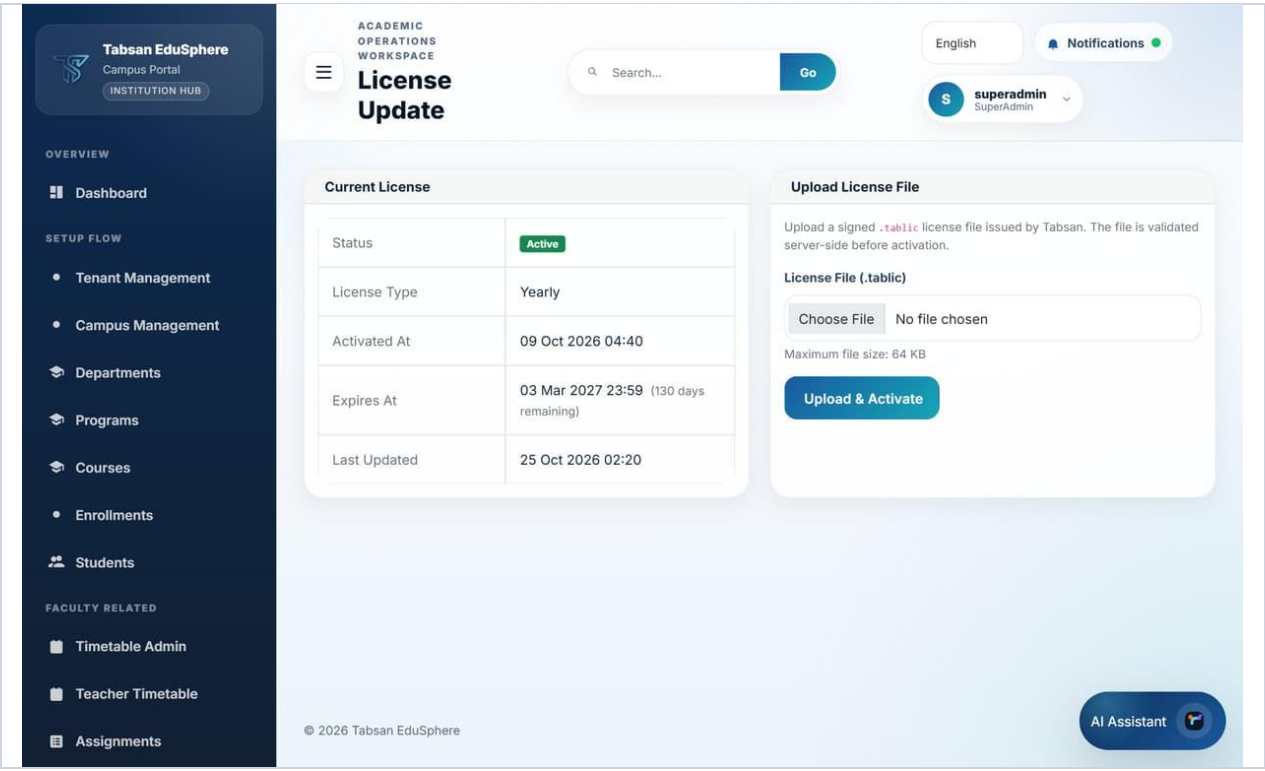

Figure 15.10 *License Update*

License statuses

Status	Meaning
Active	The license is valid; the portal works normally.
Expired	The expiry date has passed; the portal is read-only until a new license is uploaded.
Invalid	No license, or the stored license failed its security checks; the portal is read-only.

> **IMPORTANT** License files are encrypted and digitally signed. A file that has been edited in any way is rejected. The expiry date is fixed inside the file and is the same on every server it is activated on. Each license file can be activated only once.

15.10 Library Config

Available to: SuperAdmin

Library Config connects the portal to an external library system so users can search the catalogue and see loans. Enter the **Catalogue URL**, **Loan API URL** and **API Token** supplied by the library system, then click **Save Configuration**.

© 2026 Tabsan Nexora. All rights reserved.

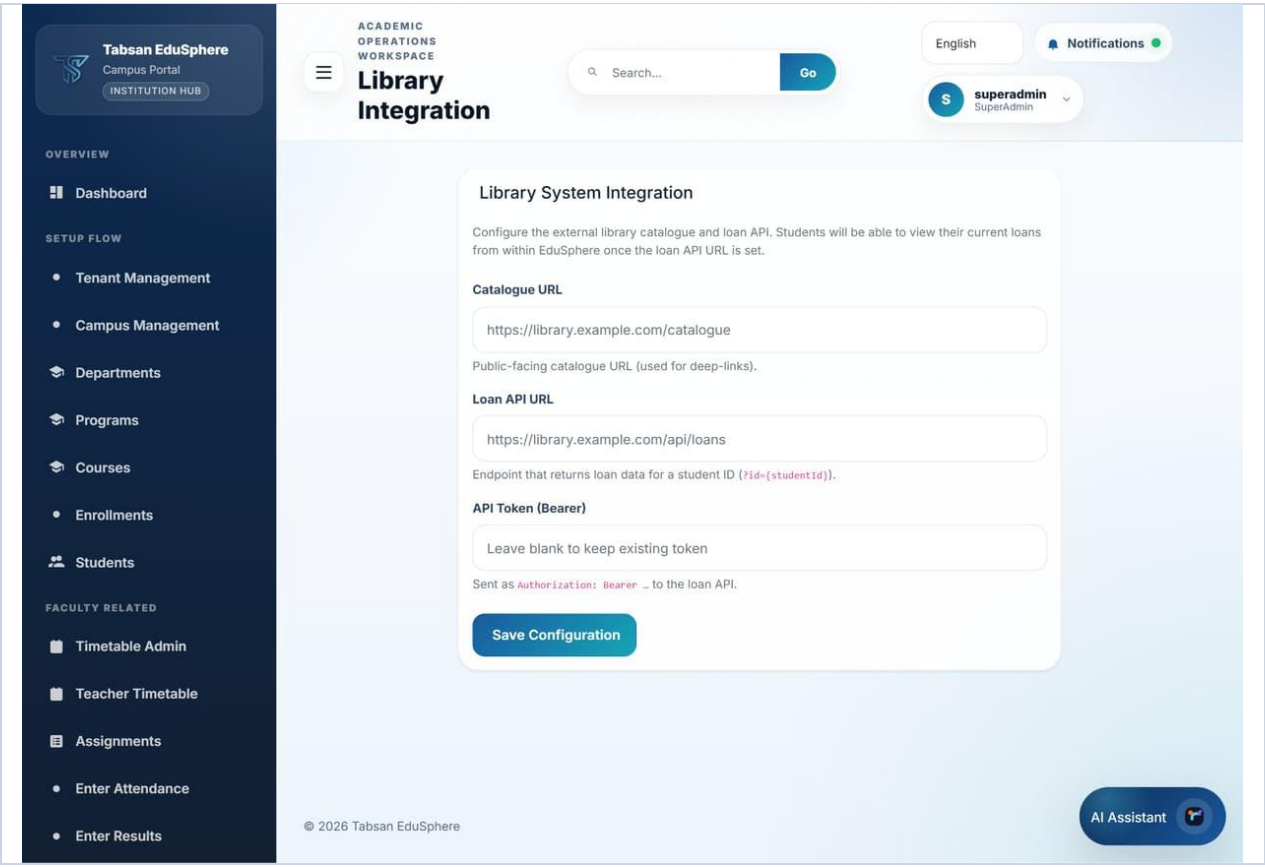

Figure 15.11 *Library Config*

15.11 Accreditation

Available to: SuperAdmin

Accreditation helps prepare documents for accreditation bodies. Download the simple template, complete it with your institution's information, and upload it back to keep it with your records.

© 2026 Tabsan Nexora. All rights reserved.

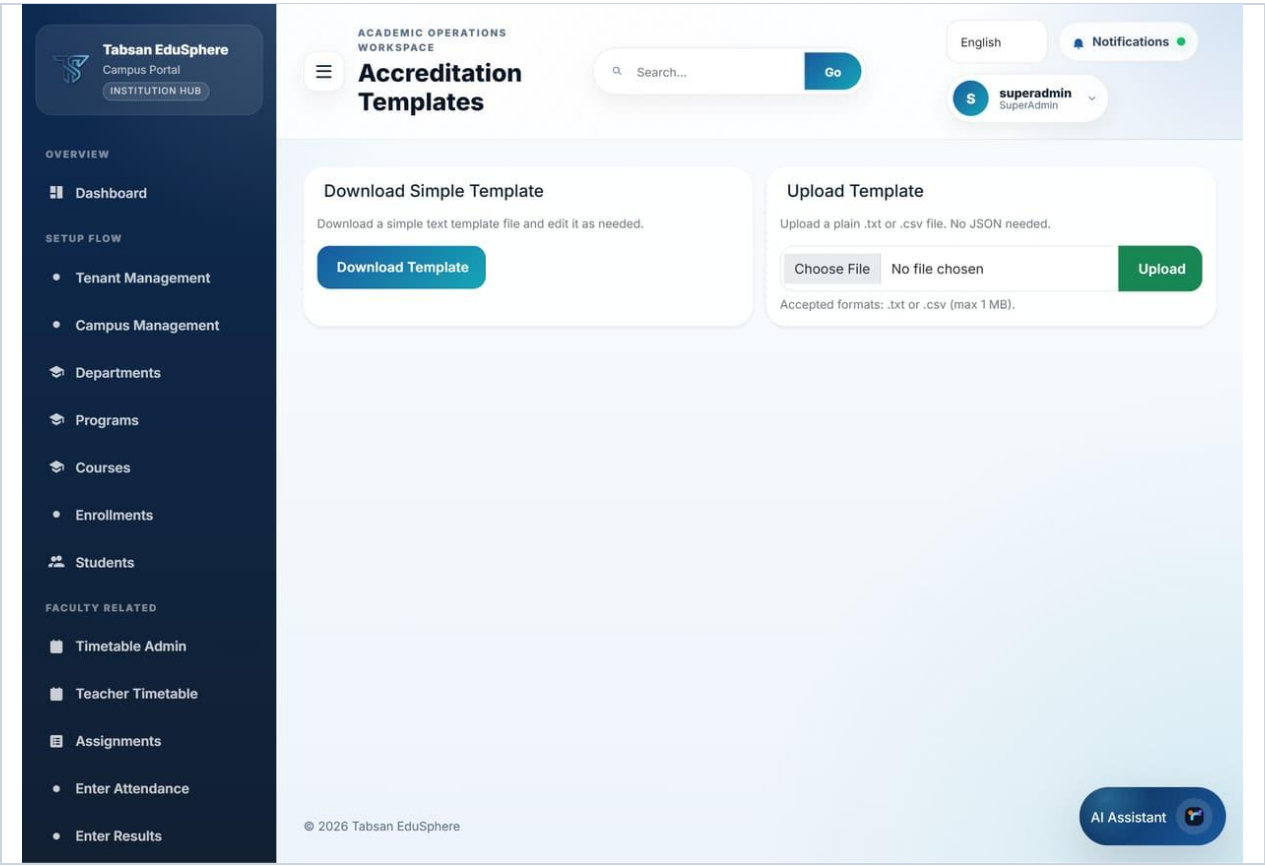

Figure 15.12 *Accreditation templates*

15.12 Advanced Audit

Available to: SuperAdmin

The audit log records who did what and when, including sign-ins, changes to records and settings, with the before and after values. Use it to investigate a problem or to answer compliance questions.

Procedure

1. Filter by any combination of **Search** text, **Actor User Id**, **Action**, **Module (Entity)** and a **From**/**To** date range (UTC), choose how many **Rows** to show, and click **Apply Filters**.
2. Use **Previous** and **Next** to page through the results. Your filters are kept.
3. Click **Export CSV**, **Export Excel** or **Export PDF** to download the filtered log.

© 2026 Tabsan Nexora. All rights reserved.

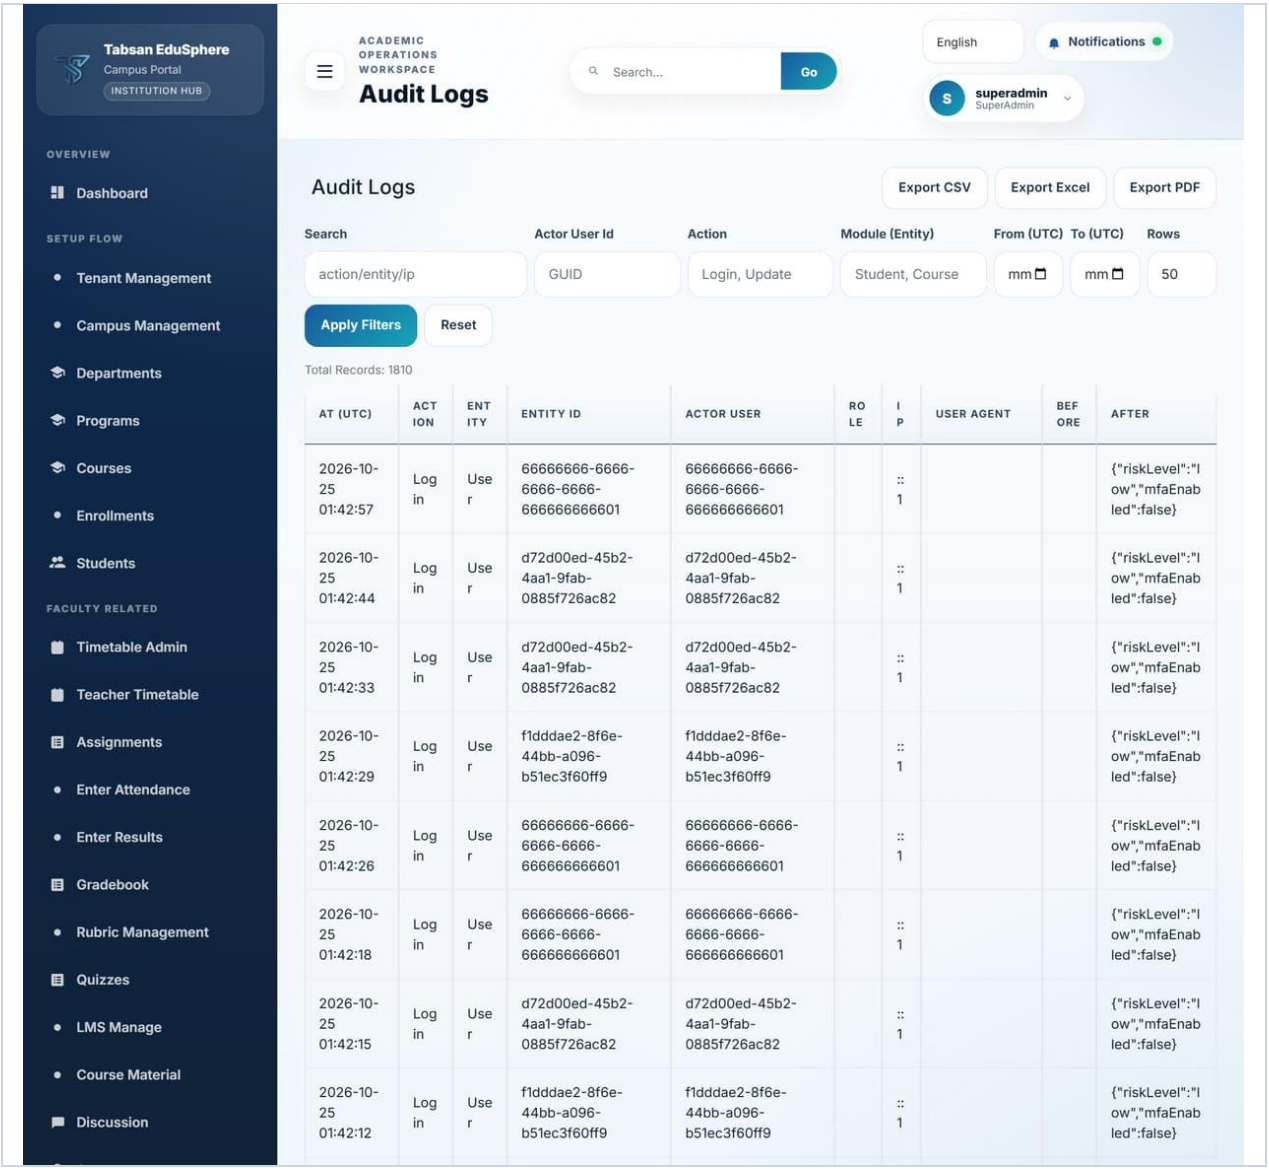

Figure 15.13 *Audit Logs*

© 2026 Tabsan Nexora. All rights reserved.

16 Integrations and Platform Settings

The pages in this chapter connect EduSphere to other systems and set platform-wide options. They are under **Settings Related** in the sidebar and are available to SuperAdmin by default; a SuperAdmin can give Admins access to some of them in Sidebar Settings. Most need the matching module to be licensed and active in Module Composition.

Secrets entered on these pages (client secrets, API keys, shared secrets) are stored encrypted and never shown again. Every change is recorded in the audit log.

16.1 Single Sign-On

Available to: SuperAdmin

Single Sign-On lets people sign in with their institution account through Microsoft Entra ID, Google Workspace, any other OpenID Connect identity provider, or a SAML 2.0 identity provider (for example ADFS, Shibboleth, Okta or Keycloak). Users are matched to existing EduSphere accounts; no new accounts are created.

Providers can be installation-wide (shown on the normal sign-in page) or for one tenant (shown on the sign-in address ending in ?tenant= and the tenant code). Use **Tenant code** and **Switch** at the top of the page to choose which one you are configuring.

Before you start

- Register EduSphere at the identity provider with the values shown under **Values to register at your identity provider**: the OpenID Connect redirect URI, or for SAML the entity ID (audience), the ACS URL and the SP metadata (**Download SP metadata**).
- Note the client ID and client secret (OpenID Connect) or the IdP metadata URL (SAML).

Procedure

1. Open **Single Sign-On** and expand the provider: **Microsoft Entra ID**, **Google Workspace**, **Other OpenID Connect IdP** or **SAML 2.0 IdP**.
2. Enter the **Button label**, then for OpenID Connect the **Client ID**, the client secret and the authority (issuer) address, or for SAML the **IdP metadata URL**.
3. Choose how first-time sign-ins are linked: by **verified email**, and/or by **institution ID** (the claim or attribute carrying a student's registration number or a staff member's username).
4. Optionally enter the claim or attribute carrying roles or affiliation and the **role mappings** (for example student=Student; faculty=Faculty; staff=Admin|Finance), and tick **Refuse sign-in when the identity provider's role does not match**.
5. For SAML, optionally tick **Sign authentication requests** and **Require encrypted assertions** (then download the SP metadata again and update it at the identity provider).
6. Optionally limit the **allowed email domains**, trust the provider's multi-factor sign-in, or **Require single sign-on** (password sign-in off for that scope; SuperAdmins always keep password sign-in).

© 2026 Tabsan Nexora. All rights reserved.

7. Tick **Show this provider on the login page**, click **Save**, then **Test connection**. Finally, sign in once with a test account to confirm the details.

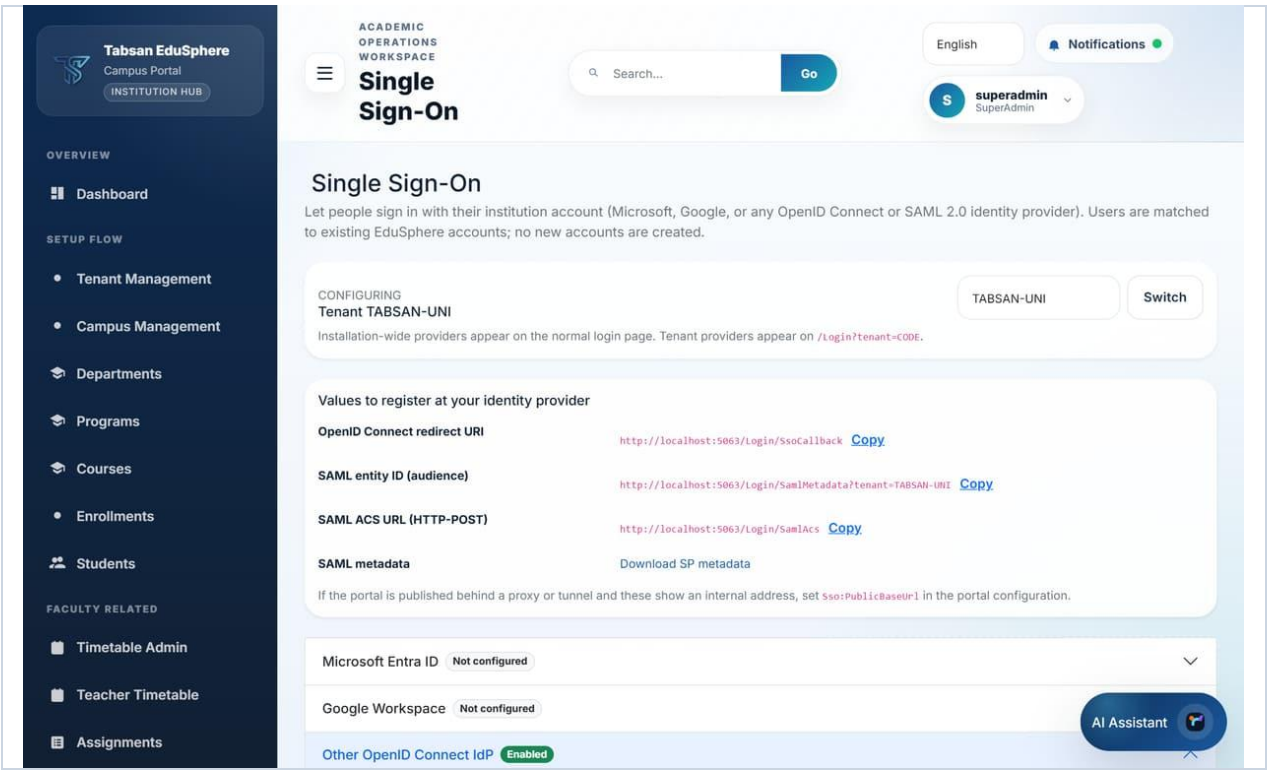

Figure 16.1 *Single Sign-On: values to register and the providers*

© 2026 Tabsan Nexora. All rights reserved.

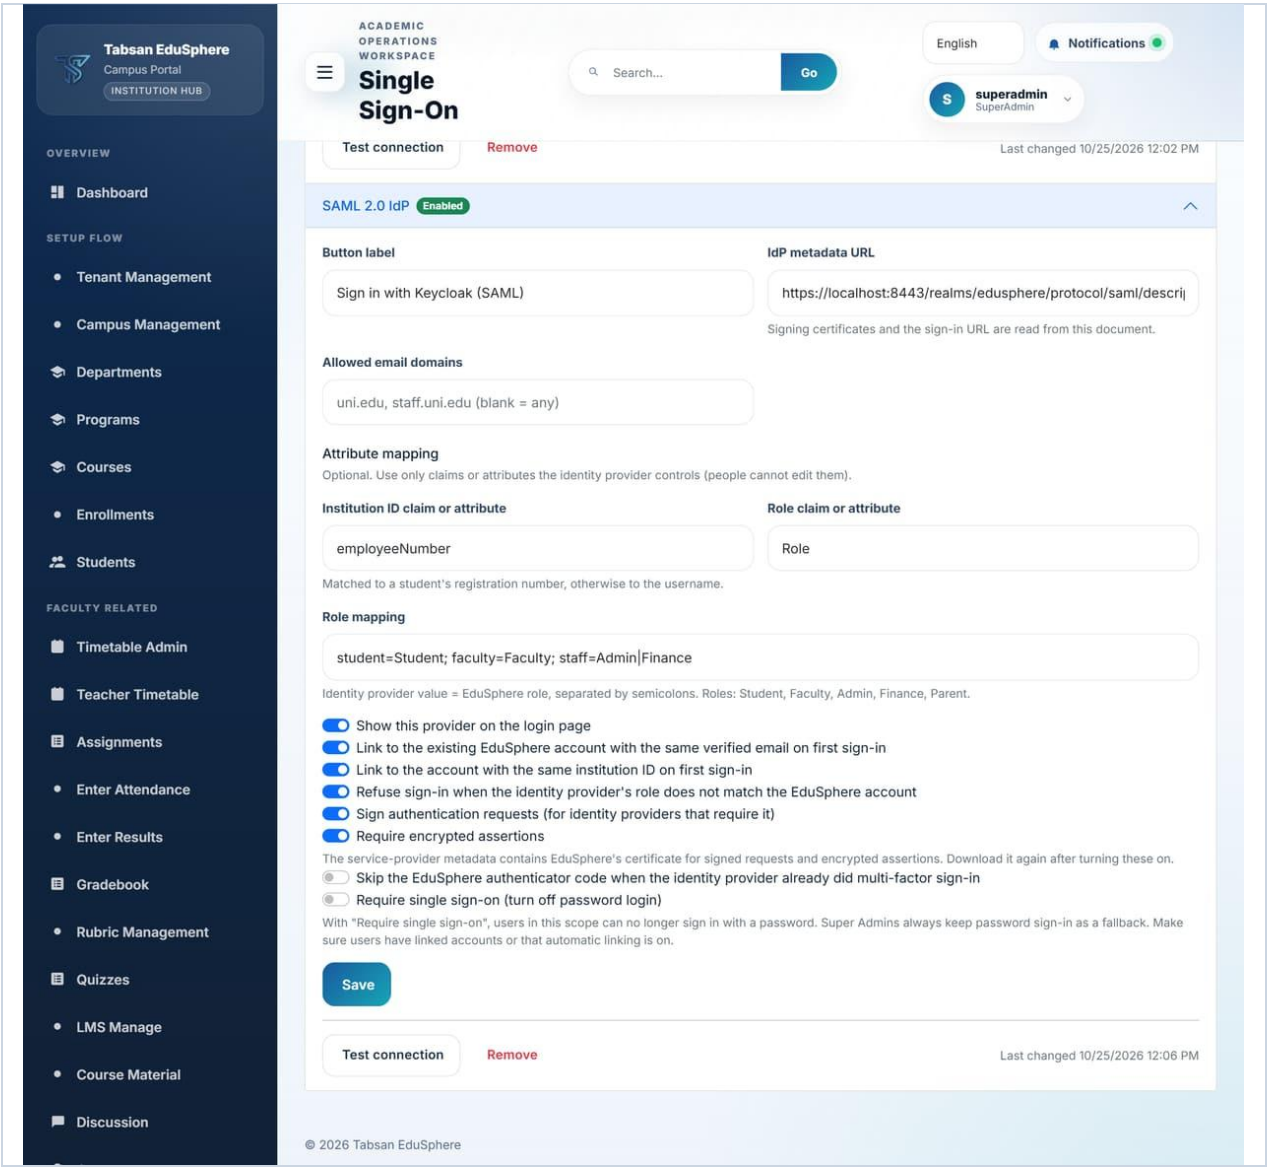

Figure 16.2 *A SAML 2.0 provider with attribute mapping, role check, signing and encryption*

What happens next

The sign-in page shows the provider's button (Chapter 3). Sign-ins, links and refusals are recorded in the audit log with the reason, which helps when a user reports a problem.

> **NOTE** The SSO Setup Guide in the User Guide folder has step-by-step instructions for each provider, a roll-out checklist and troubleshooting.

16.2 External Tools (LTI 1.3)

Available to: SuperAdmin (Admins when granted)

External Tools registers learning tools that support LTI 1.3 / LTI Advantage, so teachers can add them to courses (Chapter 7). Tools can receive the class list (Names and Role Provisioning) and send grades back (Assignment and Grade Services).

© 2026 Tabsan Nexora. All rights reserved.

Procedure

1. Open **External Tools**. The top of the page shows the values to give the tool vendor: issuer, client ID, deployment ID, the platform's keys (JWKS), authorization and token addresses.
2. If the tool offers a registration URL, paste it under **Register with the tool's registration URL** and click **Start registration**; the tool registers itself and starts switched off for your review.
3. Otherwise, under **Register a tool**, enter its name, login initiation URL, target link URI, redirect URIs, deep-linking URL and keys (JWKS URL or public key), and choose what personal data it may receive and whether it may use grades and the class list. Click **Save**.
4. Add **deployments** to limit a tool to a department or a course, and use **Turn on** / **Turn off** to make it available.

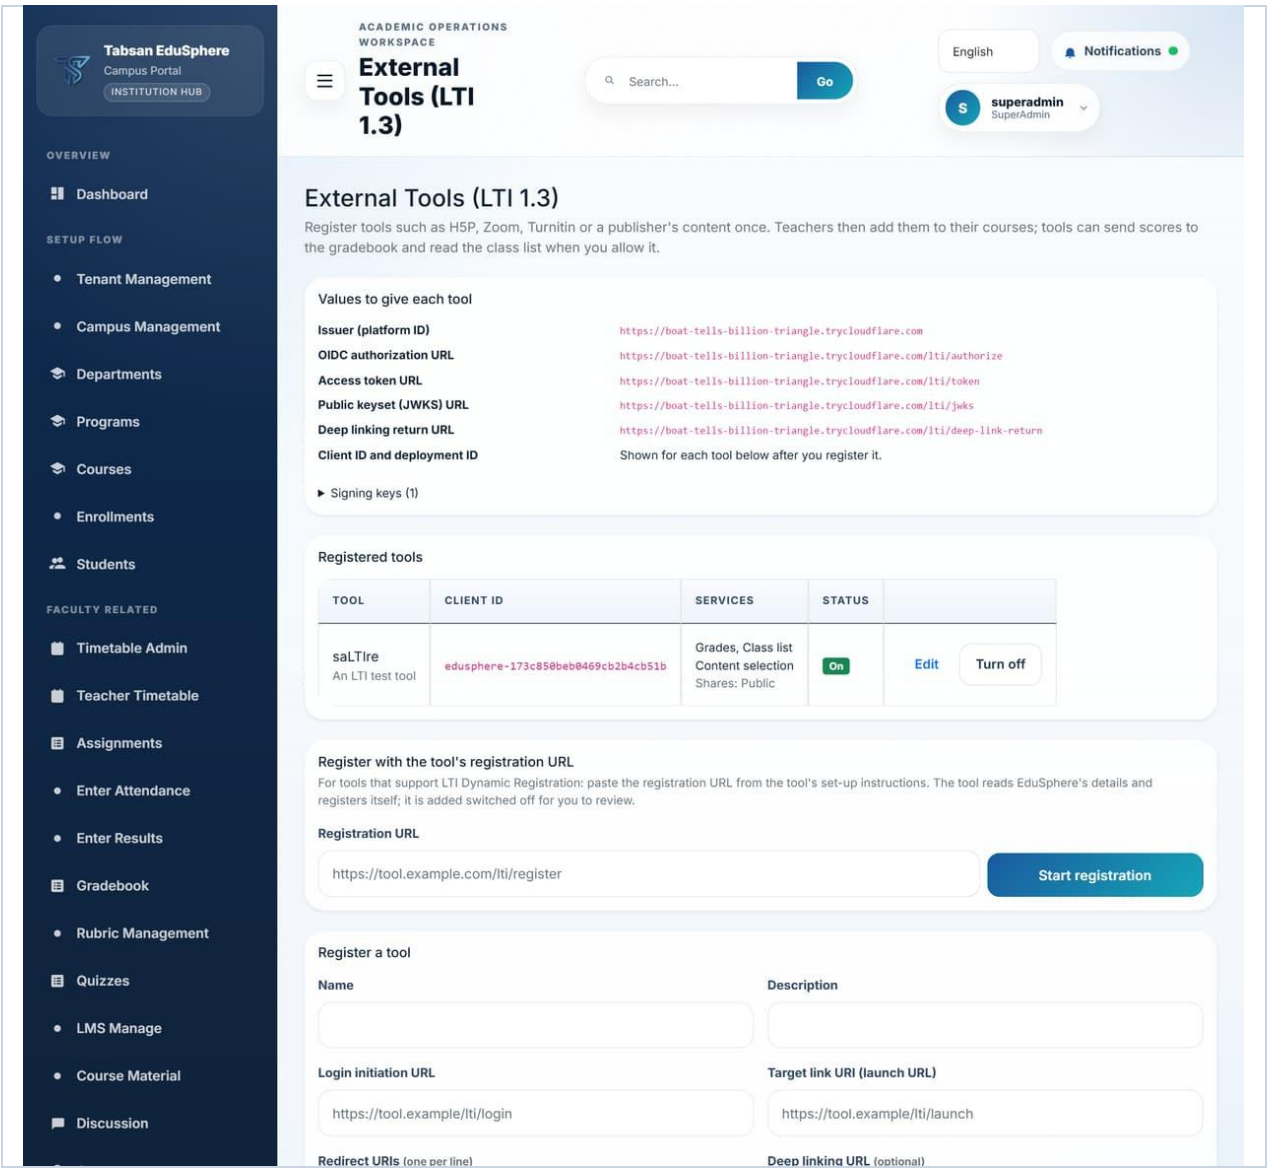

Figure 16.3 *External Tools: platform details and registered tools*

Good to know

- Choose the least personal data a tool needs (Nothing, Name, Email, or Name and email).

© 2026 Tabsan Nexora. All rights reserved.

- Only a SuperAdmin can rotate the platform's signing key; the previous key stays published for a while so tools keep working.
- Step-by-step instructions are in the LTI Tool Setup Guide.

16.3 Similarity Checking

Available to: SuperAdmin (Admins when granted)

Similarity Checking chooses the checker used when teachers switch on similarity checks for an assignment (Chapter 8). The **built-in comparison** needs no account and compares work with the same assignment, every assignment of the course, or the whole institution. **Copyleaks** also checks web pages and publications.

Procedure

1. Open **Similarity Checking**, choose the provider and, for the built-in checker, what work to compare with.
2. For Copyleaks, enter the account email and API key, optionally tick **Sandbox**, and click **Test connection**.
3. Click **Save**. A SuperAdmin can also set the **installation default** for institutions without their own settings.

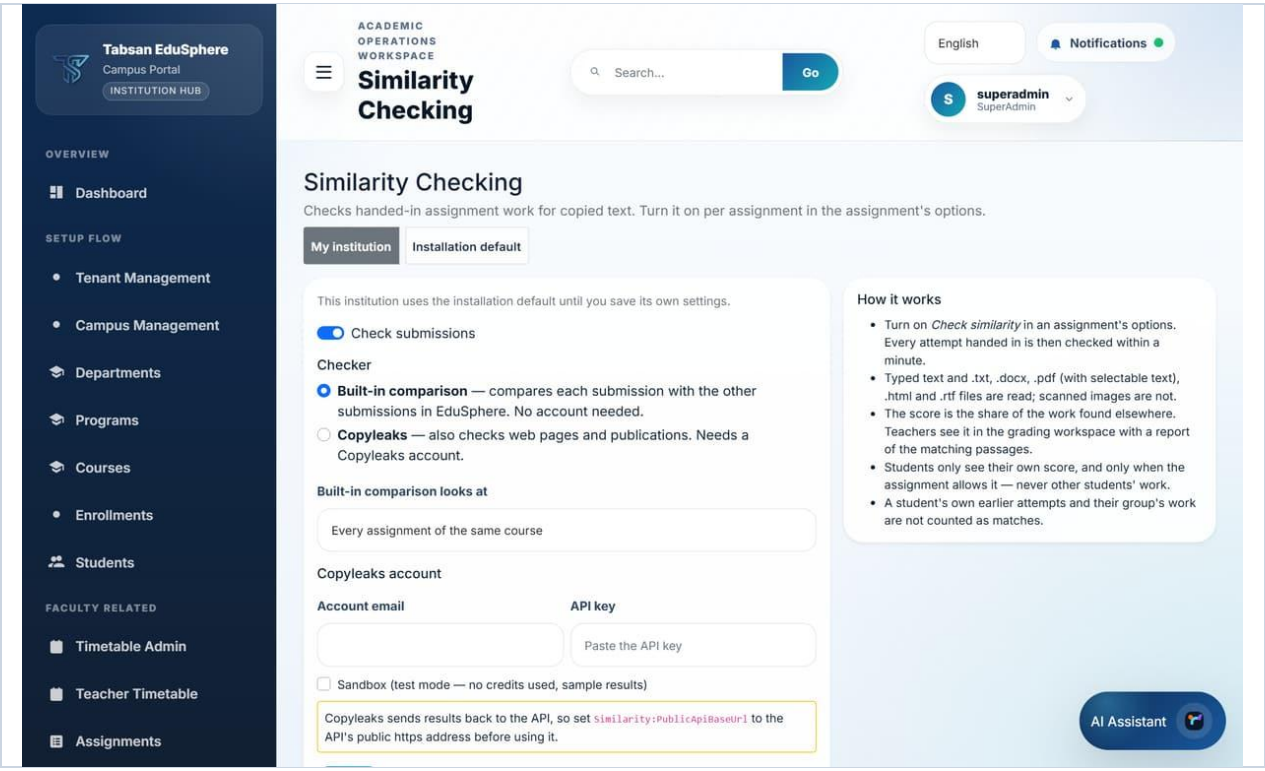

Figure 16.4 *Similarity Checking settings*

16.4 Live Class Settings

Available to: SuperAdmin (Admins when granted)

Live Class Settings chooses how live classes (Chapter 7) are held.

© 2026 Tabsan Nexora. All rights reserved.

- **Meeting links only** – teachers paste a link for each class; nothing to connect.
- **BigBlueButton** – the API address and the shared secret of your BigBlueButton server.
- **Zoom** – a Server-to-Server OAuth app: account ID, client ID and client secret. Zoom reports how long each participant stayed, for attendance.
- **Microsoft Teams** – an Entra app (tenant ID, client ID and secret) with permission to create online meetings, and the organiser's user ID.
- Set how many minutes before the start students may join, click **Save**, then **Test connection**.

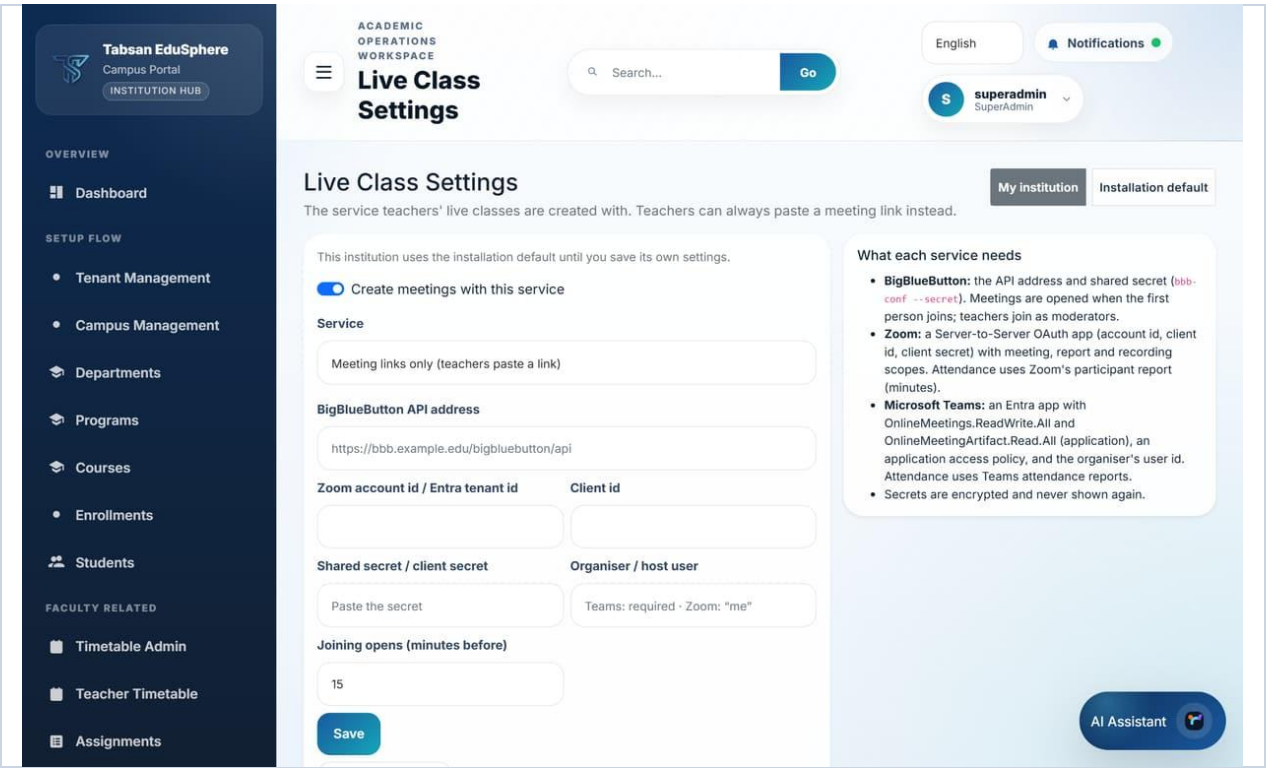

Figure 16.5 *Live Class Settings*

16.5 Language & Translations

Available to: SuperAdmin

Language & Translations sets the default language (English, Urdu, Arabic, or the browser's language) used for people who have not chosen one, on the sign-in page and for emails to them. Everyone can still switch languages from the top bar.

It also shows how many texts are translated for each language, and lets your institution improve the translations.

Procedure

1. Choose the **Default language** and click **Save**.
2. Click **Export to Excel**. The workbook has one row per English text with an Urdu and an Arabic column (and where each text is used).
3. A translator fills in or corrects the language columns, keeping placeholders such as {0} and {1} unchanged.

© 2026 Tabsan Nexora. All rights reserved.

4. Choose the workbook under **Translated workbook (.xlsx)** and click **Import**. Only changed texts are stored, and the portal uses them at once.

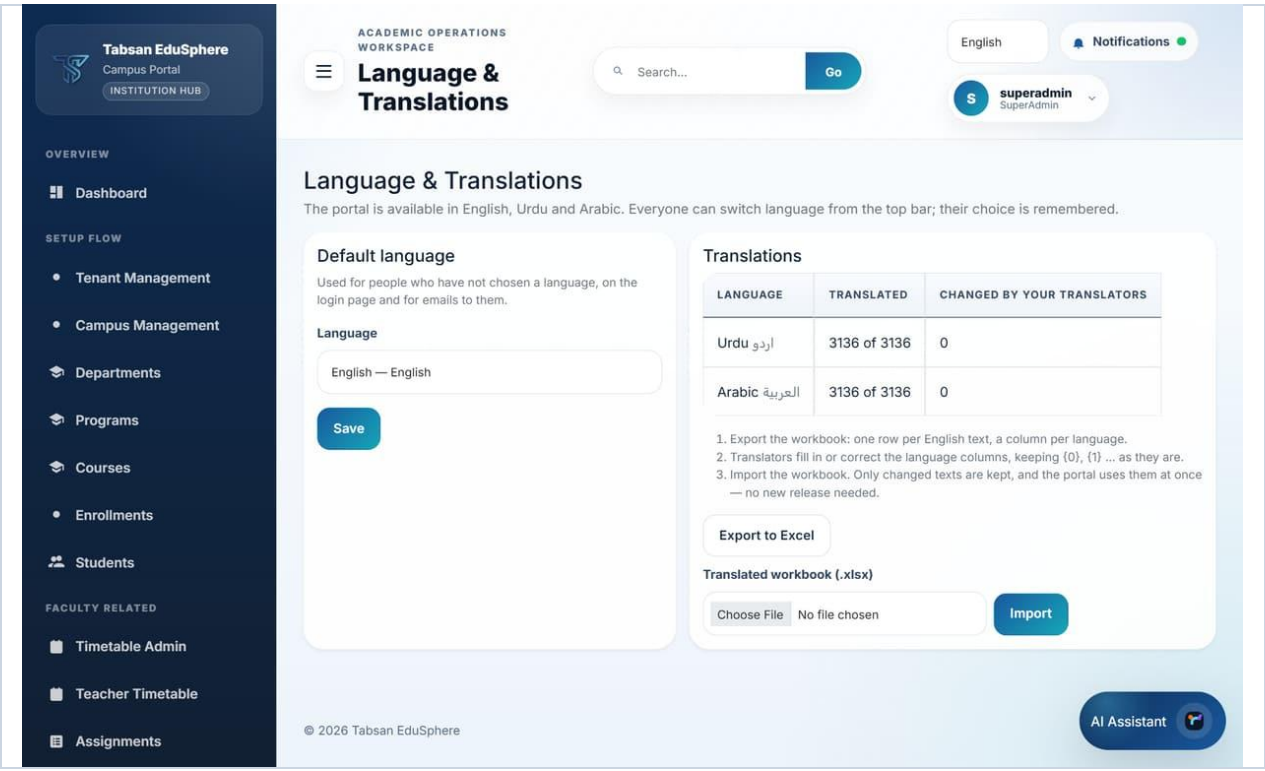

Figure 16.6 *Language & Translations*

16.6 Learning Record Store (xAPI)

Available to: SuperAdmin (Admins when granted)

EduSphere includes a Learning Record Store for xAPI (Experience API). Activities and authoring tools that report xAPI statements, for example courses published from Articulate Rise or Storyline with xAPI tracking, can send their records to EduSphere.

Procedure

1. Open **Learning Record Store**.
2. Create credentials for each activity provider: enter a name and, optionally, the course its statements belong to. The key and secret are shown once; enter them, with the endpoint shown on the page, in the activity.
3. Switch credentials off to stop an activity from sending statements. The latest statements received are listed at the bottom of the page.

17 Troubleshooting and FAQ

17.1 Signing in and accounts

Problem	What to do
I cannot sign in.	Check the username and that Caps Lock is off. If you have forgotten your password, ask an Admin to reset it from User Settings.
I am asked to change my password.	This happens at first sign-in and when your password expires (every 90 days by default). Choose a new password of at least 8 characters.
I was signed out unexpectedly.	Sessions end after a period of inactivity. Sign in again; save your work regularly on long forms.
I lost my authenticator device.	Use one of your recovery codes to sign in, or ask an administrator to reset two-factor authentication.
A new student cannot see their courses.	Check that the student was created with a Program (so a student profile exists) and has been enrolled in the term's offerings.
"This account is not linked to an EduSphere user" after single sign-on.	EduSphere could not match the institution account by verified email or institution ID. Sign in once with your username and password, or ask an administrator to check your email or registration number, or the provider's linking options.
"Your identity provider reports a role that does not match this EduSphere account".	The provider's role or affiliation for you does not map to your EduSphere role. An administrator can check the role mappings in Single Sign-On; the audit log shows the values the provider sent.
Single sign-on fails with a general message.	An administrator should check the audit log (SsoLoginFailed) for the reason, for example an expired certificate, an unencrypted assertion when encryption is required, or a wrong client secret, and use Test connection on the Single Sign-On page.
The SSO button does not appear on the sign-in page.	Tenant providers appear only on the sign-in address ending in ?tenant= and your tenant code. Check also that the provider is switched on.

17.2 Online learning

Problem	What to do
A module or item shows a lock.	The lock shows why: an opening date, a module that must be completed first, or an earlier item in an "in order" module. Complete what it asks, or ask your teacher.
I cannot find my course modules.	Open Course Content, choose the course in the Course box and click Open. Only published modules and items appear.
A quiz says the access code is needed or the network is not allowed.	Ask your teacher for the access code. Quizzes limited to campus networks can only be started from those networks.
My quiz score shows as pending.	Some answers (essays, short answers or files) are marked by the teacher. The total appears when they are marked.

© 2026 Tabsan Nexora. All rights reserved.

Problem	What to do
A SCORM package does not save my progress.	Leave the package with Exit on the player page, not by closing the tab. If the package still starts from the beginning, tell your teacher; some packages do not save a resume point.
A part of a SCORM package is locked, or Next says it is not available yet.	The package sets its own order. Finish or pass the part that is open first; point at the locked part to see what it is waiting for.
The SCORM player says "You have reached the end of this package".	The package has nothing more to open and your result is saved. Open the package page to see it, and start a new attempt if more are allowed.
I cannot join a live class.	Join opens 15 minutes before the start. If the class uses a meeting link, the link opens the meeting service in a new tab; allow pop-ups for the portal.
An external tool shows a blank frame or "launch expired".	Go back to the course and click Open again. If the frame stays blank, ask your teacher to set the tool to open in a new tab.
Notifications do not reach my phone.	Turn them on under Notifications > Notifications on this device and allow them when the browser asks. On iPhone, open EduSphere from its Home Screen icon. Signing out stops notifications on that device.
Similarity score is 0% for the first submissions.	There was nothing to compare with yet. Use Check again in the grading workspace after other students have handed in.

17.3 Pages and data

Problem	What to do
I was returned to the Helpdesk with a message.	The page is not available to your role. The message explains why. Ask your administrator if you need access.
A list is empty.	Check the filters at the top of the page. Most pages need a department, course or offering selected first.
Save buttons return "read-only mode".	The license is missing or expired. A SuperAdmin must upload a valid license in License Update.
A student cannot enrol in a course.	The enrollment summary on the Enrollments page gives the reason for each student: an unmet prerequisite, a timetable clash, a closed course or semester, or a student from another institute. A full course puts the student on the waitlist instead.
Results are not visible to students.	Results appear only after the teacher clicks Publish All in Enter Results.
A student cannot apply for graduation.	Only active University students in their final semester with a completed FYP can apply. Check Degree Audit for unmet requirements.
Degree Audit says no degree rule is configured.	A SuperAdmin must create a degree rule for the student's program in Degree Rules.
A report has no export buttons.	Choose all required filters and click Filter first; some reports need a semester or a student.
Exported files do not open.	Make sure the download finished. CSV files open in Excel; PDF files need a PDF reader.

17.4 Getting more help

If your question is not answered here, raise a ticket in **Helpdesk** with the Technical category, describing what you were doing and what you saw. Include the page name and, if possible, a screenshot. Your administrator can also check the audit log to see exactly what happened.

Appendix A Menu Access by Role

The table lists every sidebar menu and the roles that see it with the default settings. SuperAdmin can change Admin, Faculty and Student visibility in Sidebar Settings. Admin access was captured with the testadmin account.

Appendix B Glossary

Term	Meaning
CGPA	Cumulative Grade Point Average across all completed semesters.
Course outcome (CLO)	A learning outcome of one course, usually contributing to one or more program outcomes.
Course offering	A course taught in a specific semester or class, usually by one faculty member. Students enrol in offerings.
Degree rule	The credit and GPA requirements a University program must meet before a student can graduate.
External tool (LTI)	Another learning application opened from a course without a second sign-in, using the LTI 1.3 standard; it can send grades back.
FYP	Final Year Project – the capstone project of a University program.
Institution type	University, College or School. Departments, grading and progression follow the institution type.
Grading workspace	The page where teachers mark submissions one after another, with annotations, rubric, comments and similarity score.
Level	A semester (University) or class (School and College) within a program.
License (.tablic)	The encrypted, signed file that activates the portal and sets its expiry date.
Live class	A scheduled online class with a join link; joining through the portal can record attendance.
Mastery	How well a student's graded work shows they can do what a learning outcome describes.
Module (course)	A unit of a course, usually a week or topic, holding items in order with completion requirements.
Module (feature)	A feature area (for example Attendance or Reports) that SuperAdmin can activate or deactivate.
Peer review	Students review a number of classmates' submissions, usually anonymously, with a rubric or a score.
Prerequisite	A course a student must pass before enrolling in another course.
Program outcome (PLO)	A learning outcome of an academic program, reported as program attainment for accreditation.
Question bank	A reusable pool of quiz questions from which quizzes can draw random questions.
Read-only mode	The state in which the portal allows viewing but blocks changes, used when the license is not valid.
SCORM package	An interactive lesson exported from an authoring tool as a zip file, played in the portal with progress and score recorded.
Similarity score	The share of a submission that matches other work, from 0% to 100%.

© 2026 Tabsan Nexora. All rights reserved.

Term	Meaning
Single sign-on (SSO)	Signing in with the institution's own account (Microsoft, Google, OpenID Connect or SAML 2.0) instead of an EduSphere password.
Tenant	A separate institution in the installation with its own campuses, departments, users and data.
Two-factor authentication (2FA)	A second sign-in step using a 6-digit code from an authenticator app.
xAPI	The Experience API: a standard way for learning activities to report what learners did to a Learning Record Store.
